He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political

and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2

where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by

Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). .As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social

media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts or new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. And he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of

Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses

would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field emphasizing that authenticity must be perceived by followers to be effective. . Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it \nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance Donald Trump despite his controversial beliefs and behaviors is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the

content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research

in the literature review. With these chapters and any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.]\n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social mMedia and fFake nNews in the 2016 eElection. The overarching goal of this project is to foster a more mindful engagement with social media, enhancing users' awareness of its influence and encouraging responsible consumption. The importance of this change lies in its potential to equip individuals with the necessary skills to critically evaluate the intent behind social media content, fostering a more informed and discerning public.\n\n**Theoretical Foundation for Mindfulness** \nMindfulness in the context of social media involves being aware of the motives behind content creation and being present in the analysis of its potential impacts. Studies indicate that mindfulness practices can significantly improve cognitive focus and emotional regulation, which are critical in resisting manipulative content and engaging constructively online (Gardner et al., 2005; Mehmood et al., 2016). By integrating mindfulness into social media consumption, users can develop a heightened sense of agency and responsibility towards the content they share and interact with.\n\n### Implementation\n\n**Development of a Mindfulness-Oriented Platform** \nTo operationalize this solution, a dedicated website will be developed, serving as a hub for resources and training on mindful social media use. The platform will feature several key components:\n\n- **Educational Content:** A series of webinars and interactive tutorials designed to teach users about the psychological effects of social media and the benefits of mindfulness.\n- **Resource Library:**

Curated content including articles, case studies, and research findings on the impact of social media on society and individual psychology.\n- **Interactive Features:** Tools such as quizzes and self-assessment modules to help users gauge their level of mindful engagement and areas for improvement.\n- **Community Forum:** An online space for users to share experiences, challenges, and strategies for more mindful social media use.\n\n**Materials and Resources** \nThe implementation will utilize a range of materials:\n\n- **Video Tutorials:** Step-by-step guides on practicing mindfulness in daily social media interactions.\n- **Digital Handouts:** Infographics and cheat sheets summarizing key points on mindful social media use.\n- **Training Manuals:** Detailed guides for educators and leaders to facilitate mindfulness training in various settings.\n\n### Project Measurements\n\n**Metrics of Success** \nThe project's success will be measured through several quantitative and qualitative metrics:\n\n- **Website Analytics:** Tracking the number of visitors, page views, and engagement rates to assess the reach and impact of the website.\n- **User Feedback:** Surveys and feedback forms to gather user insights on the effectiveness of the resources and their applicability.\n- **Behavioral Changes:** Long-term studies to track changes in users' social media habits, based on pre- and post-engagement with the platform.\n\n**Assessment Tools** \nGoogle Analytics will be used to monitor website traffic and user engagement. User feedback will be collected through online surveys integrated into the platform, allowing for ongoing adjustments and improvements.\n\n### Conclusion and Transition\n\nThis chapter has outlined a strategic approach to promoting mindfulness in social media engagement through educational resources and community collaboration. By equipping individuals with the tools to critically analyze and engage with social media, this project aims to cultivate a more informed, ethical, and proactive online community. Chapter 5 will reflect on the implementation of these strategies, evaluating their effectiveness and proposing future directions based on the outcomes observed.\n\n### References\n\n- Gardner, W. Social media platforms have become integral to how individuals communicate, receive information, and form opinions. However, the very nature of these platforms, which often prioritize engagement over accuracy, poses significant risks. These include the spread of misinformation, the manipulation of public opinion, and the creation of echo chambers that reinforce pre-existing beliefs rather than fostering open dialogue. According to Allcott and Gentzkow (2017), the 2016 U.S. presidential election highlighted the dangers of misinformation on social media, where false narratives were spread rapidly, impacting voter perceptions and behaviors. This event exemplifies the need for a more critical and informed approach to social media consumption.\n\nThe change proposed in this project is centered around fostering mindfulness in social media engagement. Mindfulness, in this context, refers to the practice of being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and to reflect on how it influences their thoughts and actions. The goal is to move away from passive consumption towards an active, thoughtful engagement that prioritizes authenticity, truthfulness, and constructive dialogue. The importance of this change lies in its potential to mitigate the negative impacts of social media by empowering users to approach content with a critical eye, thereby fostering a more informed and discerning public.\n\nThe urgency of this change is further underscored by the social and psychological implications of social media use. Studies have shown that social media can significantly impact mental health, with platforms like Instagram contributing to body dissatisfaction and low self-esteem among young users (Fardouly et al., 2015). These findings suggest that beyond influencing public opinion, social media also affects individual well-being. By promoting mindful engagement, this project aims not only to enhance critical thinking skills but also to reduce the negative emotional and psychological effects of social media. In doing so, it aligns with the broader goals of promoting mental health and well-being in an increasingly digital world.\n\n**Theoretical Foundation for Mindfulness** \nThe concept of mindfulness, traditionally rooted in Eastern philosophical practices, has gained considerable attention in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. Mindfulness involves being fully present in the moment, maintaining a non-judgmental awareness of one's thoughts, emotions, and surroundings. When applied to social media consumption, mindfulness can serve as a powerful tool for resisting the manipulative and often emotionally charged content that proliferates on these platforms.\n\nResearch by Gardner et al. (2005) underscores the importance of self-awareness and self-regulation as fundamental components of authentic leadership, which can be extended to the context of social media use. Authentic leadership involves being true to oneself and transparent with others, qualities that are also essential for mindful social media engagement. By fostering self-awareness, individuals are better equipped to recognize the intent behind social media content and to engage with it in a way that aligns with their values and ethical standards. This approach can help users navigate the complex digital landscape, where

the lines between authentic and manipulated content are often blurred.\n\nMoreover, mindfulness practices have been shown to improve cognitive focus and emotional regulation, which are critical in resisting the impulsive reactions that social media content often elicits. Mehmood et al. (2016) found that authentic leadership, which shares many principles with mindfulness, positively influences followers' performance by enhancing their learning orientation and self-regulation. This finding is particularly relevant in the context of social media, where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. By encouraging users to approach social media content mindfully, this project aims to promote a more deliberate and thoughtful engagement, reducing the likelihood of such negative outcomes.\n\nThe integration of mindfulness into social media use also aligns with the principles of authentic leadership, which emphasize transparency, ethics, and a focus on the communal good (Northouse, 2019). Authentic leadership, like mindfulness, requires a deep self-awareness and a commitment to ethical behavior, qualities that are essential for responsible social media use. By cultivating these qualities, users can develop a more critical and reflective approach to social media, which not only enhances their own experience but also contributes to a healthier, more constructive digital environment. This approach can help counter the negative effects of social media, such as polarization and the spread of false information, by promoting a more informed and responsible public discourse.\n\nThe theoretical foundation for this project, therefore, rests on the intersection of mindfulness and authentic leadership. Both frameworks emphasize the importance of self-awareness, ethical behavior, and critical thinking\u2014qualities that are increasingly important in the digital age. By applying these principles to social media use, this project seeks to foster a more mindful, ethical, and constructive engagement with digital content. This change is not only necessary but also timely, given the growing concerns about the impact of social media on society and individual well-being.\n\nIn conclusion, the rationale for promoting mindfulness in social media engagement is clear. The pervasive influence of social media on societal norms and individual behaviors necessitates a critical approach to its consumption. By integrating mindfulness into social media use, this project aims to empower users with the tools they need to navigate the digital landscape responsibly. The theoretical foundation for this approach, rooted in mindfulness and authentic leadership, provides a robust framework for understanding and addressing the challenges of social media. This change is essential for fostering a more informed, ethical, and constructive digital environment, which is crucial for the well-being of both individuals and society as a whole.\n\n---\n\nThis expanded narrative provides a more in-depth discussion of the rationale for change and the theoretical foundation of the proposed solution. It integrates sources referenced in your attachment, adding greater context and depth to the analysis while maintaining a cohesive, essay-style format.”]}, "status": "finished_successfully","end_turn": true, "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-bo0FiWLY7", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAA", "parent_id": "9593ec19-9d5d-42e3-88a5-309cb9118da4", "request_id": "8b90fe282e765274-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "9593ec19-9d5d-42e3-88a5-309cb9118da4", "children": ["aaa222d3-3a77-4f61-a80f-7e7d4d307ca7"]}, "aaa222d3-3a77-4f61-a80f-7e7d4d307ca7": {"id": "aaa222d3-3a77-4f61-a80f-7e7d4d307ca7", "message": {"id": "aaa222d3-3a77-4f61-a80f-7e7d4d307ca7", "author": {"role": "user", "name": null,

The importance of this change lies in its potential to equip individuals with the necessary skills to critically evaluate the intent behind social media content, fostering a more informed and discerning public.\n\n**Theoretical Foundation for Mindfulness** \nMindfulness in the context of social media involves being aware of the motives behind content creation and being present in the analysis of its potential impacts. Studies indicate that mindfulness practices can significantly improve cognitive focus and emotional regulation, which are critical in resisting manipulative content and engaging constructively online (Gardner et al., 2005; Mehmood et al., 2016). By integrating mindfulness into social media consumption, users can develop a heightened sense of agency and responsibility towards the content they share and interact with.", "request_id": "8b9109e80ca1ba91-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "15be3b8c-91f5-4afb-9304-28b49443949e", "children": ["125ce594-0769-45d5-bf47-306a17f9e378"]}, "125ce594-0769-45d5-bf47-306a17f9e378": {"id": "125ce594-0769-45d5-bf47-306a17f9e378", "message": {"id": "125ce594-0769-45d5-bf47-306a17f9e378", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1724646125.301283, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b9109e80ca1ba91-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null, "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa222d3-3a77-4f61-a80f-7e7d4d307ca7", "children": ["b3ca3116-51ec-4a42-86f5-ff1b8b895b43"]}, "b3ca3116-51ec-4a42-86f5-ff1b8b895b43": {"id": "b3ca3116-51ec-4a42-86f5-ff1b8b895b43", "message": {"id": "b3ca3116-51ec-4a42-86f5-ff1b8b895b43", "author": {"role": "tool", "name": "myfiles_browser", "metadata": {}}, "create_time": 1724646135.477427, "update_time": null, "content": {"content_type": "tether_quote", "url": "file-be68doRUH2w1dPU7cPLqK2Lo", "domain": "Capstone Templated Project (3) (1) graded final befor.docx", "text": "From Tweets to Change: Social Media's Role in Contemporary Leadership\nAlexis Lindsay\nClaremont Lincoln University\n\n\n\nA Capstone Action Project\nSubmitted to Claremont Lincoln University\nin Partial Fulfillment of the Requirements for the\u00a0\nM.A. Organizational Leadership \u2013 Professional Studies\nClaremont CA\n\u00a0\n\nTable of Contents\n\t[List each chapter and major

(This is the ONLY section where first person can be used.)\n\u00a0\n\t\t\n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election

false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage

in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of

social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). .As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts or new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. And he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be

repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how

authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its

straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field emphasizing that authenticity must be perceived by followers to be effective. . Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it \nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance Donald Trump despite his controversial beliefs and behaviors is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in

using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research in the literature review. With these chapters and any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.]\n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure

successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social mMedia and fFake nNews in the 2016 eElection. Social media platforms such as Facebook, Instagram, Twitter, and TikTok have become integral to the daily lives of millions, if not billions, of people worldwide. These platforms have significantly altered how individuals communicate, receive information, and form opinions. As highlighted in Chapter 1, the widespread use of social media, where 72% of the U.S. public actively engages, underscores its profound impact on social, political, and community engagement (Auxier & Anderson, 2021). However, this extensive reach comes with significant risks, including the spread of misinformation, manipulation of public opinion, and creation of echo chambers that reinforce pre-existing beliefs rather than fostering open dialogue. The dangers posed by these risks were starkly illustrated during the 2016 U.S. presidential election, where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow, 2017).\n\nGiven these concerns, the change proposed in this project centers around fostering a more mindful engagement with social media. Mindfulness, in this context, refers to the practice of being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and to reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption of social media content to an active, thoughtful engagement that prioritizes authenticity, truthfulness, and constructive dialogue. This shift is crucial in mitigating the negative impacts of social media by empowering users to approach content with a critical eye, thereby fostering a more informed and discerning public.\n\nThe necessity of this change is further emphasized by the social and psychological implications of social media use. Research has demonstrated that social media can have significant effects on mental health, particularly among young users. For instance, studies have shown that platforms like Instagram contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al., 2015). These findings indicate that beyond influencing public opinion, social media also affects individual well-being, making it imperative to promote a more mindful approach to its use. By encouraging mindfulness, this project aims not only to enhance critical thinking skills but also to reduce the negative emotional and psychological effects associated with social media. This aligns with the broader goals of promoting mental health and well-being in an increasingly digital world.\n\n**Theoretical Foundation for Mindfulness**\n\nMindfulness, traditionally rooted in Eastern philosophical practices, has garnered significant

attention in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. At its core, mindfulness involves being fully present in the moment, maintaining a non-judgmental awareness of one's thoughts, emotions, and surroundings. When applied to social media consumption, mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This is particularly important in a digital landscape where content is designed to evoke quick reactions, often bypassing critical thought.\n\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership. Gardner et al. (2005) emphasize that self-awareness and self-regulation are fundamental components of authentic leadership. These elements are equally critical when applied to social media engagement. Authentic leadership, much like mindfulness, involves being true to oneself and maintaining transparency with others. By fostering self-awareness, individuals can better recognize the intent behind social media content and engage with it in a manner that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively, where the distinction between authentic and manipulated content is often obscured.\n\nMoreover, mindfulness practices have been shown to enhance cognitive focus and emotional regulation, which are vital in resisting the impulsive reactions that social media content frequently elicits. Mehmood et al. (2016) found that authentic leadership, which shares many principles with mindfulness, positively influences followers' performance by enhancing their learning orientation and self-regulation. This finding is particularly relevant in the context of social media, where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. By encouraging users to approach social media content mindfully, this project seeks to promote a more deliberate and thoughtful engagement, reducing the likelihood of such negative outcomes.\n\nThe integration of mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being, as emphasized by authentic leadership principles. Authentic leadership requires a deep commitment to ethical behavior and a focus on the communal good (Northouse, 2019). These qualities are essential for responsible social media use. By cultivating these traits through mindfulness, users can develop a more critical and reflective approach to social media, which not only enhances their own experience but also contributes to a healthier, more constructive digital environment. This approach is critical in countering the negative effects of social media, such as polarization and the spread of false information, by promoting a more informed and responsible public discourse.\n\nIn conclusion, the theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media on societal norms and individual behaviors necessitates a critical approach to its consumption. By integrating mindfulness into social media use, this project aims to empower users with the tools needed to navigate the digital landscape responsibly. This approach is grounded in the principles of mindfulness and authentic leadership, both of which emphasize the importance of self-awareness, ethical behavior, and critical thinking. These qualities are increasingly important in the digital age, making this change not only necessary but also timely. The proposed solution is essential for fostering a more informed, ethical, and constructive digital environment, which is crucial for the well-being of both individuals and society as a whole."]}, "status": "finished_successfully","end_turn": true

digital age. Platforms such as Facebook, Instagram, Twitter, and TikTok have become integral to the daily lives of millions, fundamentally altering how individuals communicate, receive information, and form opinions. As highlighted in Chapter 1, the widespread use of social media, with 72% of the U.S. public actively engaging on these platforms, underscores its profound impact on social, political, and community engagement (Auxier & Anderson, 2021). However, this extensive reach also brings significant risks, including the spread of misinformation, manipulation of public opinion, and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election, where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow, 2017).\n\nGiven these concerns, the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness, in this context, involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active, thoughtful engagement that prioritizes authenticity, truthfulness, and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye, thereby fostering a more informed and discerning public.\n\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health, particularly among young users. For instance, platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al., 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being, making it imperative to promote a more mindful approach to its use. By encouraging mindfulness, this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media, aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\n\n**Theoretical Foundation for Mindfulness**\n\nMindfulness, traditionally rooted in Eastern philosophical practices, has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption, mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions, often bypassing critical thought.\n\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership, which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness, individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively, where the distinction between authentic and manipulated content is often blurred.\n\nMindfulness practices also enhance cognitive focus and emotional regulation, which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found, authentic leadership,

which shares many principles with mindfulness, positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media, where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement, reducing the likelihood of negative outcomes.\n\nIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being, as emphasized by authentic leadership principles (Northouse, 2019). By cultivating mindfulness, users can develop a more critical and reflective approach to social media, which not only enhances their own experience but also contributes to a healthier, more constructive digital environment. This approach is crucial for countering the negative effects of social media, such as polarization and the spread of false information, by fostering a more informed and responsible public discourse.\n\nIn conclusion, the theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption, and by integrating mindfulness into social media use, this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership, this approach emphasizes self-awareness, ethical behavior, and critical thinking\u2014qualities that are essential for fostering a more informed, ethical, and constructive digital environment. This change is not only necessary but also timely, given the growing concerns about the impact of social media on individual well-being and societal norms.\n\n---\n\nThis revised version condenses the discussion by merging similar ideas, reducing redundancy while maintaining depth and clarity. The narrative now flows more smoothly, with each paragraph building on the previous one to develop a cohesive argument for the proposed change."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-bo0FiWLY7", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAAAAAAAAAAAAAAA", "parent_id": "aaa24aba-64c9-48df-9aa9-689bcc8895ef", "request_id": "8b91113d2897ba91-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa24aba-64c9-48df-9aa9-689bcc8895ef", "children": ["aaa21ab5-1ad9-47e2-a290-74514af56df8"]}, "aaa21ab5-1ad9-47e2-a290-74514af56df8": {"id": "aaa21ab5-1ad9-47e2-a290-74514af56df8", "message": {"id": "aaa21ab5-1ad9-47e2-a290-74514af56df8", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724646553.855564, "update_time": null, "content": {"content_type": "text", "parts": ["and what kind of the "the authors fiance" statement might fit this chapter?"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"gizmo_id": "g-bo0FiWLY7", "request_id": "8b911452b846ba91-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "ee15d1d1-5415-4667-9f63-ae391b2cc333", "children": ["39e20d6c-a36d-47ef-8dbb-3853ad7da14d"]}, "39e20d6c-a36d-47ef-8dbb-3853ad7da14d": {"id": "39e20d6c-a36d-47ef-8dbb-3853ad7da14d", "message": {"id": "39e20d6c-a36d-47ef-8dbb-3853ad7da14d", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724646567.703741, "update_time": null, "content": {"content_type": "text", "parts": ["Incorporating a personal anecdote, such as "the author's fianc\u00e9," can add a relatable and humanizing touch to the chapter. It can also help illustrate the real-

world relevance of the theoretical concepts being discussed. Here\u2019s how you might integrate a statement about the fianc\u00e9 in a way that fits with the themes of mindfulness and authentic leadership in social media engagement:\n\n---\n\n**Rationale for Change**\n\nThe influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook, Instagram, Twitter, and TikTok have become integral to the daily lives of millions, fundamentally altering how individuals communicate, receive information, and form opinions. As highlighted in Chapter 1, the widespread use of social media, with 72% of the U.S. public actively engaging on these platforms, underscores its profound impact on social, political, and community engagement (Auxier & Anderson, 2021). However, this extensive reach also brings significant risks, including the spread of misinformation, manipulation of public opinion, and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election, where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow, 2017).\n\nThe author's fianc\u00e9, who is highly critical of the content he encounters on social media, often serves as a reminder of the need for a more mindful approach to these platforms. He frequently expresses frustration over how easily people are swayed by sensationalist headlines or emotionally charged posts without questioning the intent behind them. His approach to social media\u2014marked by skepticism and a deliberate effort to seek out reliable information\u2014exemplifies the kind of mindful engagement this project seeks to promote. By adopting a similar mindset, users can become more aware of the underlying motivations in the content they consume, enabling them to engage more thoughtfully and responsibly with social media.\n\nGiven these concerns, the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness, in this context, involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active, thoughtful engagement that prioritizes authenticity, truthfulness, and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye, thereby fostering a more informed and discerning public.\n\n---\n\nThis anecdote about the fianc\u00e9 fits naturally into the discussion by providing a real-world example of the mindfulness and critical thinking that the project aims to promote. It ties the theoretical concepts to everyday experiences, making the argument more relatable and concrete."]}, "status": "finished_successfully","end_turn": true

This website will serve as a resource hub, offering educational materials that promote mindfulness in the consumption of social media. At this stage, the website will primarily feature a curated collection of links to various resources. These resources will include articles on the psychological effects of social media, guides on achieving authenticity and mindfulness, and instructional content on mindfulness exercises specifically tailored for social media users.\n\nAdditionally, the website will host a selection of social media posts that exemplify mindful engagement. These posts will demonstrate how users can maintain authenticity and mindfulness in their interactions online, serving as practical examples for visitors to the site.\n\nWhile the initial launch of the website will focus on these resources, plans for future development include the addition of interactive features. A webinar is currently in development, aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\n\nLooking further ahead, the website may expand to include a community forum. This forum will provide a space for users to share experiences, challenges, and strategies related to mindful social media use, fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\n\nBy starting with a focus on educational resources and planning for gradual expansion, this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust, which is essential for fostering a community committed to mindful social media engagement."]}, "status": "finished_successfully","end_turn": true

However, little is known about the effects of mindfulness on consumers in these representative online settings. In one study (1a and 1b) the

research utilises two types of data to explore how a contemplative practice such as mindfulness influences online behaviour. Specifically, consumers who have completed a 60-day online meditation challenge showed an increase (vs. decrease) in original tweets (vs. retweets) (study 1a), and further, consumers who completed the challenge (vs. did not complete) showed higher (vs. lower) positive sentiment of original tweets. Despite some research showing engagement in social media as maladaptive, we provide a positive and unexpected contribution to show that mindfulness has a positive effect on how consumers may engage with social media. Further, we contribute a novel research method based on Twitter that advances immediate and unique marketing methods. Finally, we expand the practical application of mindfulness by exploring how consumers are organically, and consequentially, practicing mindfulness in field settings.","paper_authors":["Amy Errmann","Shohil Kishore","S. Lee"],"paper_publish_year":2023,"publication_journal_name":"Australasian Marketing Journal","consensus_paper_details_url":"https://consensus.app/papers/positively-effects-mindfulness-social-media-tweets-errmann/f288f55acd6451b294a4a1b6744c8d71/?utm_source=chatgpt","doi":"10.1177/14413582231173064","volume":"31","pages":"325 - 331","search_result_number":1},{"paper_title":"Social media diaries and fasts: Educating for digital mindfulness with pre-service teachers","abstract":"Abstract With social media access nearly ubiquitous, teachers and students must explore how to mitigate distractions and unhealthy uses. In this mixed methods study, the authors invited 60 pre-service teachers across two universities to cultivate mindfulness around social media beliefs, habits, and behaviors by completing a social media survey, diary, and fast. Participants identified reasons for regular social media use, including unconscious impulses, and made new realizations about what is gained and lost in social media engagements. Participants were optimistic about teaching similar lessons. The authors recommend pedagogical guidelines for social media mindfulness that allow for complexity, variance, and idiosyncrasy.","paper_authors":["N. Damico","Daniel G. Krutka"],"paper_publish_year":2018,"publication_journal_name":"Teaching and Teacher Education","consensus_paper_details_url":"https://consensus.app/papers/media-diaries-fasts-educating-mindfulness-preservice-damico/c2fde9255d5155798ec787f884ac8fc3/?utm_source=chatgpt","doi":"10.1016/J.TATE.2018.03.009","volume":"","pages":"","search_result_number":2},{"paper_title":"Mindfully Experimenting with IT: Cases on Corporate Social Media Introduction","abstract":"In many companies the process of new Information Technology (IT) identification and assessment lacks the rigor associated with experimentation. The realities of maintaining daily operations and the expense and expertise involved distract firms from conducting experiments. The authors explore cases of how companies introduce a new IT for the business use of digital social media. Because social media technologies are new, interest in its use is broad and diffused leading organizations to be unsure about how best to implement social media, prompting organizations to follow a mindful process of experimenting with these technologies.

The cases illustrate that the extent of mindfulness influences how new technology implementations are introduced, supporting wider boundaries in assessments, richer interpretations of the IT's usefulness, multi-level foci concerning benefits and costs, persistence to continue exploration, and a greater use of fact-based decision-making. The authors observe that following a mindful introduction process reaps some of the benefits of experimentation, such as greater stakeholder satisfaction and organization-wide learning and understanding of the technology's potential.","paper_authors":["Robin S. Poston","William J. Kettinger"],"paper_publish_year":2014,"publication_journal_name":"J. Online communication forums may yield positive effects, such as increased social capital. However, they can also engender negative feelings such as inadequacy and isolation if misused. When engaging passively on social media, users are not engaging in active communication with other users; instead, they are mindlessly viewing others\u2019 profiles, which could lead to upward social comparison and the fear of missing out (FOMO). These effects may stymie adolescents\u2019 psychosocial development (identity versus role confusion). Therefore, the authors present a mindfulness-based intervention for clinicians to address problematic adolescent social media use. The goal of the intervention is to use the three axioms of mindfulness to help increase awareness and regulation of social media use. The article also includes a clinical case study and implications for practice.","paper_authors":["J. Weaver","Jacqueline M. Swank"],"paper_publish_year":2019,"publication_journal_name":"Journal of Child and Adolescent Counseling","consensus_paper_details_url":"https://consensus.app/papers/connections-mindfulnessbased-intervention-adolescent-weaver/6e4572092d915057926265fbcec9936e/?utm_source=chatgpt","doi":"10.1080/23727810.2019.1586419","volume":"5","pages":"103 - 112","search_result_number":4},{"paper_title":"Mindfulness and the social media","abstract":"The number of people engaging in and using social media has increased substantially over the past decade. Recent research has also suggested that a minority of individuals appear to be addicted to social media (e.g., socalled \u2018Facebook\u2019 addiction). Another area that has seen substantial growth during the same time period is the use of mindfulness. Following a brief overview of both excessive social media use and the basic concepts relating to what mindfulness is, this paper commentary briefly reviews some of the main issues in these two areas and suggests that mindfulness might be a useful therapeutic intervention that alleviates problems associated with social media use (given that mindfulness has been used successfully in the treatment of other

behavioral addictions such as addictions to gambling and work). Given the few studies carried out on excessive social media usage, it is concluded there is a need for more methodologically robust research exploring the prevalence, aetiology, and correlates of maladaptive social media behaviour.","paper_authors":["E. Shonin","W. Gordon","M. This research aims to investigate the impact of the intensity of social media use at work on three aspects of burnout: emotional exhaustion, depersonalization, and lack of personal accomplishment. Results from partial least squares regression found that mindfulness significantly mediated the relationship between the intensity of social media use at work on emotional exhaustion and lack of personal accomplishment. These findings suggest that using social media during work tends to increase burnout in employees who have a low level of mindfulness, but it lowers burnout in employees who have a high level of mindfulness.","paper_authors":["Peerayuth Charoensukmongkol"],"paper_publish_year":2016,"publication_journal_name":"Journal of Health Psychology","consensus_paper_details_url":"https://consensus.app/papers/facebooking-moderating-role-mindfulness-relationship-charoensukmongkol/78bf2d6388995130b212a99c742b77f2/?utm_source=chatgpt","doi":"10.1177/1359105315569096","volume":"21","pages":"1966 - 1980","search_result_number":6},{"paper_title":"Mindfulness, Compulsive Mobile Social Media Use, and Derived Stress: The Mediating Roles of Self-Esteem and Social Anxiety","abstract":"There is growing concern over the emergence of damaging compulsive use patterns among some users of social networking sites (SNSs), in particular of mobile social media. Although previous studies argue that mindfulness has a protective effect on compulsive behaviors, to date, no study has analyzed the underlying mechanisms by which mindfulness reduces compulsive SNS usage. This study addresses this gap by examining the relationship between mindfulness, self-esteem, social anxiety, compulsive mobile SNS usage, and derived stress in the context of the use of the mobile social media application, WhatsApp\u2122. Mediation analysis supported the roles of self-esteem and social anxiety as mediators of the beneficial (lowering) effect of mindfulness on compulsive mobile SNS usage. Moreover, the results confirmed that compulsive mobile SNS use induces stress and that mindfulness has also lowering effects on stress derived from such compulsive behavior, mediated by the former variables. This research, therefore, provides a process explanation for the beneficial effect of mindfulness on

stress derived from mobile social media use. Further theoretical and practical implications, as well as future research avenues, are discussed.","paper_authors":["Vanessa Apaolaza","Patrick Hartmann","Clare D'souza","Ainhize Gilsanz"],"paper_publish_year":2019,"publication_journal_name":"Cyberpsychology, behavior and social networking","consensus_paper_details_url":"https://consensus.app/papers/mindfulness-compulsive-mobile-social-media-derived-apaolaza/41355184866c5352bcc55a1fb3fdf5a7/?utm_source=chatgpt","doi":"10.1089/cyber.2018.0681","volume":"22 6","pages":"\\n 388-396\\n ","search_result_number":7},{"paper_title":"Exploring the Concept of Mindfulness in Public Relations Practice","abstract":"Mindfulness, the act of being thoughtfully focused in the present moment, has recently become a common topic of discussion in media and popular culture. Much has been written, documenting the effectiveness of mindfulness in the home and at work. While the concept could have relevant application in the public relations workplace, some might argue its esoteric nature conflicts with appropriate professional standards of practice. Using social order theory as a starting point, this essay presents concepts of mindfulness as presently advanced through popular culture and scholarship. The essay concludes with eight recommendations for applying mindfulness precepts in PR practice in ways that would not put practitioners at odds with marketplace expectations.","paper_authors":["D. People during work manage fluctuating priorities, working with increased expectations, balancing competing demands for our personal and professional goals and handling ongoing conflict and ambiguity in complex environments. Consulting firm AON Hewitt estimates that over 35 percent of US employers in 2013 offered stress reduction programs to their employees and that estimate is expected to grow (AON Hewitt,2013). HR and talent management professionals increasingly looking for ways to reduce employee stress and many employers like google, General mills- have found that introducing mindfulness into their workplace not only lowers employee stress, but improve focus, clarity of thinking, decision making, emotional intelligence andmore.What Mindfulness Is?...inhabiting this moment, our only moment, with greater awareness shapes the moment that follows, and if we can sustain it, actually shapes the future and the quality of our lives and relationships in ways we often simply do not appreciate... Jon Kabat-Zinn (1990, p. XXVIII)Mindfulness has its origin that go back 2,500 years and uses an anchor- often breathing-to centre attention and to bring awareness to the present moment (Stone,2014). According to Frances Weaver in The Week, \\"the goal of mindfulness practice is to \\"quiet the mind's constant chattering-thoughts, anxieties and regrets,\\". Mindfulness practitioners learn to focus on the present in everything they do and to accept events in the presentmoment (Weaver,2014).Psychologist ElaAmarie of the Switzerland based consultancy Mindful Brain observes that there are three characteristics of mindfulness; intention, attention, and attitude. The goal of mindfulness is to recognize and accept inner thoughts and feelings.Mindfulness is a quality of consciousness, more specifically defined as \\"paying attention in a particular way: on purpose, in the presentmoment, nonjudgmentally\\" (Kabat-Zinn, 1994, p. 4).Mindfulness entails self-regulation of attention so that attention is concentrated on the present (Bishop et al., 2004). One's attention remains focused on the \\"unfolding of experience moment by moment\\" (Kabat-Zinn, 2003, p. 145). Thoughts, feelings, andbodily sensations are considered to be \\"objects of observation\\" (Bishop et al., 2004, p. 232) but not something on which one should elaborate (i.e., direct attention toward thinking about the thought, feeling, or sensation). Such elaboration would take one out of the present moment, and thus, distract focus from the current experience. It would also require use of resources that could be devoted to attention and present-moment awareness. In addition, elaboration often involves judgment (e.g., this is a \\"good\\" event or this is a \\"bad\\" experience because of how it is making me think or feel). Mindful awareness is fostered by acting as an \\"impartial witness\\" (KabatZinn, 1990, p. 33) to one's own experience. This means stepping back from one's tendency to categorize and judge one's experiences, a practice which \\"locks us into mechanical reactions\\" (Kabat-Zinn, 1990, p. 33) of which we may not even be aware. The nonjudgmental quality of mindfulness leads to equanimity, as emotional disturbance often comes from our interpretation of the event rather than the event itself (McCormick, 2006). Mindfulness also encourages one to realize that the thoughts,

feelings, and sensations that one observes are simply experiences in the mind or body, and not something that one should \\"over-identify\\" with (e.g., A thought is a thought, but you are not your thought). Mindfulness also involves one's orientation to experience (Bishop et ah, 2004). Mindfulness encourages approaching one's experiences with a \\"beginner's mind\\" (Kabat-Zinn, 1990, pp. 35-36), as if experiencing the event for the first time. \u2026","paper_authors":["Arvind K. Birdie"],"paper_publish_year":2015,"publication_journal_name":"Indian journal of positive psychology","consensus_paper_details_url":"https://consensus.app/papers/mindfulness-role-workplace-birdie/329deea554525f818c9181c4d36bfd8f/?utm_source=chatgpt","doi":"","volume":"6","pages":"432","search_result_number":10},{"paper_title":"The moderating effect of mindlessness/mindfulness upon media richness and social influence explanations of organizational media use","abstract":"Although media use receives considerable attention from organizational communication scholars, empirical data fails to provide clear support for the predominant theoretical models (media richness and social influence). This study presents the construct of mindlessness/mindfulness as a factor that may moderate the relationship between variables from existing theory and media use behavior. Building upon the rationale that organizational tasks often require frequent and repetitive use of communication media, the study depicts media use as accomplished through primarily mindful (i.e., active consideration of one's media options) or mindless (i.e., overlearned behavior) processes. Two data sets from a field experiment revealed that neglecting to consider participant's degree of mindlessness/mindfulness renders existing media selection theory constructs non-predictive. However, the relationships between variables from media selection theory and media use were significantly greater when participants were in the mindful condition, indicating that mindlessness/mindfulness may moderate relationships between theoretical constructs and media use. This finding provides a means for reconciling differences that exist between various theoretical views and the data that have emerged from empirical testing.","paper_authors":["C. Navigating and negotiating life and work in academia.","abstract":"In this chapter, I unpack my use of social networks (and social media) as a means of being more mindful about the role of research and scholarship in the construction of my academic identity. I have found it to be a restless, shifting identity that has to be carefully and continually navigated and negotiated. On the one hand, I explain how participation in social networks has actively shaped my sense of academic community and also the scholarly relationships that contribute strongly to my academic health and well-being. On the other hand, I question the extent to which social networking and the use of social media in academia allow truly mindful practices to be enacted. For example, I sometimes worry that social networking for academic purposes through social media contributes to the acceleration of higher education practice\u2014never switching off, always being connected\u2014potentially further exacerbating academics\u2019 levels of labour, stress and pressure. By reflecting upon and analysing my scholarly use of Twitter and Instagram, I explore how this practice (usually) keeps me acting mindfully as an academic and evaluate the extent to which it enables me to engage better in the complex cognitive and emotional demands of working in higher education. Finally, I reflect upon my recent change of both role and institution, which saw me unexpectedly and temporarily suspend my regular use of social media for academic purposes.","paper_authors":["Katy Vigurs"],"paper_publish_year":2018,"publication_journal_name":"","consensus_paper_details_url":"https://consensus.app/papers/networks-navigating-negotiating-life-work-academia-vigurs/6982759db8005e12bc36ce338efca034/?utm_source=chatgpt","doi":"10.1007/978-981-13-2143-6_4","volume":"","pages":"59-70","search_result_number":13},{"paper_title":"Social Media Addiction, Culture Code and Mediation Effect of Mindfulness: A Structural Equation Modelling Access","abstract":"This study has been initiated with a view to understand the social media addiction and its influence on culture codes a mediation effect of mindfulness. The social media addiction would be a very common problem in the social and the organizational set up. The employees are getting distracted easily because of social media addiction. The organisations are taking much action to rectify this problem but end up with the talent lose because the employees are ready to quit the job when they are not allowed to use social media in the organisation. It has been an inevitable problem for the organisations so many techniques have been initiated in order to solve this problem. Many studies are concentrating on mindfulness which is a tool to remove the distractions and to be a focused employee in the organisation. The social media addiction many a times create a

toxic culture among the employees. It needs a high attention to be cured. The employee relationship are highly under stake when they are social media addict. This study would attempt to understand the empirical evidence on this relationship by examining the association among addiction in social media and its effect on culture code and mediating role of mindfulness. This study also concentrates on the moderating role of gender on the proposed model.","paper_authors":[],"paper_publish_year":2019,"publication_journal_name":"International Journal of Recent Technology and Engineering","consensus_paper_details_url":"https://consensus.app/papers/media-addiction-culture-code-mediation-effect/221d5ff464655d259bf42a5a23f856c1/?utm_source=chatgpt","doi":"10.35940/ijrte.b1205.0782s319","volume":"","pages":"","search_result_number":14},{"paper_title":"Mindfulness in Social Work Education","abstract":"Social work is beginning to explore the role of mindfulness in the education of future practitioners. This article reviews literature from social work education and other disciplines to suggest that there is much that is yet to be explored about mindfulness, its contribution, and the experience and implementation of it into the educational experience. I conclude with some reflections on areas requiring further attention and investigation in the role and teaching of mindfulness in social work education.","paper_authors":["Robyn Lynn"],"paper_publish_year":2010,"publication_journal_name":"Social Work Education","consensus_paper_details_url":"https://consensus.app/papers/mindfulness-social-work-education-lynn/d6df5ccf6e5a560ca045e8e0666477ff/?utm_source=chatgpt","doi":"10.1080/02615470902930351","volume":"29","pages":"289 - 304","search_result_number":15},{"paper_title":"Getting Less Likes on Social Media: Mindfulness Ameliorates the Detrimental Effects of Feeling Left Out Online","abstract":"Objectives Many people spend a lot of time on social media every day, but they may sometimes feel left out on these platforms (e.g., getting few likes or comments on their status updates). Researchers have shown that such experience often leads to psychological and behavioral maladjustment. However, relatively little is known about whether individual characteristics such as trait mindfulness may buffer these negative effects. In the current study, we tested the hypothesis that trait mindfulness weakens the effects of feeling left out on social media on different maladjustment outcomes. Methods In this study, participants first completed a well-validated measure to assess their trait mindfulness. By random assignment, participants were then exposed to an experimental manipulation of a social media experience, during which they received either one or five likes from 11 online interaction partners. Finally, their states of psychological distress, negative emotion, hostility, and antisocial tendency were assessed. Results The results showed that trait mindfulness significantly moderated the effects of feeling left out on social media on these maladjustment outcomes. Compared with participants with low trait mindfulness, those with high mindfulness reported lower levels of psychological distress, negative emotion, hostility, and antisocial tendency after they had received little attention on social media. Conclusions These findings highlight the important role of mindfulness in ameliorating the negative outcomes

associated with feeling left out on social
media.","paper_authors":["Kai-Tak Poon","Yufei

nary Investigation of a Mindfulness-Based Intervention for Social Anxiety Disorder
That Integrates Compassion Meditation and Mindful
Exposure.","abstract":"OBJECTIVES\\nThis study evaluated the
feasibility and initial efficacy of a 12-week group mindfulness-based intervention
tailored for persons with social anxiety disorder (MBI-SAD). The intervention includes
elements of the standard mindfulness-based stress reduction program, explicit training
in self-compassion aimed at cultivating a more accepting and kinder stance toward
oneself, and use of exposure procedures to help participants practice responding
mindfully to internal experiences evoked by feared social
situations.\\n\\n\\nMETHODS\\nParticipants were randomly assigned to the MBI-SAD
(n\u2009=\u200921) or a waitlist (WL) (n\u2009=\u200918) control group. Feasibility
was assessed by the number of participants who completed at least 75% of the 12 weekly
group sessions. Primary efficacy outcomes were clinician- and self-rated measures of
social anxiety. Other outcomes included clinician ratings of illness severity and
self-rated depression, social adjustment, mindfulness, and self-
compassion.\\n\\n\\nRESULTS\\nThe MBI-SAD was acceptable and feasible, with 81% of
participants attending at least 75% of sessions. The MBI-SAD fared better than WL in
improving social anxiety symptom severity (p\u2009\u2264\u20090.0001), depression
(p\u2009\u2264\u20090.05), and social adjustment (p\u2009\u2264\u20090.05). The
intervention also enhanced self-compassion (p\u2009\u2264\u20090.05), and facets of
mindfulness (observe and aware; p\u2009\u2264\u2009.05). MBI-SAD treatment gains were
maintained at 3-month follow-up.\\n\\n\\nCONCLUSIONS\\nThese preliminary findings
suggest that an MBI that integrates explicit training in self-compassion and mindful
exposure is a feasible and promising intervention for social anxiety disorder. The
next step is to compare the MBI-SAD to the gold standard of cognitive-behavior therapy
to determine equivalence or noninferiority and to explore mediators and moderators of
treatment outcome.","paper_authors":["D. Koszycki","J.

","search_result_number":17},{"paper_title":"The effect
of mindfulness on online self-presentation, pressure, and addiction on social
media","abstract":"As social media has become more imperative in
daily life, people pay more attention to self-presentation and impression management

on social media, and some have even become psychologically dependent. There is a large group of socially addicted users who continuously strive to improve their online self-presentation. Due to stress and burnout arising from social media addiction, people change their social media behavior. The influence of mindfulness on social behavior cannot be ignored. This study aims to explore coping behaviors and the role of mindfulness for people under social media pressure and social media addiction in China\u2019s special political environment. We found significant differences in self-presentation, social media pressure, and social media addiction among different circles in the Chinese context. Experiments have shown that people\u2019s socially addictive behaviors and abilities to withstand social media pressure are affected by their mindfulness. In addition, the more social media pressure people perceive on social media, the more likely they are to stop using social media and shift to offline interpersonal interactions. However, when there are more offline interpersonal interactions, people\u2019s willingness to return to social media platforms increases.","paper_authors":["Chunhui You","Yang Liu"],"paper_publish_year":2022,"publication_journal_name":"Frontiers in Psychology","consensus_paper_details_url":"https://consensus.app/papers/effect-mindfulness-online-selfpresentation-pressure-you/78c92bb06a73546cb827a619e7c97755/?utm_source=chatgpt","doi":"10.3389/fpsyg.2022.1034495","volume":"13","pages":"","search_result_number":18},{"paper_title":"Mind over Matter: Testing the Efficacy of an Online Randomized Controlled Trial to Reduce Distraction from Smartphone Use","abstract":"Evidence suggests a growing call for the prevention of excessive smartphone and social media use and the ensuing distraction that arises affecting academic achievement and productivity. A ten-day online randomized controlled trial with the use of smartphone apps, engaging participants in mindfulness exercises, self-monitoring and mood tracking, was implemented amongst UK university students (n = 143). Participants were asked to complete online pre- and post-intervention assessments. Results indicated high effect sizes in reduction of smartphone distraction and improvement scores on a number of self-reported secondary psychological outcomes. The intervention was not effective in reducing habitual behaviours, nomophobia, or time spent on social media. Mediation analyses demonstrated that: (i) emotional self-awareness but not mindful attention mediated the relationship between intervention effects and smartphone distraction, and (ii) online vigilance mediated the relationship between smartphone distraction and problematic social media use. The present study provides preliminary evidence of the efficacy of an intervention for decreased smartphone distraction and highlights psychological processes involved in this emergent phenomenon in the smartphone literature. Online interventions may serve as complementary strategies to reduce distraction levels and promote insight into online engagement. More research is required to elucidate the mechanisms of digital distraction and assess its implications in problematic use.","paper_authors":["Melina A. Throuvala","M. These measurements are designed to provide a comprehensive overview of the project's impact and effectiveness, enabling ongoing refinements and enhancements.\n\nThe primary quantitative tool employed will be website analytics. Utilizing Google Analytics, the project will track several indicators including the number of visitors, page views, and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time, adjustments can be made to optimize the website's layout, content, and user interface to better meet the needs of the audience. Furthermore, these metrics will help determine the most and least popular sections of the website, guiding content strategy and development efforts to align with user preferences.\n\nIn addition to website analytics, qualitative feedback from users will play a crucial role in assessing the project's success. Surveys and feedback forms will be integrated directly into the platform, making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of the mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers, offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content, ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\n\nLastly, the project will conduct long-term studies to monitor behavioral changes in users' social media habits. These studies aim to assess the lasting impact of the website's content on user behavior, particularly looking at changes in how individuals engage with social media before and after interacting with the site. Such studies will be instrumental in validating the effectiveness of the mindfulness techniques promoted through the website. By tracking changes in behavior, such as increased mindfulness and reduced impulsive interactions on social media, the project can substantiate the real-world benefits of its offerings.\n\nTogether, these metrics and tools form a robust framework for measuring the success of the project. By combining immediate, actionable data from website analytics with in-depth user feedback and long-term behavioral studies, the project team can continuously improve the website. This ongoing process of measurement and enhancement ensures that the project remains dynamic and responsive to the needs of its users, ultimately fostering a more mindful and intentional social media landscape."]}, "status": "finished_successfully","end_turn": true

These studies aim to assess the lasting impact of the website's content on user behavior, particularly looking at changes in how individuals engage with social media before and after interacting with the site. Such studies will be instrumental in validating the effectiveness of the mindfulness techniques promoted through the website. By tracking changes in behavior, such as increased mindfulness and reduced impulsive interactions on social media, the project can substantiate the real-world benefits of its offerings.", "request_id": "8b91b7bd4aa55264-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "4fdc9e34-718e-40dc-99b4-bb39dbf163e3", "children": ["6c9d1dfc-6377-4993-9846-a4311a84e9e7"]}, "6c9d1dfc-6377-4993-9846-a4311a84e9e7": {"id": "6c9d1dfc-6377-4993-9846-a4311a84e9e7", "message": {"id": "6c9d1dfc-6377-4993-9846-a4311a84e9e7", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1724653245.34773, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b91b7bd4aa55264-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null, "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa2571f-4372-490b-8f6e-d45982bf2f2f", "children": ["c839dd3d-5814-4872-96cb-6cef507d8570"]}, "c839dd3d-5814-4872-96cb-6cef507d8570": {"id": "c839dd3d-5814-4872-96cb-6cef507d8570", "message": {"id": "c839dd3d-5814-4872-96cb-6cef507d8570", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724653272.181144, "update_time": null, "content": {"content_type": "text", "parts": ["Certainly! Here's the updated passage that focuses on utilizing feedback from long-time users to gauge the efficacy of the website:\n\n### Project Measurements\n\nThe success of the project aimed at promoting mindful engagement with social media through an educational website will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the project's impact and effectiveness, enabling ongoing refinements and enhancements.\n\nThe primary quantitative tool employed will be website analytics. Utilizing Google Analytics, the project will track several indicators including the number of visitors, page views, and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time, adjustments can be made to optimize the website's layout, content, and user interface to better meet the needs of the audience. Furthermore, these metrics will help determine the most and least popular sections of the website, guiding content strategy and development efforts to align with user preferences.\n\nIn addition to website analytics,

qualitative feedback from users will play a crucial role in assessing the project's success. Surveys and feedback forms will be integrated directly into the platform, making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of the mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers, offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content, ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\n\nInstead of conducting long-term studies, the project will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the project to gather real-time, applicable insights into how the platform influences users' social media habits over time, such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\n\nBy combining immediate, actionable data from website analytics with in-depth feedback from both new and long-time users, the project establishes a dynamic framework for measuring success. This strategy ensures that the project remains responsive to the needs of its users, fostering a more mindful and intentional social media landscape."]}, "status": "finished_successfully","end_turn": true

His hyperfocus on evidence, facts, and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance of external influences.\nNevertheless, the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook, Instagram, Twitter, and TikTok have become integral to the daily lives of millions, fundamentally altering how individuals communicate, receive information, and form opinions. As highlighted in Chapter 1, the widespread use of social media, with 72% of the U.S. public actively engaging on these platforms, underscores its profound impact on social, political, and community engagement (Auxier & Anderson, 2021). However, this extensive reach also brings significant risks, including the spread of misinformation, manipulation of public opinion, and the creation of echo chambers that

reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election, where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow, 2017).\nGiven these concerns, the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness, in this context, involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active, thoughtful engagement that prioritizes authenticity, truthfulness, and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye, thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health, particularly among young users. For instance, platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al., 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being, making it imperative to promote a more mindful approach to its use. By encouraging mindfulness, this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media, aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness, traditionally rooted in Eastern philosophical practices, has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption, mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions, often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership, which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness, individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively, where the distinction between authentic and manipulated content is often blurred.\n\tMindfulness practices also enhance cognitive focus and emotional regulation, which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found, authentic leadership, which shares many principles with mindfulness, positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media, where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement, reducing the likelihood of negative outcomes.\n\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being, as emphasized by authentic leadership principles

(Northouse, 2019). By cultivating mindfulness, users can develop a more critical and reflective approach to social media, which not only enhances their own experience but also contributes to a healthier, more constructive digital environment. This approach is crucial for countering the negative effects of social media, such as polarization and the spread of false information, by fostering a more informed and responsible public discourse.\n\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption, and by integrating mindfulness into social media use, this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership, this approach emphasizes self-awareness, ethical behavior, and critical thinking\u2014qualities that are essential for fostering a more informed, ethical, and constructive digital environment. This change is not only necessary but also timely, given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\n\tThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub, offering educational materials that promote mindfulness in the consumption of social media. At this stage, the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media, guides on achieving authenticity and mindfulness, and instructional content on mindfulness exercises specifically tailored for social media users.\n\tAdditionally, the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online, serving as practical examples for visitors to the site.\n\tWhile the initial launch of the website focuses on these resources, plans for future development include the addition of interactive features. A webinar is currently in development, aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\n\tLooking further ahead, the website may expand to include a community forum. This forum will provide a space for users to share experiences, challenges, and strategies related to mindful social media use, fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\n\tBy starting with a focus on educational resources and planning for gradual expansion, this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust, which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\n\tThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness, enabling ongoing refinements and enhancements.\nQuantitative Measurements\n\tWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics, the website will track several indicators, including the number of visitors, page views, and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time,

adjustments can be made to optimize the website's layout, content, and user interface to better meet the needs of the audience. Furthermore, these metrics will help determine the most and least popular sections of the website, guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\n\tIn addition to website analytics, qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform, making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers, offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content, ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies, the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time, applicable insights into how the platform influences users' social media habits over time, such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\n\tThe website leverages immediate, actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs, contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback, the website cultivates a responsive and user-centric experience, fostering a more mindful and intentional social media landscape.\n\nCan you write better conclusion that sums everything up abov e and transitiions to chapter five titiled : CHAPTER 5: Reflections and Recommendations"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"targeted_reply": "### Conclusion and Transition\n\nThis chapter has outlined a strategic approach to promoting mindfulness in social media engagement through educational resources and community collaboration. By equipping individuals with the tools to critically analyze and engage with social media, this project aims to cultivate a more informed, ethical, and proactive online community. Chapter 5 will reflect on the implementation of these strategies, evaluating their effectiveness and proposing future directions based on the outcomes observed.", "request_id": "8b91d50f49224c70-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "f09980a2-1f95-46e9-9f0f-2d94990bfb13", "children": ["60ffbad2-8b8d-4576-9244-6b42a71fd351"]}, "60ffbad2-8b8d-4576-9244-6b42a71fd351": {"id": "60ffbad2-8b8d-4576-9244-6b42a71fd351", "message": {"id": "60ffbad2-8b8d-4576-9244-6b42a71fd351", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1724654448.496176, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b91d50f49224c70-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null, "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa20b9a-49d1-4906-a28f-c8d9e6602155", "children": ["bf73e9e6-da3c-4eed-921f-0be6e38e428a"]}, "bf73e9e6-da3c-4eed-921f-0be6e38e428a": {"id": "bf73e9e6-da3c-

Recommendations\t33\n\tProject Summary\t33\n\tReflections\t34\n\tReferences\t39\n\n\n\nAbstract \n\t\tThis project investigates the crucial role of social media in shaping contemporary leadership through the lens of authentic leadership theories with a focus on how platforms like Twitter and Instagram extend leaders' reach and enable the communication of their authenticity. Intended for academics digital marketers and leadership professionals this study assesses the dual impact of these platforms on shaping public opinion and enhancing leaders' ability to connect authentically with their audiences. Utilizing a mixed-methods approach the findings highlight the potential of social media to promote leadership authenticity while cautioning against risks such as misinformation and polarization. Recommendations advocate for a mindful engagement with digital content to leverage the positive aspects of social media in leadership practices effectively. Keywords: social media authentic leadership digital influence ethical leadership organizational leadership leadership practices.\n\nAcknowledgment\nI would like to acknowledge and give my warmest thanks to my beloved partner and newlywed husband Claudio. Without his insightful sociological and philosophical perspectives this project would not have been possible. Even though I began this research project years before meeting him his strong opinions and unique influencer preferences such as Omegaclick have greatly influenced and shaped its development. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister Tammara who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of mindful living has had a profoundly positive effect on my outlook and life experiences. In that vein I also want to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful I am aware and leading myself! You are doing good work; you are helping people. \nFinally I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew

Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating

risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age. \n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media with platforms like Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nTo investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication

method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology.\nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential

negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\n\nCHAPTER 3: Literature Review\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts are new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. Furthermore he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing

with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's cognitive and emotional dimensions. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors'

conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with

these platforms can help to alleviate these risks fostering a more substantial and beneficial engagement with digital content. \nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that applying authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance despite his controversial beliefs and behaviors Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity

online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of an FBI agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks

including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader

objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\nLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\nBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\nThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends

over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\nThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.\nConclusion\nThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\nAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion he examines any project deeply quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this I conducted extensive research that culminated in

the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age providing insights grounded in established academic research. \nThe science behind the website including its focus on mindful engagement draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al. 2015). In light of these findings the website aims to promote positive and meaningful interactions prioritize authentic connections and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership which emphasize the importance of self-awareness ethical behavior and a commitment to the communal good (Gardner et al. 2005). The website serves as a manifestation of these principles offering users tools and strategies to engage with social media in ways that align with their values and promote positive ethical interactions.\nDespite the thoughtful construction and academic grounding of the website the initial reception from friends and family members while positive highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small familiar circle. Their responses which included encouraging remarks like "That's cool that you did that" were heartening but also revealed a critical challenge. The website's current reach is limited raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience. \nReflections\nReflecting on the entirety of this project it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever this project also illuminated some critical areas of concern. Chief among them is the realization that without a substantial increase in followership or broader visibility the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and by extension the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable suggesting that the project as it currently stands could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally with a newfound awareness or mindful outset one becomes less susceptible to influence if one does not desire to be influenced and is of a more independent mind.\nThe author has also observed both anecdotally and through supported research (Northouse 2019) that a fundamental aspect

of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity with authenticity being most effectively conveyed through genuine behavior (Kerfoot 2006). Therefore anyone aspiring to gain influence as a leader or individual should prioritize self-discovery true self-expression and honest communication (Gardner et al. 2005; Berkovich 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies including more aggressive use of social media platforms search engine optimization (SEO) and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform offering not only static content but also interactive features such as webinars discussion forums and perhaps even online courses. These additions would not only increase user engagement but also provide a richer more immersive experience for those interested in the intersection of leadership and social media influence. Moreover by creating a community around the website it would be possible to foster a sense of shared purpose among users which could further enhance the project's impact.\nIn terms of sustainability the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally continuous feedback from users will be crucial in guiding the evolution of the website ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations\nFor future research on this topic there are additional avenues that merit consideration. Firstly investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality virtual reality and other evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online

influence.\nAdditionally a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts. Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion while this project has laid a solid foundation for exploring the relationship between leadership and social media it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a sustainable way there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott H. & Gentzkow M. My name is [Your Name], and I\u2019m a graduate student at Claremont Lincoln University, currently completing my Master of Arts in Organizational Leadership. With a background in [Your Work Experience], I\u2019ve had the opportunity to witness firsthand the evolving dynamics of leadership in the digital age. Today, I\u2019m excited to share insights from my Capstone project, which explores the powerful role social media plays in shaping contemporary leadership."\n\n#### **Topic Explanation and Relevance (1 minute)**\n"My project focuses on the impact of social media platforms, particularly Twitter and Instagram, on modern leadership practices. As digital communication continues to redefine how leaders interact with their followers, the relevance of this topic becomes increasingly significant. In an era where authenticity and ethical leadership are paramount, understanding these dynamics is crucial for effective leadership."\n\n#### **Overview of the Problem (1 minute)**\n"The core issue addressed in my project is the challenge leaders face in maintaining authenticity while effectively engaging with audiences on social media. The rise of digital platforms has introduced complex dynamics\u2014balancing transparency, ethics, and public perception has never been more challenging for leaders."\n\n#### **Literature Review (2 minutes)**\n"My research delves into established leadership theories, particularly the concept of authentic leadership as discussed by scholars like Northouse and Gardner. Authentic leadership, with its emphasis on transparency and ethical behavior, aligns closely with the personal and direct nature of social media interactions."\n"However, while social media offers leaders unprecedented opportunities to connect, it also introduces risks, including the spread of misinformation and the potential for misinterpretation. These dual aspects make it imperative for leaders to navigate these platforms mindfully."\n\n#### **Discussion of the Solution (2 minutes)**\n"To address these challenges, I propose a framework centered on 'mindful leadership.' This approach encourages leaders to use social media in ways that uphold transparency and authenticity. It includes practical guidelines for mindful communication and strategies to enhance digital engagement without compromising ethical standards. By integrating mindfulness into their digital presence, leaders can maintain the trust and respect of their followers."\n\n\nCan you update these three paragraphs to better align and reflect the ideas and work presented in the attachments"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"attachments": [{"id": "file-KelcHNOJRvS11UYOIjmSV98j", "size": 9065, "name": "projectwebsite.html", "mime_type": "text/html", "file_token_size": 3670}, {"id": "file-OKAfsZvZCbseQ21AOSXPAJTo", "size": 35466, "name": "Capstone Templated Project Complete.docx", "mime_type": "application/vnd.openxmlformats-officedocument.wordprocessingml.document", "file_token_size": 21787}], "request_id": "8bcec29d3b340e63-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "9e30d9d1-6d02-439a-979d-11ccf3fc3ea1", "children": ["1acafd44-a5a0-45b8-94bd-1e145a7666ac"]}, "1acafd44-a5a0-45b8-94bd-1e145a7666ac": {"id": "1acafd44-a5a0-45b8-94bd-1e145a7666ac", "message": {"id": "1acafd44-a5a0-45b8-94bd-1e145a7666ac", "author": {"role": "tool",

Intended for academics digital marketers and leadership professionals this study assesses the dual impact of these platforms on shaping public opinion and enhancing leaders' ability to connect authentically with their audiences. Utilizing a mixed-methods approach the findings highlight the potential of social media to promote leadership authenticity while cautioning against risks such as misinformation and polarization. Recommendations advocate for a mindful engagement with digital content to leverage the positive aspects of social media in leadership practices effectively. Keywords: social media authentic leadership digital influence ethical leadership organizational leadership leadership

practices.\n\nAcknowledgment\nI would like to acknowledge and give my warmest thanks to my beloved partner and newlywed husband Claudio. Without his insightful sociological and philosophical perspectives this project would not have been possible. Even though I began this research project years before meeting him his strong opinions and unique influencer preferences such as Omegaclick have greatly influenced and shaped its development. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister Tammara who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of mindful living has had a profoundly positive effect on my outlook and life experiences. In that vein I also want to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful I am aware and leading myself! You are doing good work; you are helping people. \nFinally I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can

be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age. \n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a

sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media with platforms like Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nTo investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and

mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\n\nCHAPTER 3: Literature Review\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts are new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. Furthermore he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and

molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's cognitive and emotional dimensions. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through

empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and

achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with these platforms can help to alleviate these risks fostering a more substantial and beneficial engagement with digital content. \nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form

of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that applying authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance despite his controversial beliefs and behaviors Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter

presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of an FBI agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and

psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only

necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\nLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\nBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\nThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term

studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\nThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.\nConclusion\nThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\nAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion he examines any project deeply quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age providing insights grounded in established academic research. \nThe science behind the website including its focus on mindful engagement draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al. 2015). In light of these findings the website aims to promote positive and meaningful interactions prioritize authentic connections and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media the site aspires to guide

individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership which emphasize the importance of self-awareness ethical behavior and a commitment to the communal good (Gardner et al. 2005). The website serves as a manifestation of these principles offering users tools and strategies to engage with social media in ways that align with their values and promote positive ethical interactions.\nDespite the thoughtful construction and academic grounding of the website the initial reception from friends and family members while positive highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small familiar circle. Their responses which included encouraging remarks like "That's cool that you did that" were heartening but also revealed a critical challenge. The website's current reach is limited raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience. \nReflections\nReflecting on the entirety of this project it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever this project also illuminated some critical areas of concern. Chief among them is the realization that without a substantial increase in followership or broader visibility the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and by extension the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable suggesting that the project as it currently stands could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally with a newfound awareness or mindful outset one becomes less susceptible to influence if one does not desire to be influenced and is of a more independent mind.\nThe author has also observed both anecdotally and through supported research (Northouse 2019) that a fundamental aspect of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity with authenticity being most effectively conveyed through genuine behavior (Kerfoot 2006). Therefore anyone aspiring to gain influence as a leader or individual should prioritize self-discovery true self-expression and honest communication (Gardner et al. 2005; Berkovich 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However the weaknesses are

equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies including more aggressive use of social media platforms search engine optimization (SEO) and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform offering not only static content but also interactive features such as webinars discussion forums and perhaps even online courses. These additions would not only increase user engagement but also provide a richer more immersive experience for those interested in the intersection of leadership and social media influence. Moreover by creating a community around the website it would be possible to foster a sense of shared purpose among users which could further enhance the project's impact.\nIn terms of sustainability the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally continuous feedback from users will be crucial in guiding the evolution of the website ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations\nFor future research on this topic there are additional avenues that merit consideration. Firstly investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality virtual reality and other evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online influence.\nAdditionally a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts. Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion while this project has laid a solid foundation for exploring the relationship between leadership and social media it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a sustainable way there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott H. & Gentzkow M. As digital communication increasingly shapes the way leaders connect with their audiences, the imperative for authentic engagement becomes more pronounced. Social media platforms like Twitter and Instagram not only extend leaders' reach but also challenge them to maintain their authenticity in every interaction."\n\n#### **Overview of the Problem (1 minute)**\n"The crux of my research addresses the critical challenge leaders face in preserving authenticity while engaging on digital platforms. The pervasive influence of social media invites a host of ethical dilemmas, from balancing personal transparency with professional discretion to navigating the complexities of online misinformation. These challenges complicate leaders' efforts to maintain genuine connections with their followers."\n\n#### **Discussion of the Solution (2 minutes)**\n"To tackle these challenges, my project advocates for 'mindful leadership' on social media\u2014a strategic approach that emphasizes the mindful consumption of digital content and the mindful production of the same. This framework not only fosters authentic communication but also encourages leaders to engage thoughtfully, ensuring their interactions are consistent with ethical standards and personal integrity. By embedding mindfulness into their digital interactions, leaders can enhance their credibility and foster genuine connections with their audience."\n\nThese adjustments ensure that the script accurately reflects the focus and findings of your capstone project while maintaining clarity and engagement for your presentation audience."]}, "status": "finished_successfully","end_turn": true

Here are the revised paragraphs for the video presentation script with a greater focus on the issue of hidden influences on social media and the solution of mindfulness and authenticity:\n\n#### **Topic Explanation and Relevance (1 minute)**\n"In this project, we delve into the powerful influence of social media on contemporary leadership, focusing particularly on the hidden impacts these platforms can have. Social media extends a leader's reach but also introduces subtle influences that can affect both leaders and their audiences. Given that followers often seek and perceive authenticity in online influencers, it's crucial for leaders to genuinely embody the values they promote. This dynamic places a premium on authentic leadership in the digital sphere."\n\n#### **Overview of the Problem (1 minute)**\n"The central challenge explored in this research is the often-hidden influence exerted by social media on both leaders and followers. This influence can distort perceptions and interactions, making it difficult for leaders to maintain authenticity and for followers to discern it. As social media becomes a primary platform for leadership communication, these hidden dynamics can lead to significant ethical dilemmas, complicating the maintenance of transparent and authentic connections."\n\n#### **Discussion of the Solution (2 minutes)**\n"To address these pervasive issues, I propose embracing 'mindful leadership' as a core strategy for leaders engaging on social media. Mindfulness in this context involves leaders being acutely aware of the content they produce and consume, ensuring it aligns with genuine leadership practices. Simultaneously, followers are encouraged to engage with social media content mindfully, recognizing the nuances of authenticity and the potential for hidden manipulations. This dual approach of mindfulness and authenticity not only helps mitigate the adverse effects of social media's influence but also enhances the quality of interactions, fostering a more ethical and genuine digital environment."\n\nThese adjustments emphasize the problems of hidden influences on social media and highlight mindfulness and authenticity as critical solutions, aligning closely with the themes of your capstone project."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAAAAAAAAAAAAAA", "parent_id": "aaa2fceb-9521-4f26-ab40-7c23d133eeb9", "request_id": "8bcec8671abd4bdc-MXP", "timestamp_": "absolute", "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true}, "recipient": "all", "channel": null}, "parent": "aaa2fceb-9521-4f26-ab40-7c23d133eeb9", "children": []}}, "moderation_results": [], "current_node": "41d9d36e-0efa-469f-8b05-962ed2c5b194", "plugin_ids": null, "conversation_id": "c3e70c6f-5ecc-43be-bddd-ed16256f4f56", "conversation_template_id": null, "gizmo_id": null, "is_archived": false, "safe_urls": ["https://www.tiktok.com/tag/takecontrol?refer=embed", "https://www.pewresearch.org/internet/2021/04/07/social-media-use-in-2021/", "https://journals.sagepub.com/doi/10.1177/1350506818765318", "https://consensus.app/papers/connections-mindfulnessbased-intervention-adolescent-weaver/6e4572092d915057926265fbcec9936e/?utm_source=chatgpt",

My name is [Your Name], and I\u2019m a graduate student at Claremont Lincoln University, currently completing my Master of Arts in Organizational Leadership. With a background in [Your Work Experience], I\u2019ve had the opportunity to witness firsthand the evolving dynamics of leadership in the digital age. Today, I\u2019m excited to share insights from my Capstone project, which explores the powerful role social media plays in shaping contemporary leadership."\n\n#### **Topic Explanation and Relevance (1 minute)**\n"My project focuses on the impact

of social media platforms, particularly Twitter and Instagram, on modern leadership practices. As digital communication continues to redefine how leaders interact with their followers, the relevance of this topic becomes increasingly significant. In an era where authenticity and ethical leadership are paramount, understanding these dynamics is crucial for effective leadership."\n\n#### **Overview of the Problem (1 minute)**\n"The core issue addressed in my project is the challenge leaders face in maintaining authenticity while effectively engaging with audiences on social media. The rise of digital platforms has introduced complex dynamics\u2014balancing transparency, ethics, and public perception has never been more challenging for leaders."\n\n#### **Literature Review (2 minutes)**\n"My research delves into established leadership theories, particularly the concept of authentic leadership as discussed by scholars like Northouse and Gardner. Authentic leadership, with its emphasis on transparency and ethical behavior, aligns closely with the personal and direct nature of social media interactions."\n"However, while social media offers leaders unprecedented opportunities to connect, it also introduces risks, including the spread of misinformation and the potential for misinterpretation. These dual aspects make it imperative for leaders to navigate these platforms mindfully."\n\n#### **Discussion of the Solution (2 minutes)**\n"To address these challenges, I propose a framework centered on 'mindful leadership.' This approach encourages leaders to use social media in ways that uphold transparency and authenticity. It includes practical guidelines for mindful communication and strategies to enhance digital engagement without compromising ethical standards. By integrating mindfulness into their digital presence, leaders can maintain the trust and respect of their followers."\n\n#### **Impact and Implications (2 minutes)**\n"The implications of my project are significant for both academic research and practical leadership. For organizations, adopting mindful leadership practices can lead to more genuine and effective leadership, positively impacting organizational culture and employee engagement. On an academic level, my findings contribute to ongoing discussions about integrating ethical practices into digital leadership strategies, offering a pathway for future leaders to navigate the complexities of the digital era."\n\n#### **Conclusion (1 minute)**\n"In conclusion, my Capstone project highlights the evolving role of social media in leadership and provides a mindful approach for leaders to adapt to these changes while staying true to their core values. By fostering authenticity and ethical practices in digital interactions, leaders can effectively harness the power of social media to inspire and engage their audiences."\n\n#### **Closing (30 seconds)**\n"Thank you for taking the time to watch my presentation. I\u2019m eager to discuss these ideas further and explore their practical applications in various leadership contexts. Please feel free to reach out wi"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8bce6a8fbababa9f-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "77baef7f-a635-456c-9430-6931137db502", "children": ["0f02149f-13d3-4efe-bc80-d2a8c499226f"]}, "0f02149f-13d3-4efe-bc80-d2a8c499226f": {"id": "0f02149f-13d3-4efe-bc80-d2a8c499226f", "message": {"id": "0f02149f-13d3-4efe-bc80-d2a8c499226f", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1725289729.66981, "update_time": null, "content": {"content_type": "text", "parts": ["To begin creating the presentation "From Tweets to Change: Social Media's Role in Contemporary Leadership," I will first outline the structure and approach for the slides based

This influence can distort perceptions and interactions, making it difficult for leaders to maintain authenticity and for followers to discern it. As social media becomes a primary platform for leadership communication, these hidden dynamics can lead to significant ethical dilemmas, complicating the maintenance of transparent and authentic connections."\n\nDiscussion of the Solution (2 minutes)\n"To address these pervasive issues, I propose embracing 'mindful leadership' as a core strategy for leaders engaging on social media. Mindfulness in this context involves leaders being acutely aware of the content they produce and consume, ensuring it aligns with genuine leadership practices. Simultaneously, followers are encouraged to engage with social media content mindfully, recognizing the nuances of authenticity and the potential for hidden manipulations. This dual approach of mindfulness and authenticity not only helps mitigate the adverse effects of social media's influence but also enhances the quality of interactions, fostering a more ethical and genuine digital environment."\n\nwe can maybe even keep these titles and generate additional slides around each paragraph\n"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8bced0273abf4bf1-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient":

My name is [Your Name], and I\u2019m a graduate student at Claremont Lincoln University, currently completing my Master of Arts in Organizational Leadership. With a background in [Your Work Experience], I\u2019ve had the opportunity to witness firsthand the evolving dynamics of leadership in the digital age. Today, I\u2019m excited to share insights from my Capstone project, which explores the powerful role social media plays in shaping contemporary leadership."\n\n#### **Topic Explanation and Relevance (1 minute)**\n"My project focuses on the impact of social media platforms, particularly Twitter and Instagram, on modern leadership practices. As digital communication continues to redefine how leaders interact with their followers, the relevance of this topic becomes increasingly significant. In an era where authenticity and ethical leadership are paramount, understanding these dynamics is crucial for effective leadership."\n\n#### **Overview of the Problem (1 minute)**\n"The core issue addressed in my project is the challenge leaders face in maintaining authenticity while effectively engaging with audiences on social media. The rise of digital platforms has introduced complex dynamics\u2014balancing transparency, ethics, and public perception has never been more challenging for leaders."\n\n#### **Literature Review (2 minutes)**\n"My research delves into established leadership theories, particularly the concept of authentic leadership as discussed by scholars like Northouse and Gardner. Authentic leadership, with its emphasis on transparency and ethical behavior, aligns closely with the personal and direct nature of social media interactions."\n"However, while social media offers leaders unprecedented opportunities to connect, it also introduces risks, including the spread of misinformation and the potential for misinterpretation. These dual aspects make it imperative for leaders to navigate these platforms mindfully."\n\n#### **Discussion of the Solution (2 minutes)**\n"To address these challenges, I propose a framework centered on 'mindful leadership.' This approach encourages leaders to use social media in ways that uphold transparency and authenticity. It includes practical guidelines for mindful communication and strategies to enhance digital engagement without compromising ethical standards. By integrating mindfulness into their digital presence, leaders can maintain the trust and respect of their followers."\n\n#### **Impact and Implications (2 minutes)**\n"The implications of my project are significant for both academic research and practical leadership. For organizations, adopting mindful leadership practices can lead to more genuine and effective leadership, positively impacting organizational culture and employee engagement. On an academic level, my findings contribute to ongoing discussions about integrating ethical practices into digital leadership strategies, offering a pathway for future leaders to navigate the complexities of the digital era."\n\n#### **Conclusion (1 minute)**\n"In conclusion, my Capstone project highlights the evolving role of social media in leadership and provides a mindful approach for leaders to adapt to these changes while staying true to their core values. By fostering authenticity and ethical practices in digital interactions, leaders can effectively harness the power of social media to inspire and engage their audiences."\n\n#### **Closing (30 seconds)**\n"Thank you for taking the time to watch my presentation. I\u2019m eager to discuss these ideas further and explore their practical applications in various leadership contexts. Please feel free to reach out with any questions or for more information. Have a wonderful day!"\n\n---\n"]}, "status":

Intended for academics digital marketers and leadership professionals this study assesses the dual impact of these platforms on shaping public opinion and enhancing leaders' ability to connect authentically with their audiences. Utilizing a mixed-methods approach the findings highlight the potential of social media to promote leadership authenticity while cautioning against risks such as misinformation and polarization. Recommendations advocate for a mindful engagement with digital content to leverage the positive aspects of social media in leadership practices effectively. Keywords: social media authentic leadership digital influence ethical leadership organizational leadership leadership practices.\n\nAcknowledgment\nI would like to acknowledge and give my warmest thanks to my beloved partner and newlywed husband Claudio. Without his insightful sociological and philosophical perspectives this project would not have been possible. Even though I began this research project years before meeting him his strong opinions and unique influencer preferences such as Omegaclick have greatly influenced and shaped its development. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister Tammara who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of mindful living has had a profoundly positive effect on my outlook and life experiences.

In that vein I also want to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful I am aware and leading myself! You are doing good work; you are helping people. \nFinally I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to

understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age. \n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers

who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media with platforms like Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nTo investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer

marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\nCHAPTER 3: Literature Review\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts are new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. Furthermore he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the

need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's cognitive and emotional dimensions. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual

follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality

leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with these platforms can help to alleviate these risks fostering a more substantial and beneficial engagement with digital content. \nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that applying authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively.

By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance despite his controversial beliefs and behaviors Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging

the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of an FBI agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning

with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the

website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\nLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\nBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\nThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\nThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a

dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.\nConclusion\nThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\nAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion he examines any project deeply quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age providing insights grounded in established academic research. \nThe science behind the website including its focus on mindful engagement draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al. 2015). In light of these findings the website aims to promote positive and meaningful interactions prioritize authentic connections and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership which emphasize the importance of self-awareness ethical behavior and a commitment to the communal good (Gardner et al. 2005). The website serves as a manifestation of these principles offering users tools and strategies to engage with social media in ways that align with their values and promote positive ethical interactions.\nDespite the thoughtful construction and academic grounding of the website the initial reception from friends and family members while positive highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small familiar circle. Their

responses which included encouraging remarks like "That's cool that you did that" were heartening but also revealed a critical challenge. The website's current reach is limited raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience. \nReflections\nReflecting on the entirety of this project it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever this project also illuminated some critical areas of concern. Chief among them is the realization that without a substantial increase in followership or broader visibility the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and by extension the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable suggesting that the project as it currently stands could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally with a newfound awareness or mindful outset one becomes less susceptible to influence if one does not desire to be influenced and is of a more independent mind.\nThe author has also observed both anecdotally and through supported research (Northouse 2019) that a fundamental aspect of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity with authenticity being most effectively conveyed through genuine behavior (Kerfoot 2006). Therefore anyone aspiring to gain influence as a leader or individual should prioritize self-discovery true self-expression and honest communication (Gardner et al. 2005; Berkovich 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies including more aggressive use of social media platforms search engine optimization (SEO) and possibly collaborations with influencers or thought leaders in the field.

These actions would help to expand the website's reach and attract a broader audience thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform offering not only static content but also interactive features such as webinars discussion forums and perhaps even online courses. These additions would not only increase user engagement but also provide a richer more immersive experience for those interested in the intersection of leadership and social media influence. Moreover by creating a community around the website it would be possible to foster a sense of shared purpose among users which could further enhance the project's impact.\nIn terms of sustainability the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally continuous feedback from users will be crucial in guiding the evolution of the website ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations\nFor future research on this topic there are additional avenues that merit consideration. Firstly investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality virtual reality and other evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online influence.\nAdditionally a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts. Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion while this project has laid a solid foundation for exploring the relationship between leadership and social media it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a sustainable way there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott H. & Gentzkow M. I think thats brief enough. also I have a sort of script but i didn't quite like it. Maybe you can improve it: \n\nScript for Video Presentation\nHere\u2019s a draft script for your video presentation, tailored to fit within an 8-12 minute timeframe:\n\nIntroduction (30 seconds)\n\n"Hello and welcome! My name is [Your Name], and I'm a graduate student at Claremont Lincoln University, currently completing my Master of Arts in Organizational Leadership. Today, I'm excited to share with you my Capstone project, which explores the significant role of social media in shaping contemporary leadership."\nTopic Explanation and Relevance (1 minute)\n\n"The focus of my project is on how social media platforms like Twitter and Instagram influence leadership practices today. This topic is highly relevant as digital communication continues to reshape how leaders interact and influence their followers, particularly in the context of authenticity and ethical leadership."\nOverview of the Problem (1 minute)\n\n"The primary problem my project addresses is the challenge leaders face in maintaining authenticity while effectively leveraging social media to engage and inspire their audiences. With the rise of digital platforms, leaders are navigating complex dynamics of transparency, ethics, and public perception."\nLiterature Review (2 minutes)\n\n"My research included a thorough review of existing literature on leadership theories,

particularly authentic leadership, and the impact of social media on leadership practices. Scholars like Northouse and Gardner have discussed the intricacies of authentic leadership, which aligns closely with the transparent and personal nature of social media interactions."\n"Studies indicate that while social media offers tremendous opportunities for leaders to connect with their audience, it also poses risks such as misinformation and the potential for misinterpretation."\nDiscussion of the Solution (2 minutes)\n\n"To address these challenges, I developed a solution centered around the concept of 'mindful leadership'. This involves training leaders to use social media in a way that promotes transparency and maintains their authenticity. The solution includes practical guidelines for mindful communication and strategies to enhance digital engagement without compromising ethical standards."\nImpact and Implications (2 minutes)\n\n"The implications of my project are significant for both academic and practical applications. For organizations, implementing these mindful leadership practices can lead to more genuine and effective leadership, enhancing organizational culture and employee engagement. Academically, my findings contribute to the ongoing discussions on integrating ethical practices into digital leadership strategies."\nConclusion (1 minute)\n\n"In conclusion, my Capstone project not only sheds light on the evolving role of social media in leadership but also provides a framework for leaders to adapt to these changes in a mindful and ethical manner. I believe the insights from this project can guide current and future leaders to harness the power of digital platforms while staying true to their core values."\nClosing (30 seconds)\n\n"Thank you for watching my presentation. I look forward to discussing these ideas further and exploring their practical applications in various leadership contexts. Please feel free to reach out with questions or for more information. Have a great day!"\nThis script structures your presentation to fit within the required timeframe while covering all the necessary elements. As for the video-making software, if you're comfortable with Canva, it's a good choice to start with since it provides a straightforward platform for creating visually appealing presentations. If you need any adjustments or additional details in the script, feel free to ask!"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8bcbb1a55efc5254-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "c9aa67c2-98cd-406b-b312-29164144e969", "children": ["dfd7973e-4226-4383-bd4c-ef438bc4673e"]}, "dfd7973e-4226-4383-bd4c-ef438bc4673e": {"id": "dfd7973e-4226-4383-bd4c-ef438bc4673e", "message": {"id": "dfd7973e-4226-4383-bd4c-ef438bc4673e", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1725261189.817017, "update_time": null, "content": {"content_type": "text", "parts": ["Thank you for sharing your script! I can help refine it to make it more engaging and polished while ensuring it fits within the 8-12 minute timeframe. Here\u2019s an improved version:\n\n---\n\n### **Script for Video Presentation**\n\n#### **Introduction (30 seconds)**\n"Hello and welcome! My name is [Your Name], and I\u2019m a graduate student at Claremont Lincoln University, currently completing my Master of Arts in Organizational Leadership. With a background in [Your Work Experience], I\u2019ve had the opportunity to witness firsthand the evolving dynamics of leadership in the digital age. Today, I\u2019m excited to share insights from my Capstone project, which explores the powerful role social media plays in shaping contemporary leadership."\n\n#### **Topic Explanation and Relevance (1 minute)**\n"My

project focuses on the impact of social media platforms, particularly Twitter and Instagram, on modern leadership practices. As digital communication continues to redefine how leaders interact with their followers, the relevance of this topic becomes increasingly significant. In an era where authenticity and ethical leadership are paramount, understanding these dynamics is crucial for effective leadership."\n\n#### **Overview of the Problem (1 minute)**\n"The core issue addressed in my project is the challenge leaders face in maintaining authenticity while effectively engaging with audiences on social media. The rise of digital platforms has introduced complex dynamics\u2014balancing transparency, ethics, and public perception has never been more challenging for leaders."\n\n#### **Literature Review (2 minutes)**\n"My research delves into established leadership theories, particularly the concept of authentic leadership as discussed by scholars like Northouse and Gardner. Authentic leadership, with its emphasis on transparency and ethical behavior, aligns closely with the personal and direct nature of social media interactions."\n"However, while social media offers leaders unprecedented opportunities to connect, it also introduces risks, including the spread of misinformation and the potential for misinterpretation. These dual aspects make it imperative for leaders to navigate these platforms mindfully."\n\n#### **Discussion of the Solution (2 minutes)**\n"To address these challenges, I propose a framework centered on 'mindful leadership.' This approach encourages leaders to use social media in ways that uphold transparency and authenticity. It includes practical guidelines for mindful communication and strategies to enhance digital engagement without compromising ethical standards. By integrating mindfulness into their digital presence, leaders can maintain the trust and respect of their followers."\n\n#### **Impact and Implications (2 minutes)**\n"The implications of my project are significant for both academic research and practical leadership. For organizations, adopting mindful leadership practices can lead to more genuine and effective leadership, positively impacting organizational culture and employee engagement. On an academic level, my findings contribute to ongoing discussions about integrating ethical practices into digital leadership strategies, offering a pathway for future leaders to navigate the complexities of the digital era."\n\n#### **Conclusion (1 minute)**\n"In conclusion, my Capstone project highlights the evolving role of social media in leadership and provides a mindful approach for leaders to adapt to these changes while staying true to their core values. By fostering authenticity and ethical practices in digital interactions, leaders can effectively harness the power of social media to inspire and engage their audiences."\n\n#### **Closing (30 seconds)**\n"Thank you for taking the time to watch my presentation. I\u2019m eager to discuss these ideas further and explore their practical applications in various leadership contexts. Please feel free to reach out with any questions or for more information. Have a wonderful day!"\n\n---\n\nThis revision maintains the original structure but adds a bit more depth and flow to your ideas. It also integrates your work and educational background more seamlessly into the introduction. If you have any further adjustments or need help with creating the presentation in Canva, feel free to ask!"]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-alKfVrz9K", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAA", "parent_id": "aaa2eaf2-5447-4952-

Here are a few specific types of Canva templates that could work well:\n\n### 1. **Professional Presentation Templates**\n - **Template Name:** "Modern Corporate Presentation"\n - **Why:** This template is sleek and professional, with a clean design that will help keep the focus on your content. It\u2019s ideal for academic presentations and will work well for a formal conference-style video.\n\n### 2. **Educational Video Presentation Templates**\n - **Template Name:** "Educational Course Presentation"\n - **Why:** This template is designed for educational content, with sections that allow you to present your research, problem overview, and solution in a structured way. It also includes visuals and icons that can help illustrate key points effectively.\n\n### 3. **Minimalist Presentation Templates**\n - **Template Name:** "Minimalist Professional Presentation"\n - **Why:** A minimalist design ensures that your content stands out without overwhelming visuals. This template is perfect for a presentation that requires a focus on text and key messages.\n\n### 4. **Infographic Video Templates**\n - **Template Name:** "Infographic Presentation"\n - **Why:** If your presentation includes a lot of data or you want to visually represent key points (e.g., the impact of social media, statistics, etc.), an infographic-style template can make your information more digestible and engaging.\n\n### 5. **Business Plan Presentation Templates**\n - **Template Name:** "Business Strategy Presentation"\n - **Why:** This template often includes a mix of text, charts, and image placeholders, making it versatile for covering various aspects of your Capstone project, from the problem statement to solutions and implications.\n\nThese templates will give your presentation a polished and cohesive look, suitable for an academic setting. You can search for these templates directly on Canva by using the template names provided. Once selected, you can customize them to fit your content, adding your text, images, and other elements as needed. \n\nWould you like to see some designs generated based on a specific one of these templates, or do you need further assistance in customizing them?"]}, "status": "finished_successfully","end_turn": true

The presentation should be professional yet engaging, with prebuilt animations and graphics that emphasize themes of authenticity, ethical leadership, and mindful communication. Include sections for an introduction, problem overview, literature review, proposed solutions, and implications. The design should incorporate clean lines, subtle transitions, and visually appealing data representations to enhance the viewer's understanding of the content. Use a minimalist color palette with accents that highlight key points, ensuring the overall tone is academic and polished."", "request_id": "8bcbc4fdadf8599b-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "bc01b828-9b21-4082-982e-7823d0249da1", "children": ["db99fdbe-0810-404b-b667-4061e8895dc8"]}, "db99fdbe-0810-404b-b667-4061e8895dc8": {"id": "db99fdbe-0810-404b-b667-4061e8895dc8", "message": {"id": "db99fdbe-0810-404b-b667-4061e8895dc8", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1725261964.353463, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8bcbc4fdadf8599b-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null, "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa2b34f-022f-4bae-b32a-b43bf5372144", "children": ["20193de5-d69b-4b98-bc39-43977268dedd"]}, "20193de5-d69b-4b98-bc39-43977268dedd": {"id": "20193de5-d69b-4b98-bc39-43977268dedd", "message": {"id": "20193de5-d69b-4b98-bc39-43977268dedd", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1725261969.636831, "update_time": null, "content": {"content_type": "text", "parts": ["You're right; the prompt may be a bit long for Canva's Magic Design feature. However, I can guide you on how to create a calming, blue-toned

presentation template in Canva:\n\n### **Steps to Create a Blue Tone, Cool, and Calming Presentation in Canva:**\n\n1. **Search for a Template:**\n   - Go to Canva and search for \u201ccalming presentation\u201d or \u201cblue tone presentation\u201d in the search bar. You can also start with a blank presentation.\n\n2. **Set the Color Scheme:**\n   - Choose a calming blue color palette. You can adjust the colors by selecting the background or elements and setting them to various shades of blue (e.g., pastel blue, teal, navy).\n   - Canva has a color palette generator that can help you choose complementary shades.\n\n3. **Choose Fonts and Elements:**\n   - Select clean, modern fonts that are easy to read. Sans-serif fonts like \u201cLato\u201d or \u201cOpen Sans\u201d work well for a calming effect.\n   - Use simple, minimalist elements like line icons, circles, and soft shapes.\n\n4. **Add Backgrounds and Images:**\n   - Use light, subtle backgrounds. Search for \u201ccalm,\u201d \u201cmeditation,\u201d or \u201cmindfulness\u201d images in Canva\u2019s Photos tab and set them as backgrounds.\n   - Consider adding soft gradients or transparent overlays in blue tones to keep the focus on your content.\n\n5. **Incorporate Animations:**\n   - For a video presentation, you can add subtle animations to your text or elements. Go to the \u201cAnimate\u201d option and select effects like \u201cFade In\u201d or \u201cDrift\u201d for a smooth, calming transition.\n\n6. **Customize and Finalize:**\n   - Add your content and arrange the slides according to the structure we discussed. Adjust the text, images, and animations to ensure everything is cohesive.\n\nBy following these steps, you'll be able to create a beautiful, calming presentation that aligns with the theme of mindfulness and leadership. If you need further guidance, feel free to ask!"]}, "status": "finished_successfully","end_turn": true

\n\n\t\t\n\nAcknowledgment\nI would like to acknowledge and give my warmest thanks to my beloved husband Claudio Durante without whose keen sociological and philosophical insights this project would not have been possible. Although this capstone project was conceived of years before we met spending time with someone of such decisive opinion with such absurd influencer preferences wholly informed what it has become. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister Tammara who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of mindful living has had a profoundly positive effect on my outlook and life experiences. In that vein I would also like to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful I am aware and leading myself! You are doing good work; you are helping people. \nFinally I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their

platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays

reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media with platforms like Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nTo investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership

by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact.\n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While

those in academia consider whether or not their thoughts are new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. Furthermore he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's

cognitive and emotional dimensions. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from

education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with these platforms can help to alleviate these risks fostering a more substantial and beneficial engagement with digital content. \nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect

true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that applying authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance despite his controversial beliefs and behaviors Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders

providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of an FBI agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and

actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its

consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\tLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\tBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\n\tThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-

world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\tThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.\nConclusion\n\tThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces. \n\tAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion he examines any project deeply quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age providing insights grounded in established academic research. \nThe science behind the website including its focus on mindful engagement draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al. 2015). In light of these findings the website aims to promote positive and meaningful

interactions prioritize authentic connections and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership which emphasize the importance of self-awareness ethical behavior and a commitment to the communal good (Gardner et al. 2005). The website serves as a manifestation of these principles offering users tools and strategies to engage with social media in ways that align with their values and promote positive ethical interactions.\nDespite the thoughtful construction and academic grounding of the website the initial reception from friends and family members while positive highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small familiar circle. Their responses which included encouraging remarks like "That's cool that you did that" were heartening but also revealed a critical challenge. The website's current reach is limited raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience.
\nReflections\nReflecting on the entirety of this project it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever this project also illuminated some critical areas of concern. Chief among them is the realization that without a substantial increase in followership or broader visibility the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and by extension the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable suggesting that the project as it currently stands could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally with a newfound awareness or mindful outset one becomes less susceptible to influence if one does not desire to be influenced and is of a more independent mind.\nThe author has also observed both anecdotally and through supported research (Northouse 2019) that a fundamental aspect of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity with authenticity being most effectively conveyed through genuine behavior (Kerfoot 2006). Therefore anyone aspiring to gain influence as a leader or individual should prioritize self-discovery true self-expression and honest communication (Gardner et al. 2005; Berkovich 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to

emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies including more aggressive use of social media platforms search engine optimization (SEO) and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform offering not only static content but also interactive features such as webinars discussion forums and perhaps even online courses. These additions would not only increase user engagement but also provide a richer more immersive experience for those interested in the intersection of leadership and social media influence. Moreover by creating a community around the website it would be possible to foster a sense of shared purpose among users which could further enhance the project's impact.\nIn terms of sustainability the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally continuous feedback from users will be crucial in guiding the evolution of the website ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations &Conclusions\nFor future research on this topic there are additional avenues that merit consideration. Firstly investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality virtual reality and other evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online influence.\nAdditionally a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts. Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion while this project has laid a solid foundation for exploring the relationship between leadership and social media it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a

sustainable way there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott H. & Gentzkow M. Although this capstone project was conceived of years before we met spending time with someone of such decisive opinion with such absurd influencer preferences wholly informed what it has become. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister Tammara who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of mindful living has had a profoundly positive effect on my outlook and life experiences. In that vein I would also like to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful I am aware and leading myself! You are doing good work; you are helping people. \nFinally I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks

beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider

Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media with platforms like Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nTo investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions.

The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding

the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts are new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. Furthermore he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of

authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's cognitive and emotional dimensions. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study

did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through

mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with these platforms can help to alleviate these risks fostering a more substantial and beneficial engagement with digital content. \nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that applying authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing

authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance despite his controversial beliefs and behaviors Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of

Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of an FBI agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the

principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\tLooking further ahead the website may expand to include a community forum.

This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\tBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\n\tThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\tThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.\nConclusion\n\tThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of

mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces. \n\tAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion he examines any project deeply quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age providing insights grounded in established academic research. \nThe science behind the website including its focus on mindful engagement draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al. 2015). In light of these findings the website aims to promote positive and meaningful interactions prioritize authentic connections and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership which emphasize the importance of self-awareness ethical behavior and a commitment to the communal good (Gardner et al. 2005). The website serves as a manifestation of these principles offering users tools and strategies to engage with social media in ways that align with their values and promote positive ethical interactions.\nDespite the thoughtful construction and academic grounding of the website the initial reception from friends and family members while positive highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small familiar circle. Their responses which included encouraging remarks like "That's cool that you did that" were heartening but also revealed a critical challenge. The website's current reach is limited raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience. \nReflections\nReflecting on the entirety of this project it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and

practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever this project also illuminated some critical areas of concern. Chief among them is the realization that without a substantial increase in followership or broader visibility the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and by extension the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable suggesting that the project as it currently stands could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally with a newfound awareness or mindful outset one becomes less susceptible to influence if one does not desire to be influenced and is of a more independent mind.\nThe author has also observed both anecdotally and through supported research (Northouse 2019) that a fundamental aspect of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity with authenticity being most effectively conveyed through genuine behavior (Kerfoot 2006). Therefore anyone aspiring to gain influence as a leader or individual should prioritize self-discovery true self-expression and honest communication (Gardner et al. 2005; Berkovich 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies including more aggressive use of social media platforms search engine optimization (SEO) and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform offering not only static content but also interactive features such as webinars discussion forums and perhaps even online courses. These additions would not only increase user engagement but also provide a richer more immersive experience for those interested in the intersection of leadership and social media influence. Moreover by creating a community around the website it would be possible to

foster a sense of shared purpose among users which could further enhance the project's impact.\nIn terms of sustainability the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally continuous feedback from users will be crucial in guiding the evolution of the website ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations &Conclusions\nFor future research on this topic there are additional avenues that merit consideration. Firstly investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality virtual reality and other evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online influence.\nAdditionally a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts. Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion while this project has laid a solid foundation for exploring the relationship between leadership and social media it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a sustainable way there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott H. & Gentzkow M. The research addresses the problem of understanding how leaders can effectively use social media platforms to engage and influence public opinion and societal values. The intended audience includes scholars in the fields of digital media studies and organizational leadership, as well as practitioners within the realm of social media management and public relations.\n\nThe project employed a mixed-methods approach, synthesizing literature reviews with qualitative analysis of social media interactions to examine the traits and strategies of social media influencers as modern leaders. The findings indicate that social media not only broadens the reach and impact of

leadership but also necessitates a high degree of authenticity and ethical consideration due to its direct and pervasive influence.\n\nConclusively, the study reveals that social media serves as both a platform for authentic leadership and a critical area for the application of ethical guidelines in leadership practices. The recommendations suggest strategies for leaders to maintain authenticity while maximizing their positive impact on followers. These include ongoing self-awareness, transparent communication, and the promotion of ethical engagement strategies.\n\nKeywords: social media, authentic leadership, digital influence, ethical leadership, organizational leadership, public engagement."]}, "status": "finished_successfully","end_turn": true

through the lens of authentic leadership theories with a focus on how platforms like Twitter and Instagram extend leaders' reach and enable the communication of their authenticity. Intended for academics digital marketers and leadership professionals this study assesses the dual impact of these platforms on shaping public opinion and enhancing leaders' ability to connect authentically with their audiences. Utilizing a mixed-methods approach the findings highlight the potential of social media to promote leadership authenticity while cautioning against risks such as misinformation and polarization. Recommendations advocate for a mindful engagement with digital content to leverage the positive aspects of social media in leadership practices effectively. Keywords: social media authentic leadership digital influence ethical leadership organizational leadership leadership practices.\n\nAcknowledgment\nI would like to acknowledge and give my warmest thanks to my beloved partner and newlywed husband Claudio. Without his insightful sociological and philosophical perspectives this project would not have been possible. Even though I began this research project years before meeting him his strong opinions and unique influencer preferences such as Omegaclick have greatly influenced and shaped its development. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister Tammara who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of mindful living has had a profoundly positive effect on my outlook and life experiences. In that vein I also want to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful I am aware and leading myself! You are doing good work; you are helping people. \nFinally I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making

nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive

framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media with platforms like Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nTo investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through

genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology.\nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with

their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts are new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. Furthermore he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into

its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's cognitive and emotional dimensions. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these

findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with these platforms can help to alleviate these risks fostering a more substantial and beneficial engagement with digital content. \nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating

authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that applying authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance despite his controversial beliefs and behaviors Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media

conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of an FBI agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns

on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media

which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\tLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\tBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\n\tThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content

strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\tThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.\nConclusion\n\tThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces. \n\tAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion he examines any project deeply quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical

application in the digital age providing insights grounded in established academic research. \nThe science behind the website including its focus on mindful engagement draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al. 2015). In light of these findings the website aims to promote positive and meaningful interactions prioritize authentic connections and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership which emphasize the importance of self-awareness ethical behavior and a commitment to the communal good (Gardner et al. 2005). The website serves as a manifestation of these principles offering users tools and strategies to engage with social media in ways that align with their values and promote positive ethical interactions.\nDespite the thoughtful construction and academic grounding of the website the initial reception from friends and family members while positive highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small familiar circle. Their responses which included encouraging remarks like "That's cool that you did that" were heartening but also revealed a critical challenge. The website's current reach is limited raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience.
\nReflections\nReflecting on the entirety of this project it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever this project also illuminated some critical areas of concern. Chief among them is the realization that without a substantial increase in followership or broader visibility the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and by extension the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable suggesting that the project as it currently stands could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally with a newfound awareness or mindful outset one becomes less susceptible to influence if one does not desire to be influenced and is of a more independent mind.\nThe author has also observed both anecdotally and through supported research (Northouse 2019) that a fundamental aspect of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity with authenticity being most effectively conveyed through genuine behavior (Kerfoot 2006).

Therefore anyone aspiring to gain influence as a leader or individual should prioritize self-discovery true self-expression and honest communication (Gardner et al. 2005; Berkovich 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies including more aggressive use of social media platforms search engine optimization (SEO) and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform offering not only static content but also interactive features such as webinars discussion forums and perhaps even online courses. These additions would not only increase user engagement but also provide a richer more immersive experience for those interested in the intersection of leadership and social media influence. Moreover by creating a community around the website it would be possible to foster a sense of shared purpose among users which could further enhance the project's impact.\nIn terms of sustainability the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally continuous feedback from users will be crucial in guiding the evolution of the website ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations &Conclusions\nFor future research on this topic there are additional avenues that merit consideration. Firstly investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality virtual reality and other evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online influence.\nAdditionally a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts.

Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion while this project has laid a solid foundation for exploring the relationship between leadership and social media it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a sustainable way there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott H. & Gentzkow M. through the lens of authentic leadership theories, with a focus on how platforms like Twitter and Instagram extend leaders' reach and enable the communication of their authenticity. Intended for academics, digital marketers, and leadership professionals, this study assesses the dual impact of these platforms on shaping public opinion and enhancing leaders' ability to connect authentically with their audiences. Utilizing a mixed-methods approach, the findings highlight the potential of social media to promote leadership authenticity while cautioning against risks such as misinformation and polarization. Recommendations advocate for a mindful engagement with digital content to leverage the positive aspects of social media in leadership practices effectively. Keywords: social media, authentic leadership, digital influence, ethical leadership, organizational leadership, leadership practices.\n\nAcknowledgment\nI would like to acknowledge and give my warmest thanks to my beloved partner and newlywed husband, Claudio. Without his insightful sociological and philosophical perspectives, this project would not have been possible. Even though I began this research project years before meeting him, his strong opinions and unique influencer preferences, such as Omegaclick, have greatly influenced and shaped its development. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister, Tammara, who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of mindful living has had a profoundly positive effect on my outlook and life experiences. In that vein, I also want to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful, I am aware and leading myself! You are doing good work; you are helping people. \nFinally, I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template, who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently, he is very hard to manipulate and very hard to influence, and as such, he is very hard to lead; he prefers to be in charge. Therefore, he is skilled in convincing people. He knows how to influence others and lead people because, as Northouse (2019) asserts, leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9, a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions, and 55% consider it their primary news source, according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition, I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership, practiced by social media influencers, aligns closely with authentic leadership theory, emphasizing transparency, ethics, and a focus on the communal good. Through their pervasive reach and often personal engagement with followers, these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous, reaching across all sectors of society. According to the Pew Research Center, approximately 72% of the U.S. public uses some type of social media, with varying impacts on social, political, and community engagement (Pew Research Center, 2021). The breadth of this influence spans across

diverse demographic groups, making nearly everyone a potential recipient of communicated messages, whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes, as seen with movements like #MeToo and #BlackLivesMatter, which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements, utilizing their platforms to amplify voices and call for action. For instance, prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement, leading to widespread discussions about sexual harassment and assault (Mendes et al., 2018).\nHowever, the risks involve the spread of misinformation and manipulating public opinion, which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates, where influencers have swayed public sentiment through both genuine and questionable means. For example, during the 2016 U.S. presidential election, false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow, 2017).\nThe individuals most impacted by this phenomenon include young adults, who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson, 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians, making them a key target for marketing and political messaging (Djafarova & Rushworth, 2017).\nIn addition to social movements and political implications, the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry, with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence, the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence, 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement, it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image, particularly among young women. For example, Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction, mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages, they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories, this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership, promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2, where theories of leadership and empirical studies on digital influence will be

synthesized to build a comprehensive framework for understanding leadership in the digital age. \n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media, such as TikTok and Twitter, as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally, he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion, a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet, 2023).\nOn July 21st, 2024, President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement, marking the first time in over fifty years that a sitting president refused their party's nomination, was made using the platform now known as X (Mason et al., 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere, gain followers, and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon, where social media shapes and reflects public opinions, is particularly significant when examined through authentic leadership theory. Authentic leadership, which emphasizes transparency, ethics, and a communal focus, aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media, with platforms like Facebook and YouTube leading the way (Auxier & Anderson, 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms, whether accurate or misleading. The impact of social media is evident in various sectors, from political engagement to social movements, economic trends, and mental health.\nTo investigate this phenomenon, data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles, books on leadership theories, and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook, Twitter, and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement, which gained momentum through a tweet by Alyssa Milano in 2017, exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson, 2018).\nIn addition to social movements, social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements, policy declarations, and real-time interaction with constituents. For instance, former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions, bypassing traditional media channels (Heilweil & Ghaffary, 2021). This direct communication method aligns with the principles of authentic leadership, where transparency and direct engagement are paramount.\nAuthentic leadership, as defined by Northouse (2019), is a process where an individual influences others to

achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo, advocating for societal values of justice and accountability (Mendes et al., 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online, fostering trust and loyalty among their followers. This trust is critical, enabling influencers to mobilize their audience for various causes, from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion, reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance, during the 2016 U.S. presidential election, social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow, 2017). Furthermore, the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse, leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry, with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence, the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence, 2021). As brands increasingly rely on influencers to reach consumers, the line between genuine endorsement and paid promotion blurs, raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences, prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence, it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk, where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow, 2017). Moreover, misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism, undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow, 2017), a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition, the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image, particularly among young women. For instance, Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction, mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore, it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully, actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked

with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve, understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\n\nCHAPTER 3: Literature Review\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts are new or if they add something to the literature, the author's fiance progresses boldly, expressing his thoughts unfiltered. Furthermore, he has opinions about everything! For example, the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these, any perception of authenticity one can glean from their social media has been crafted, designed, and molded to appear as such. The author\u2019s fiance often laments that nowadays, due to social media and internet culture, society's memory spans only about five years. He remarks that people often and easily forget what has come before, dooming all mistakes to be repeated. In contrast, fortunately, within academia, the effects and reach of social media, leadership, and authenticity have been studied and discussed at length. In this chapter, we will explore the various facets of authentic leadership, its application, and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty, where workers are demanding greater accountability and morality from their leadership, the need for authentic leadership is undeniable. As Northouse (2019) articulates, people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy, many of the greatest minds in academia, commerce, and science have studied, hypothesized, and postulated on its methodology, application, and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation, suggesting that these are fundamental components of authentic leadership development. According to their model, a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles, highlighting how authentic leaders are positive role models who consistently exhibit balanced processing, self-awareness, and transparency. Despite the lack of concrete examples, their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy, outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment, Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy, mutuality, and open-mindedness underscores the intricate nature of authentic leadership development, making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance, Donald Trump's wealth, outspokenness, and confidence in his opinions, despite being perceived as offensive by some, are revered by his followers. Beyond merely agreeing with his message, they admire his perceived authenticity, candidness, and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications

of authentic leadership have been examined through various lenses, offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's cognitive and emotional dimensions. While predominantly theoretical, their study is underpinned by credible sources, bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership, providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes, Rego et al. (2013) examine how authentic leadership, directly and indirectly, predicts team potency through the mediating role of team virtuousness and affective commitment. Their study, conducted at a Portuguese university with 59 teams, provides quantifiable results that suggest authentic leadership is associated with more virtuous, committed, and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes, a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive, high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities, the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation, the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights, while specific to educational leaders, have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions, offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes, Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study, conducted with supervisors and employees in the Pakistani Telecommunications sector, concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies, the presentation of quantifiable results lends credibility to the authors' conclusions, although a deeper analysis of the research leading to their hypotheses would have been beneficial.

This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\n\tCollectively, these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong, committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors, from education to corporate environments, and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book, "Authentic Leadership: Discover and Live Your Essential Mission," explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection, individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness, its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017), in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach," examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity, heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\n\tKerfoot (2006), in particular, bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing, where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence, one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research, offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice, demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity, making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership, illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with these platforms can help to alleviate these risks, fostering a more substantial and beneficial engagement with

digital content. \nBuilding on this foundation, Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions, a nurturing space is created, enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly, Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus, maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust, thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions, fostering a healthier and more aware community.\nFurthermore, authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement, transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively, research suggests that applying authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example, there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful, engaged, and content society. Through such leadership, a legacy of positive change is created, demonstrating that even in a digital era dominated by brief interactions, authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership, enabling leaders to communicate their authenticity to a broader audience. For instance, despite his controversial beliefs and behaviors, Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. This phenomenon aligns with research by Odii (2020), which discusses how social media allows leaders to reach a broader audience, influence public opinion, and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience, thereby reinforcing the leader's authenticity through transparency and direct engagement.\n\tBuilding on this, Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive, emotionally charged images are more effective in garnering social media activity, emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership, where emotional intelligence and engagement are crucial, demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the

influence of social bots and their coordination during online campaigns, emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion, presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity, which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders, providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership, demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover, the impact of social media on leadership reach is profound, as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially, a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However, the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism, discernment, and vigilance of an FBI agent surfing the web. His hyperfocus on evidence, facts, and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature, and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless, the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook, Instagram, Twitter, and TikTok have become integral to the daily lives of millions, fundamentally altering how individuals communicate, receive information, and form opinions. As highlighted in Chapter 1, the widespread use of social media, with 72% of the U.S. public actively engaging on these platforms, underscores its profound impact on social, political, and community engagement (Auxier & Anderson, 2021). However, this extensive reach also brings significant risks, including the spread of misinformation, manipulation of

public opinion, and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election, where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow, 2017).\nGiven these concerns, the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness, in this context, involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active, thoughtful engagement that prioritizes authenticity, truthfulness, and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye, thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health, particularly among young users. For instance, platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al., 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being, making it imperative to promote a more mindful approach to its use. By encouraging mindfulness, this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media, aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness, traditionally rooted in Eastern philosophical practices, has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption, mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions, often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership, which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness, individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively, where the distinction between authentic and manipulated content is often blurred.\n\tMindfulness practices also enhance cognitive focus and emotional regulation, which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found, authentic leadership, which shares many principles with mindfulness, positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media, where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement, reducing the likelihood of negative outcomes.\n\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being, as

emphasized by authentic leadership principles (Northouse, 2019). By cultivating mindfulness, users can develop a more critical and reflective approach to social media, which not only enhances their own experience but also contributes to a healthier, more constructive digital environment. This approach is crucial for countering the negative effects of social media, such as polarization and the spread of false information, by fostering a more informed and responsible public discourse.\n\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption, and by integrating mindfulness into social media use, this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership, this approach emphasizes self-awareness, ethical behavior, and critical thinking\u2014qualities that are essential for fostering a more informed, ethical, and constructive digital environment. This change is not only necessary but also timely, given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub, offering educational materials that promote mindfulness in the consumption of social media. At this stage, the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media, guides on achieving authenticity and mindfulness, and instructional content on mindfulness exercises specifically tailored for social media users.\n\tAdditionally, the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online, serving as practical examples for visitors to the site.\n\tWhile the initial launch of the website focuses on these resources, plans for future development include the addition of interactive features. A webinar is currently in development, aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\nLooking further ahead, the website may expand to include a community forum. This forum will provide a space for users to share experiences, challenges, and strategies related to mindful social media use, fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\nBy starting with a focus on educational resources and planning for gradual expansion, this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust, which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\nThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness, enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics, the website will track several indicators, including the number of visitors, page views, and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided

content. By analyzing trends over time, adjustments can be made to optimize the website's layout, content, and user interface to better meet the needs of the audience. Furthermore, these metrics will help determine the most and least popular sections of the website, guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics, qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform, making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers, offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content, ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies, the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time, applicable insights into how the platform influences users' social media habits over time, such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\nThe website leverages immediate, actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs, contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback, the website cultivates a responsive and user-centric experience, fostering a more mindful and intentional social media landscape.\nConclusion\nThe newly developed website is crafted to enhance mindfulness in social media use, addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\nAs the website continues to evolve, it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed, mindful, and ethical digital community. Looking ahead, the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion, he examines any project deeply, quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful, delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic, someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence, with a particular emphasis on promoting mindful

engagement with digital platforms. To achieve this, I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age, providing insights grounded in established academic research. \nThe science behind the website, including its focus on mindful engagement, draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being, particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al., 2015). In light of these findings, the website aims to promote positive and meaningful interactions, prioritize authentic connections, and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption, the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media, the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership, which emphasize the importance of self-awareness, ethical behavior, and a commitment to the communal good (Gardner et al., 2005). The website serves as a manifestation of these principles, offering users tools and strategies to engage with social media in ways that align with their values and promote positive, ethical interactions.\nDespite the thoughtful construction and academic grounding of the website, the initial reception from friends and family members, while positive, highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small, familiar circle. Their responses, which included encouraging remarks like "That's cool that you did that," were heartening but also revealed a critical challenge. The website's current reach is limited, raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience.
\nReflections\nReflecting on the entirety of this project, it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever, this project also illuminated some critical areas of concern. Chief among them is the realization that, without a substantial increase in followership or broader visibility, the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and, by extension, the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable, suggesting that the project, as it currently stands, could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices, she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally, with a newfound awareness or mindful outset, one becomes less susceptible to influence if one does not desire to be influenced and is of a more

independent mind.\nThe author has also observed, both anecdotally and through supported research (Northouse, 2019), that a fundamental aspect of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity, with authenticity being most effectively conveyed through genuine behavior (Kerfoot, 2006). Therefore, anyone aspiring to gain influence as a leader or individual should prioritize self-discovery, true self-expression, and honest communication (Gardner et al., 2005; Berkovich, 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors, leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However, the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals, as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward, several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost, efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies, including more aggressive use of social media platforms, search engine optimization (SEO), and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience, thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform, offering not only static content but also interactive features such as webinars, discussion forums, and perhaps even online courses. These additions would not only increase user engagement but also provide a richer, more immersive experience for those interested in the intersection of leadership and social media influence. Moreover, by creating a community around the website, it would be possible to foster a sense of shared purpose among users, which could further enhance the project's impact.\nIn terms of sustainability, the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally, continuous feedback from users will be crucial in guiding the evolution of the website, ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations\nFor future research on this topic, there are additional avenues that merit consideration. Firstly, investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore, exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality, virtual reality, and other

evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online influence.\nAdditionally, a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts. Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion, while this project has laid a solid foundation for exploring the relationship between leadership and social media, it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a sustainable way, there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding, and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott, H., & Gentzkow, M. Let\u2019s apply the rubric to the content provided:\n\n1. **Chapter 1 Introduction**: You have introduced the topic clearly, addressing both personal and social significance of social media\u2019s impact on leadership. You've outlined how the widespread use of social media influences societal norms, politics, and personal behaviors, which aligns well with the learning outcomes. **(50 pts)**\n\n2. **Chapter 2 Identification of Phenomenon**: This chapter effectively captures the social and personal significance of social media's role in modern leadership, particularly in political and societal contexts. The discussion on the dynamics of social media aligns with your degree program's focus on leadership, making it both personally and socially relevant. **(50 pts)**\n\n3. **Chapter 3 Literature Review**: Your review is robust, covering a range of theories and studies that support the relevance of your topic to the field of leadership within your degree program. The integration of authentic leadership theory in the context of social media is comprehensive and well-argued. **(50 pts)**\n\n4. **Chapter 4 Solutions**: You propose thoughtful, relevant solutions to the issues raised by social media in leadership, emphasizing mindfulness and ethical engagement online. This solution is relevant and applies directly to your field, suggesting practical steps for implementation. **(50 pts)**\n\n5. **Chapter 5 Reflections and Recommendations**: You offer a reflective conclusion and forward-looking recommendations that are closely tied to the themes and findings of your paper. This chapter effectively encapsulates the project\u2019s insights and future directions, maintaining relevance to your degree and the broader social context. **(50 pts)**\n\n6. **Inclusion of Sources and APA Formatting**: Assuming that the formatting adheres to APA guidelines as required and the sources (over 20) are appropriately cited throughout the paper. **(50 pts)**\n\n7. **Graduate Level Writing**: The excerpts display a high level of critical thinking, organization, and clarity consistent with graduate-level academic standards. **(50 pts)**\n\n8. **Implementation of Feedback**: If you have incorporated feedback from faculty or mentors as discussed, and this is reflected in the comprehensiveness and depth of your paper, this criterion would be met. **(50 pts)**\n\nFrom the sections you provided, it seems that your paper would score very highly, potentially achieving the full **400 pts** if all aspects

including formatting and feedback implementation are as they should be."]}, "status": "finished_successfully","end_turn": true

Throughout your capstone project, you have emphasized the role of mindfulness in leadership within the digital age. This reflects your deep understanding of self-awareness and the perspectives of others, especially in how leaders must interact in increasingly globalized and digital contexts. You can continue applying this understanding as you conduct further research and as you engage with diverse communities online, shaping discussions around ethical leadership and social media.\n - **Future Application:** As you aim to become a professional researcher, mindfulness can help you develop nuanced, culturally sensitive research questions that address underexplored areas within organizational leadership. This skill will also be vital in crafting thoughtful, inclusive, and effective research methodologies.\n\n2. **Ethical Leadership (PLO 6)**\n - **Current Application:** Your paper focuses on the ethical implications of social media in leadership, which is crucial for operating responsibly in positions of influence. By analyzing and advocating for ethical practices among social media influencers, you are preparing to uphold and promote integrity in all your future professional interactions.\n - **Future Application:** Ethical considerations will be central to your work as a researcher and future employee, ensuring that your practices contribute positively to your field and society. This PLO will guide you in choosing projects and collaborations that align with your ethical standards and in conducting research that can withstand moral scrutiny.\n\n3. **Strategic Communication (PLO 7)**\n - **Current Application:** The capstone project showcases your ability to effectively communicate complex ideas about leadership and social media\u2019s impact. This includes engaging various stakeholders through your proposed website and its resources.\n - **Future Application:** As you enter the professional research field, your communication skills will be critical in presenting findings, writing grant applications, and networking with other professionals. Enhancing these skills will help you articulate your research's impact and collaborate effectively on multidisciplinary projects.\n\n### PLOs for Continued Development\n\n1. **Strategic Planning (PLO 2)**\n - **Strategy for Improvement:** To strengthen your strategic planning abilities, you can volunteer to lead small projects in academic or community settings. Planning these projects from inception to completion will give you practical experience in applying strategic concepts. Additionally, engaging in workshops or online courses focused on strategic planning and project management can provide you with tools and methodologies to enhance your planning skills.\n\n2. **Conflict Resolution (PLO 5)**\n - **Strategy for Improvement:** Since you're currently not employed in a traditional setting where you might encounter organizational conflicts, consider participating in online forums or community groups where discussions often lead to differing opinions. Use these opportunities to practice mediating and resolving conflicts. Further, you might consider a certification in conflict resolution to deepen your understanding and skills in this area, which will be beneficial in both professional research and potential future employment scenarios.\n\n3. **Action Research (PLO 9)**\n - **Strategy for Improvement:** Continue to engage with your academic community by proposing or joining ongoing research projects. This hands-on approach will help you refine your ability to design, implement, and assess the impacts of action research projects. Additionally, attending seminars and workshops on action research methodologies can enhance your skills and understanding of different approaches.\n\nThese suggestions aim to leverage your current academic achievements while preparing you for future professional endeavors in research and beyond."]}, "status": "finished_successfully","end_turn": true

1725250969.351447, "update_time": null, "content": {"content_type": "text", "parts": ["Certainly! Considering your program's learning objectives and your current professional context as a student aspiring to become a professional researcher, here's a structured response that covers the three examples of PLO application, identifies areas for further development, and suggests strategies for skill-building:\n\n---\n\n**Application of Program Learning Objectives (PLOs) to Professional Context**\n\nAs I transition from academic pursuits to a professional research role, the mastery of specific Program Learning Objectives (PLOs) from my Master of Arts in Organizational Leadership is crucial. Here are three examples of how I will apply these PLOs to my future professional context:\n\n1. **Critical Thinking and Action Research (PLOs 1 and 9):**\n - *Application*: Throughout my capstone project, I developed a refined ability to analyze social media's impact on leadership. As a professional researcher, I will continue to employ these critical thinking skills to design and conduct studies that probe deeper into how digital platforms influence organizational dynamics and leadership effectiveness. This approach will not only help in publishing insightful research but also in providing actionable recommendations to improve organizational practices.\n - *Example*: Designing a research project to evaluate the effectiveness of different leadership styles in virtual teams within tech companies.\n\n2. **Strategic Communication and Ethical Leadership (PLOs 6 and 7):**\n - *Application*: In my future roles, whether in academia or industry, maintaining open, ethical communication will be vital. I will apply my understanding of ethical leadership to foster transparency and integrity in research findings, ensuring that all communications are clear, honest, and constructive, thereby building trust and credibility with stakeholders.\n - *Example*: Regularly presenting research findings to stakeholders and ensuring all data is communicated accurately to avoid misinterpretation and enhance decision-making processes.\n\n3. **Mindfulness (PLO 4):**\n - *Application*: The ability to apply mindfulness in understanding diverse perspectives is especially relevant in global research environments where collaboration across different cultures and disciplines is common. I plan to use mindfulness to enhance collaboration and foster an inclusive environment that respects all contributions, which is essential for innovative research.\n - *Example*: Conducting multicultural team meetings where all members are encouraged to share their insights, thus fostering a collaborative environment where diverse perspectives are valued.\n\n**PLOs for Further Development and Strategies for Skill-Building**\n\nWhile I have made progress in several areas, there are specific PLOs I aim to further develop:\n\n1. **Strategic Planning (PLO 2):**\n - *Current State*: As a student, my exposure to strategic planning has been limited to academic projects.\n - *Strategy for Development*: To enhance this skill, I plan to participate in webinars and workshops on strategic planning in professional settings, especially those offered by professional organizations in my field. Additionally, volunteering to assist in strategic planning in research projects or student organizations can provide practical experience.\n\n2. **Conflict Resolution (PLO 5):**\n - *Current State*: I have had limited real-world application of conflict resolution strategies.\n - *Strategy for Development*: I will seek opportunities to mediate and resolve conflicts in academic group projects and part-time roles. Participating in simulations and role-playing exercises during conflict resolution workshops will also be a practical way to enhance this skill.\n\n3. **Leadership Theories (PLO 8):**\n - *Current State*: While I have studied various leadership theories, applying them in a real-world context is a different challenge.\n -

Strategy for Development: To bridge this gap, I plan to join study groups and leadership forums where these theories are discussed in the context of current organizational challenges. Additionally, mentoring under a professor or an experienced researcher can provide insights into the practical application of these theories.\n\nBy actively engaging in these strategies, I aim to enhance my readiness for professional roles and contribute effectively in any research or organizational setting I join in the future. Through continuous learning and application of the Claremont Core values, I am committed to developing a well-rounded skill set that will aid in my professional development and career advancement.\n\n---\n\nThis response effectively ties your academic learnings to your future aspirations while acknowledging areas for growth and proposing practical steps for ongoing skill development."]}, "status": "finished_successfully","end_turn": true

Let's refine the answer to focus more specifically on your aspirations, the project management experience you've already gained, and the educational background at Claremont Lincoln University. Here\u2019s a revised response:\n\n---\n\n**Application of Program Learning Objectives (PLOs) to Professional Context**\n\nAs I transition from academic pursuits at Claremont Lincoln University towards my aspiration to become a professional researcher, integrating the Program Learning Objectives (PLOs) from my Master of Arts in Organizational Leadership is critical. Here\u2019s how I will leverage these PLOs, complemented by my hands-on project management experiences:\n\n1. **Critical Thinking and Action Research (PLOs 1 and 9):**\n   - *Application*: Drawing on my experience managing safety initiatives and amateur film projects, I plan to use my analytical skills to design and conduct studies focused on leadership dynamics within digital platforms. This approach will combine my project management experience with rigorous academic research methods.\n   - *Example*: Conducting a study on the effectiveness of digital communication tools in enhancing team collaboration and safety in workplace environments.\n\n2. **Strategic Communication and Ethical Leadership (PLOs 6 and 7):**\n   - *Application*: Leveraging my hands-on experience as a de facto project manager, I understand the importance of ethical communication. In my future roles, I will ensure that all communications are transparent and uphold ethical standards, which is fundamental for building trust in research and professional settings.\n   - *Example*: Developing communication strategies that ensure all team members are informed and engaged in project updates and decisions, fostering a culture of openness and accountability.\n\n3. **Mindfulness (PLO 4):**\n   - *Application*: Mindfulness has been a core component of my education at Claremont, influencing how I approach both academic and project work. In professional settings, I will apply mindfulness to enhance interpersonal interactions and decision-making processes, ensuring that all

team members feel respected and valued.\n - *Example*: Integrating mindfulness exercises into team meetings to improve focus, reduce stress, and enhance overall team performance, particularly in high-pressure project environments.\n\n**PLOs for Further Development and Strategies for Skill-Building**\n\nDespite having a solid foundation, there are areas I aim to develop further:\n\n1. **Strategic Planning (PLO 2):**\n - *Current State*: While I have managed smaller-scale projects, applying strategic planning on a larger scale is an area I wish to develop.\n - *Strategy for Development*: To enhance this skill, I will seek mentorship from experienced strategists in my network and engage in strategic planning workshops specifically tailored for research projects.\n\n2. **Conflict Resolution (PLO 5):**\n - *Current State*: My experience in conflict resolution is primarily from smaller team settings.\n - *Strategy for Development*: I plan to attend workshops and pursue a certification in conflict management to better understand and apply advanced strategies in diverse environments.\n\n3. **Leadership Theories (PLO 8):**\n - *Current State*: My engagement with leadership theories has been mostly theoretical during my studies.\n - *Strategy for Development*: Implementing leadership theories in practice by leading volunteer projects or community initiatives, allowing me to test and refine these theories in real-world settings.\n\nBy pursuing these strategies, I aim to bridge the gap between my current capabilities and the requirements of a professional researcher role, leveraging my education and experiences to make a meaningful impact in my future career.\n\n---\n\nThis response now more accurately reflects your current status, aspirations, and the concrete steps you plan to take to apply and further develop the skills associated with your program\u2019s learning objectives."]}, "status": "finished_successfully","end_turn": true

Here\u2019s how it could be structured:\n\n---\n\nAs I transition from the academic environment of Claremont Lincoln University towards my aspiration of becoming a professional researcher, the

integration of the Program Learning Objectives (PLOs) from my Master of Arts in Organizational Leadership becomes increasingly vital. My journey thus far has been greatly influenced by these objectives, which shape how I envision my future in the professional realm.\n\nMy approach to critical thinking and action research, fostered through Claremont's emphasis on analytical skills, has prepared me to undertake comprehensive studies in organizational leadership. Drawing on my direct experience managing safety initiatives and amateur film projects, I plan to design and conduct research that explores leadership dynamics within digital platforms. For example, I could conduct a study evaluating the effectiveness of digital communication tools to enhance team collaboration and safety in workplace environments, utilizing my project management skills to ensure rigorous and methodical research execution.\n\nSimultaneously, my hands-on experience as a de facto project manager has instilled a deep appreciation for strategic communication and ethical leadership. In my future roles, I am committed to maintaining transparency and upholding ethical standards in all communications. This commitment is crucial for building trust in both research and professional settings. Developing strategies that ensure all team members are consistently informed and actively engaged in project updates will foster a culture of openness and accountability, which are cornerstones of effective leadership.\n\nMoreover, the core value of mindfulness, a central tenet of my education at Claremont, will be integral as I navigate professional interactions and decision-making processes. By integrating mindfulness exercises into routine team meetings, I aim to improve focus, reduce stress, and enhance overall team performance, especially in high-pressure environments. This mindful approach will ensure that all team members feel respected and valued, which is essential for fostering a collaborative and productive workplace atmosphere.\n\nDespite these strengths, there are areas where I seek further development to fully realize my potential as a leader in research. Strategic planning, particularly on a larger scale, is an area I wish to enhance. I plan to seek mentorship from experienced strategists within my network and engage in targeted strategic planning workshops, which will equip me with the tools necessary for effective decision-making in complex research projects. Additionally, my background in managing smaller teams has provided a foundation in conflict resolution, but mastering this skill in diverse and larger settings remains a goal. Attending advanced conflict management workshops and pursuing relevant certifications will enable me to effectively manage and leverage conflicts in varied environments.\n\nFurthermore, while I have a strong theoretical understanding of leadership theories from my studies, applying these theories in real-world settings presents a unique challenge. Leading volunteer projects or community initiatives will allow me to put these theories to the test, providing valuable insights that can refine my leadership approach.\n\nIn conclusion, my educational journey at Claremont Lincoln University has not only equipped me with a robust framework of skills and knowledge but also instilled a commitment to continuous improvement and ethical practice. By actively pursuing opportunities for growth and applying the principles I have learned, I am preparing myself for a successful career in research, where I can contribute meaningfully to the field of organizational leadership. This proactive approach to personal and professional development ensures that I will remain adaptable and effective, regardless of the challenges that lie ahead.\n\n---\n\nThis narrative format maintains the flow from one idea to the next, building on each concept without the use of lists, and ensuring a coherent and comprehensive exploration of how the

PLOs influence your professional development."]}, "status": "finished_successfully","end_turn": true

Leading volunteer projects or community initiatives will allow me to put these theories to the test, providing valuable insights that can refine my leadership approach.\n\nIn conclusion, my educational journey at Claremont Lincoln University has not only equipped me with a robust framework of skills and knowledge but also instilled a commitment to continuous improvement and ethical practice. By actively pursuing opportunities for growth and applying the principles I have learned, I am preparing myself for a successful career in research, where I can contribute meaningfully to the field of organizational leadership. This proactive approach to personal and professional development ensures that I will remain adaptable and effective, regardless of the challenges that lie ahead.", "request_id": "8bcad2cb4baf0e22-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "eb5fc89b-ba62-4aee-990c-6939526221b0", "children": ["3c26bba4-af0d-435b-91b5-c0ca06e0506b"]}, "3c26bba4-af0d-435b-91b5-c0ca06e0506b": {"id": "3c26bba4-af0d-435b-91b5-c0ca06e0506b", "message": {"id": "3c26bba4-af0d-435b-91b5-c0ca06e0506b", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1725252041.802774, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8bcad2cb4baf0e22-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null, "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa21455-a5a4-4876-a35f-9d7ce1620503", "children": ["5ab6e315-2817-4103-8347-9a060df86925"]}, "5ab6e315-2817-4103-8347-9a060df86925": {"id": "5ab6e315-2817-4103-8347-9a060df86925", "message": {"id": "5ab6e315-2817-4103-8347-9a060df86925", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1725252064.912267, "update_time": null, "content": {"content_type": "text", "parts": ["The response effectively addresses the question about applying Program Learning Objectives (PLOs) to your professional context and outlines areas for further development with specific strategies for skill-building. Here\u2019s a breakdown of how well it answers the question:\n\n### Strengths of the Response:\n1. **Direct Application of PLOs**: The narrative clearly illustrates how you plan to apply specific PLOs to your future role as a professional researcher. It shows a direct link between your academic learnings and potential professional applications, particularly in critical thinking, strategic communication, and ethical leadership.\n \n2. **Specific Examples**: The response provides specific examples of how these skills can be translated into actions, such as conducting research on digital communication tools in workplace environments and integrating mindfulness exercises in team settings.\n\n3. **Future Development**: You effectively outline the PLOs you aim to develop further, such as strategic planning and conflict resolution, and provide concrete strategies for development, including seeking mentorship and attending workshops.\n\n4. **Integration of Personal Experiences**: You weave in your personal experiences, like managing safety initiatives and amateur film projects, to show how these have prepared you for more substantial roles, adding a personal touch that ties your past experiences to your future aspirations.\n\n### Areas for Enhancement:\nWhile the response is comprehensive, making it more impactful involves sharpening the connection between your aspirations and the specific PLOs. Here are a few suggestions:\n\n1.

Link to Professional Research: More explicitly state how each PLO will directly influence your effectiveness and capabilities as a researcher, not just in general professional terms. For example, explain how strategic planning will help you in designing and managing large-scale research projects or how conflict resolution skills are essential when collaborating with diverse research teams.\n\n2. **More Detailed Future Strategies**: While you mention attending workshops and seeking mentorships, adding more detail could strengthen this section. Consider specifying the types of projects or research areas you aim to explore and how these will help in mastering the PLOs you are still developing.\n\n3. **Immediate Steps**: Since you are currently transitioning and looking for employment, mention any immediate steps you are taking to reach these goals. For instance, you could talk about current applications to research positions or networking efforts to find mentorship opportunities within the fields of interest.\n\nBy focusing on these enhancements, you can make your response not only a reflection of your past achievements and current capabilities but also a strategic plan for achieving your future goals as a professional researcher. This approach ensures a cohesive narrative that aligns with your professional aspirations and the requirements of your academic program."]}, "status": "finished_successfully","end_turn": true

Let's focus on how the Program Learning Objectives have already influenced your academic approach and how they are shaping your methodology, thinking, and planning for your future career in research.\n\n---\n\nThrough my journey at Claremont Lincoln University in the Master of Arts in Organizational Leadership program, the Program Learning Objectives (PLOs) have profoundly reshaped my academic approach and personal methodology, setting a foundation for my future endeavors in the field of research. These PLOs have not only refined my skills but also fundamentally altered my way of thinking and planning for a career centered around innovative leadership and ethical research practices.\n\nStrategic communication and ethical leadership have been pivotal in changing how I approach academic projects and future professional interactions. By integrating these PLOs into my studies, I have learned the importance of clear, transparent communication and the ethical implications that underpin every decision. This realization has cultivated a more conscientious approach to my research, ensuring that integrity and accountability are at the forefront of my work. These principles will guide me as I transition to a professional research role, where ethical dilemmas

and the need for clear communication are prevalent.\n\nMindfulness, another key learning objective, has significantly influenced my leadership style and personal demeanor. Previously, I might have overlooked the subtler aspects of team dynamics or personal stress management. Now, I integrate mindfulness practices into my daily routine, enhancing my focus and emotional resilience. This transformation is especially beneficial in academic settings where group projects and deadlines are common, and will undoubtedly be invaluable in high-pressure research environments where thoughtful leadership can drive team success.\n\nLastly, the emphasis on critical thinking and action research within the PLOs has revolutionized my approach to the Capstone Action Project. This project is not just an academic requirement but a practical application of all I have learned. By employing rigorous analytical methods, I am not only aiming to fulfill academic criteria but also to contribute genuine insights into leadership practices in the digital age. The project reflects my evolved understanding of how thorough research can lead to actionable solutions, a mindset I will carry into my future research career.\n\nIn summary, the PLOs from Claremont Lincoln University have equipped me with a holistic toolkit that extends beyond traditional academic learning. They have prepared me to think critically, act ethically, and lead mindfully. As I conclude my studies and look towards a career in research, I feel confident that the changes in my approach, methodology, and way of thinking, fostered by these objectives, will enable me to make meaningful contributions to my field and effectively implement change wherever my career may lead."]}, "status": "finished_successfully","end_turn": true

You can start by review this article on Creating Video Presentations.Links to an external site.\n\nThis video should include:\n\nA brief introduction of yourself\nAn explanation of your topic and relevance. \nAn overview of the problem you are addressing\nA brief review of literature\nA brief discussion of the solution you have developed\nDiscussion of the impact and/or implications of your project\nYour video should be between 8-12 minutes total.\n\nWhen you have completed recording your video recording, upload your video to Canvas. You may also upload the video to a file sharing site (such as YouTube) and submit the link.\n\nwhat video making software that does like what invideo does would you reccomend? or should I try canva? do you want to write a script for me?do you have enough info to do so?"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8bcaf4cc691a0dc5-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "e99790ec-e1de-472c-a6a0-b2dcce28a217", "children": ["55efeb89-1e26-4214-84ac-02357b74bdc7"]}, "55efeb89-1e26-4214-84ac-02357b74bdc7": {"id": "55efeb89-1e26-4214-84ac-02357b74bdc7", "message": {"id": "55efeb89-1e26-4214-84ac-02357b74bdc7", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1725253465.057036, "update_time": null, "content": {"content_type": "text", "parts": ["Great to hear that you're preparing for a video presentation on your Capstone project! I can definitely help you draft a script for your presentation. Since you mentioned video-making software, both InVideo and Canva are excellent choices as they offer user-friendly interfaces and plenty of features to create a professional-looking video. Canva, in particular, is quite accessible for beginners and provides templates specifically for presentations, which might be helpful for structuring your Capstone project video.\n\n### Script for Video Presentation\nHere\u2019s a draft script for your video presentation, tailored to fit within an 8-12 minute timeframe:\n\n---\n\n**Introduction (30 seconds)**\n- "Hello and welcome! My name is [Your Name], and I'm a graduate student at Claremont Lincoln University, currently completing my Master of Arts in Organizational Leadership. Today, I'm excited to share with you my Capstone project, which explores the significant role of social media in shaping contemporary leadership."\n\n**Topic Explanation and Relevance (1 minute)**\n- "The focus of my project is on how social media platforms like Twitter and Instagram influence leadership practices today. This topic is highly relevant as digital communication continues to reshape how leaders interact and influence their followers, particularly in the context of authenticity and ethical leadership."\n\n**Overview of the Problem (1 minute)**\n- "The primary problem my project addresses is the challenge leaders face in maintaining authenticity while effectively leveraging social media to engage and inspire their audiences. With the rise of digital platforms, leaders are navigating complex dynamics of transparency, ethics, and public perception."\n\n**Literature Review (2 minutes)**\n- "My research included a thorough review of existing literature on leadership theories, particularly authentic leadership, and the impact of social media on leadership

practices. Scholars like Northouse and Gardner have discussed the intricacies of authentic leadership, which aligns closely with the transparent and personal nature of social media interactions."\n- "Studies indicate that while social media offers tremendous opportunities for leaders to connect with their audience, it also poses risks such as misinformation and the potential for misinterpretation."\n\n**Discussion of the Solution (2 minutes)**\n- "To address these challenges, I developed a solution centered around the concept of 'mindful leadership'. This involves training leaders to use social media in a way that promotes transparency and maintains their authenticity. The solution includes practical guidelines for mindful communication and strategies to enhance digital engagement without compromising ethical standards."\n\n**Impact and Implications (2 minutes)**\n- "The implications of my project are significant for both academic and practical applications. For organizations, implementing these mindful leadership practices can lead to more genuine and effective leadership, enhancing organizational culture and employee engagement. Academically, my findings contribute to the ongoing discussions on integrating ethical practices into digital leadership strategies."\n\n**Conclusion (1 minute)**\n- "In conclusion, my Capstone project not only sheds light on the evolving role of social media in leadership but also provides a framework for leaders to adapt to these changes in a mindful and ethical manner. I believe the insights from this project can guide current and future leaders to harness the power of digital platforms while staying true to their core values."\n\n**Closing (30 seconds)**\n- "Thank you for watching my presentation. I look forward to discussing these ideas further and exploring their practical applications in various leadership contexts. Please feel free to reach out with questions or for more information. Have a great day!"\n\n---\n\nThis script structures your presentation to fit within the required timeframe while covering all the necessary elements. As for the video-making software, if you're comfortable with Canva, it's a good choice to start with since it provides a straightforward platform for creating visually appealing presentations. If you need any adjustments or additional details in the script, feel free to ask!"]}, "status": "finished_successfully","end_turn": true

"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8bcaf82679910dc5-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "55efeb89-1e26-4214-84ac-02357b74bdc7", "children": ["893ca517-5a2b-4bcd-8a5b-45c87f4f4a2c"]}, "893ca517-5a2b-4bcd-8a5b-45c87f4f4a2c": {"id": "893ca517-5a2b-4bcd-8a5b-45c87f4f4a2c", "message": {"id": "893ca517-5a2b-4bcd-8a5b-45c87f4f4a2c", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1725253592.135613,

"update_time": null, "content": {"content_type": "text", "parts": ["For your video presentation, incorporating imagery can significantly enhance viewer engagement and comprehension. Here\u2019s how you can approach finding and using imagery effectively:\n\n### Types of Imagery to Consider:\n1. **Infographics**: Create simple infographics to illustrate key points, such as statistics from your literature review or components of your solution. These can help in visually explaining complex ideas.\n2. **Charts and Graphs**: Use charts and graphs to present any quantitative data you have collected or researched. This could include data on social media usage among leaders, impact measurements, or survey results.\n3. **Photos and Icons**: Use thematic photos and icons to add visual interest and support the topic. For instance, images depicting leaders using social media, icons representing different social media platforms, or images that convey leadership and authenticity.\n4. **Screenshots**: If your project includes specific social media examples or case studies, screenshots can be very effective. They provide a direct visual reference to the points you are discussing.\n\n### Sources for Imagery:\n- **Canva**: Offers a vast library of photos, icons, and elements that you can use to create infographics and enhance your slides. It\u2019s also excellent for designing custom graphics.\n- **Unsplash and Pixabay**: Both provide high-quality, free-to-use photos that you can download and include in your presentation without worrying about licensing.\n- **Google Charts or Microsoft Excel**: Ideal for creating custom charts and graphs that can then be imported into your presentation slides.\n- **Flaticon or Iconfinder**: Great resources for finding icons that can visually represent concepts like 'leadership', 'social media', 'ethics', and more.\n\n### Tips for Using Imagery:\n- **Keep It Relevant**: Ensure each image directly relates to the content being discussed at that moment in the presentation.\n- **Maintain Consistency**: Use a consistent style and color scheme for all your visuals to keep the presentation cohesive.\n- **Quality Over Quantity**: It\u2019s better to use a few well-chosen images than to clutter your slides with too much visual content that might distract from your main points.\n- **Legibility**: Make sure any text in your infographics is large enough to be easily readable when displayed in video format.\n\n### Incorporating Imagery into Your Video:\n- **Intro and Outro**: Use a strong, relevant image or a short video clip related to leadership and social media at the beginning and end of your presentation to create a professional impression.\n- **Transitions**: Consider using visual transitions between sections that might include soft background images or thematic icons to smoothly transition viewers through different segments of your presentation.\n\nBy thoughtfully incorporating these types of visuals, you can significantly enhance the effectiveness of your presentation, making it more engaging and easier to follow."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AAAAAAAAA", "parent_id": "aaa2dfa2-1c36-4c50-ae52-82ffaf452f33", "request_id": "8bcaf82679910dc5-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa2dfa2-1c36-4c50-ae52-82ffaf452f33", "children": ["aaa229a4-22cc-4e35-9e6a-6289b00a6f67"]}, "aaa229a4-22cc-4e35-9e6a-6289b00a6f67": {"id": "aaa229a4-22cc-4e35-9e6a-6289b00a6f67", "message": {"id": "aaa229a4-22cc-4e35-9e6a-6289b00a6f67", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1725253698.932301, "update_time": null, "content": {"content_type": "text", "parts": ["Okay Can you create infographics for all the statistics referenced in chapter 1?"]},

Intended for academics digital marketers and leadership professionals this study assesses the dual impact of these platforms on shaping public opinion and enhancing leaders' ability to connect authentically with their audiences. Utilizing a mixed-methods approach the findings highlight the potential of social media to promote leadership authenticity while cautioning against risks such as misinformation and polarization. Recommendations advocate for a mindful engagement with digital content to leverage the positive aspects of social media in leadership practices effectively. Keywords: social media authentic leadership digital influence ethical leadership organizational leadership leadership practices.\n\nAcknowledgment\nI would like to acknowledge and give my warmest thanks to my beloved partner and newlywed husband Claudio. Without his insightful sociological and philosophical perspectives this project would not have been possible. Even though I began this research project years before meeting him his strong opinions and unique influencer preferences such as Omegaclick have greatly influenced and shaped its development. I am grateful for his influence and mindful of its significance.\nI would like to thank my sister Tammara who has always encouraged and supported me in my educational undertakings. Her introduction to the concept of

mindful living has had a profoundly positive effect on my outlook and life experiences. In that vein I also want to thank Claremont Lincoln University and the handful of influencers who have focused their influence on promoting mindfulness. When I am mindful I am aware and leading myself! You are doing good work; you are helping people. \nFinally I would like to thank God. I agree with the anonymous author of the acknowledgment sample in the capstone project template who wrote:\n\n\u201cYou are the one who let me finish my degree. I will keep on trusting you for my future.\u201d \n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson

2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age. \n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics

and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is pervasive and profound. Approximately 72% of the U.S. public uses social media with platforms like Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nTo investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Reputable institutions such as the Pew Research Center provided statistical data on social media usage and its societal impacts.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with

consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\n\nCHAPTER 3: Literature Review\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts are new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. Furthermore he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where

workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost and their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into authentic leadership's cognitive and emotional dimensions. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders directly impact their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic

leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents

authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in nursing where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field. She emphasizes that authenticity must be perceived by followers to be effective. Kerfoot (2006) illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate cultivating a genuine online following. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a broader audience. It is essential to acknowledge that social media carries various risks. Purposeful and conscientious interaction with these platforms can help to alleviate these risks fostering a more substantial and beneficial engagement with digital content. \nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore authentic leadership's influence extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that applying authentic leadership principles

provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach mitigates the potential negative impacts of social media and harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance despite his controversial beliefs and behaviors Donald Trump is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must

navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of an FBI agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance regarding external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the

negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.\nDevelopment of a Mindfulness-Oriented Platform\nThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on

mindfulness exercises specifically tailored for social media users.\tAdditionally the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\nLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\nBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.\nWebsite Measurements\nThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.\nQuantitative Measurements\nWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.\nQualitative Feedback\nIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.\nFeedback from Long-Time Users\n\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\nThe website leverages

immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.\nConclusion\nThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\nAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\nThe author\u2019s fiance can sometimes be fatalistic about the future and often believes in conspiracy theories regarding the past. As a discerning person with a mindset of suspicion he examines any project deeply quickly revealing its flaws and shortcomings. The author\u2019s fiance makes critique an art form\u2014a careful delicate work that begins with observation and research. This project was conceived in a similar manner. The author criticized social media influencers but was fascinated by their reach and ability to impress even the most staunch critic someone much like the author's fiance.\nThe goal of this project was to explore the intersection of leadership and social media influence with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age providing insights grounded in established academic research. \nThe science behind the website including its focus on mindful engagement draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al. 2015). In light of these findings the website aims to promote positive and meaningful interactions prioritize authentic connections and provide valuable resources for fostering a healthy online environment. By advocating for balanced and mindful digital consumption the website seeks to empower users to cultivate a more positive relationship with social media and prioritize their mental well-being.\nBy offering a platform where users can learn about the psychological and social impacts of social media the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership which emphasize the importance of self-awareness ethical behavior and a commitment to the communal good (Gardner et al. 2005). The website serves as a manifestation of these principles offering users tools and strategies to engage with social media in ways that align with their values and promote positive ethical interactions.\nDespite the thoughtful construction and academic grounding of the website the initial reception from friends and family members while positive highlighted a significant limitation:

the project\u2019s impact has thus far been confined to a small familiar circle. Their responses which included encouraging remarks like "That's cool that you did that" were heartening but also revealed a critical challenge. The website's current reach is limited raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience. \nReflections\nReflecting on the entirety of this project it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. \nHowever this project also illuminated some critical areas of concern. Chief among them is the realization that without a substantial increase in followership or broader visibility the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and by extension the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable suggesting that the project as it currently stands could be considered unsuccessful if it does not achieve greater reach.\nThe author conjects that any opportunity for learning comes with an opportunity for growth. As this project began to take shape and the author discovered more and more of the parallels between social media influence and authentic leadership principles and practices she became aware of the insidious ways in which social media was influencing her thoughts and biases. Naturally with a newfound awareness or mindful outset one becomes less susceptible to influence if one does not desire to be influenced and is of a more independent mind.\nThe author has also observed both anecdotally and through supported research (Northouse 2019) that a fundamental aspect of leadership is the ability to influence others. This influence is significantly bolstered by perceived authenticity with authenticity being most effectively conveyed through genuine behavior (Kerfoot 2006). Therefore anyone aspiring to gain influence as a leader or individual should prioritize self-discovery true self-expression and honest communication (Gardner et al. 2005; Berkovich 2014)\nSuch realization prompted critical self-engagement regarding the author's own unmindful social media behaviors leading to the application of researched principles to personal life \u2014 thus making the website a manifestation of this introspective journey. The website aims to offer tools for individuals to emulate this path and cultivate mindfulness and authenticity in their lives.\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals as the impact of a well-crafted message is contingent upon its dissemination.\nMoving forward several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies including more aggressive use of social media platforms search engine optimization

(SEO) and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience thereby ensuring that the message of mindful engagement does not go unheard.\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform offering not only static content but also interactive features such as webinars discussion forums and perhaps even online courses. These additions would not only increase user engagement but also provide a richer more immersive experience for those interested in the intersection of leadership and social media influence. Moreover by creating a community around the website it would be possible to foster a sense of shared purpose among users which could further enhance the project's impact.\nIn terms of sustainability the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide a revenue stream to support these activities. Additionally continuous feedback from users will be crucial in guiding the evolution of the website ensuring that it remains relevant and responsive to the needs of its audience.\nRecommendations\nFor future research on this topic there are additional avenues that merit consideration. Firstly investigating the long-term effects of social media influencer campaigns on attitudes and behaviors could offer valuable insights into the lasting impact of their influence. Understanding the sustained influence of social media on individuals and society as a whole can help in designing more informed and responsible strategies for leveraging social media for positive change.\nFurthermore exploring the role of emerging social media platforms and technologies in shaping online behavior and influence could provide a fresh perspective. Researching the impact of augmented reality virtual reality and other evolving technologies on social media influence can provide valuable data for understanding and adapting to the changing landscape of online influence.\nAdditionally a comparative analysis of influencer strategies across different cultural and demographic groups could uncover insights into the effectiveness of specific approaches within diverse contexts. Understanding how social media influence varies across cultures and demographics can aid in tailoring strategies for promoting mindful engagement and positive change in a culturally sensitive manner.\nConclusion\nIn conclusion while this project has laid a solid foundation for exploring the relationship between leadership and social media it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement and by scaling the project in a sustainable way there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field.\n\nReferences\nAllcott H. & Gentzkow M. Let me continue where we left off.\n\n---\n\n**CHAPTER 5: Reflections and Recommendations**\n\n**Project Summary** \nThe primary goal of this project was to explore the intersection of leadership and social media influence, particularly focusing on promoting mindful engagement with social media. To achieve this, I conducted extensive research and synthesized my findings into a website designed to serve as a resource for individuals interested in these topics. My friends and family members who visited the website responded positively, with comments like "That's cool that you did that," indicating an appreciation for the effort and content, though engagement beyond this immediate circle has been limited.\n\n**Reflections** \nReflecting on the entirety of the project, several key insights emerged. One of the most rewarding aspects was seeing previous research come together to form a cohesive and meaningful project. It was gratifying to create something tangible that could potentially influence others in the realm of leadership and social media. However, the project also faced significant challenges. A major concern is the limited reach and impact of the website. If the site does not gain a

broader audience or increase its follower base, the message may not reach its intended audience, rendering the effort less effective. This raises concerns about whether the authenticity and core message of the project are being communicated effectively.\n\nThe project\u2019s strengths include a well-researched foundation and the successful creation of a website that can serve as a long-term platform for content related to leadership and mindful social media engagement. However, the primary weakness lies in its current lack of visibility and engagement, which may hinder its ability to fulfill its purpose.\n\n**Recommendations/Conclusions** \nTo address the weaknesses and build upon the strengths of this project, several next steps are recommended:\n\n1. **Increase Visibility and Engagement:** The immediate next step should be to develop strategies to increase the website\u2019s visibility. This could involve leveraging social media platforms more effectively, collaborating with influencers or thought leaders in the field, or using search engine optimization (SEO) techniques to ensure the website reaches a broader audience.\n\n2. **Content Expansion and Diversification:** Future efforts could focus on expanding the content available on the website. Regularly updated blogs, videos, and interactive content could attract more visitors and keep them engaged. Offering guest posts or interviews with experts in leadership and social media could also add value and credibility to the site.\n\n3. **Scalability:** The project has the potential to be scalable, especially if the content continues to grow and diversify. Scaling could involve creating a community around the website, possibly through forums, webinars, or workshops. Additionally, partnerships with educational institutions or organizations interested in leadership development could help scale the project further.\n\n4. **Sustainability:** For the project to be sustainable, it will need ongoing content updates, user engagement, and possibly funding or sponsorships. Building a subscriber base or offering premium content could be a way to generate revenue to support ongoing efforts.\n\n5. **Future Research Recommendations:** Future researchers could explore more deeply how leadership and social media influence intersect in specific industries or demographic groups. They could also investigate the effectiveness of different strategies for promoting mindful social media engagement. Addressing the current project\u2019s limitations, such as expanding outreach strategies, could provide valuable insights for similar future initiatives.\n\nIn conclusion, while the project has successfully laid the groundwork for exploring the relationship between leadership and social media, it must overcome challenges related to visibility and engagement to truly realize its potential. By implementing the recommended strategies, the project could grow into a significant resource for those interested in mindful social media use and leadership in the digital age.\n\n--- \n\nThis draft can be tailored further based on any specific details or insights you may have from the attachment or additional reflections."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "auto", "pad": "AAAAAAAAAAAAAAAAAAAA", "parent_id": "aaa255b2-3a82-4fcc-a0f2-ba6f7f6c239b", "request_id": "8bb643fa49594c52-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa255b2-3a82-4fcc-a0f2-ba6f7f6c239b", "children": ["aaa229d5-142c-4cf8-8c12-3a2cd2577793"]}, "aaa229d5-142c-4cf8-8c12-3a2cd2577793": {"id": "aaa229d5-142c-4cf8-8c12-3a2cd2577793", "message": {"id": "aaa229d5-142c-4cf8-8c12-3a2cd2577793", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1725036697.674652, "update_time": null, "content": {"content_type":

He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo

movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50%

of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their

audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). .As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts or new or if they add something to the literature the author's fiance progresses

boldly expressing his thoughts unfiltered. And he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research

indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership

in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field emphasizing that authenticity must be perceived by followers to be effective. Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\tGardner et al. (2005) provide a foundational framework of authentic leadership illustrating mechanisms that facilitate the cultivation of a genuine following online. Adhering to principles of authentic leadership and living within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a wider audience. However it's crucial to recognize that social media also poses several risks. Mindful engagement with these platforms can mitigate such risks promoting a more meaningful and healthy interaction with digital content.\nBuilding on this foundation Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions a nurturing space is created enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is

significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions fostering a healthier and more aware community.\nFurthermore the influence of authentic leadership extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively research suggests that the application of authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach not only mitigates the potential negative impacts of social media but also harnesses its power to foster a more mindful engaged and content society. Through such leadership a legacy of positive change is created demonstrating that even in a digital era dominated by brief interactions authenticity and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance Donald Trump despite his controversial beliefs and behaviors is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of

social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of a CIA agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance of external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active

thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers

users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.Development of a Mindfulness-Oriented Platform\tThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\tLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\tBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.Website Measurements\tThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.Quantitative Measurements\tWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.Qualitative Feedback\tIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers

offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.Feedback from Long-Time Users\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\tThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.Conclusion\tThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\tAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social media and fake news in the 2016 election. explore the intersection of leadership and social media influence, with a particular emphasis on promoting mindful engagement with social media. To achieve this, I conducted extensive research that culminated in the creation of a website intended to serve as a resource for those interested in understanding and practicing mindful social media use. This site was designed to bridge the gap between leadership theory and practical application in the digital age, offering insights that could guide individuals in navigating the complexities of online influence. The initial reception from friends and family members, while positive, highlighted the limited reach of the project so far. Their responses, though encouraging, underscored a critical challenge: the project's impact remains confined to a small circle, raising concerns about its broader relevance and effectiveness.\n\nReflecting on the entirety of this project, it is clear that there were both significant achievements and notable challenges. One of the most fulfilling aspects was witnessing the convergence of my past research into a cohesive and practical resource. This process not only reinforced the value of academic inquiry but also demonstrated the potential of applying theoretical knowledge in a real-world context. However, this project also illuminated some critical areas of concern. Chief among them is the realization that, without a substantial increase in followership or broader visibility, the website may fail to communicate its message effectively. This would mean that the core objective of promoting mindful engagement with social media\u2014and, by extension, the authentic leadership that should underpin such engagement\u2014might not be realized. The fear of my efforts falling on deaf ears is palpable, suggesting that the project, as it currently stands, could be considered unsuccessful if it does not achieve greater reach.\n\nThe project's strengths lie in its well-researched foundation and the successful creation of a website that has the potential to serve as an educational tool. The process of synthesizing various strands of leadership theory and applying them to the modern digital landscape was intellectually rewarding and provided a solid basis for further work in this area. However, the weaknesses are equally apparent. The primary issue is the website's limited visibility and the associated risk that its message will not reach the intended audience. This lack of engagement could ultimately undermine the project's goals, as the impact of a well-crafted message is contingent upon its dissemination.\n\nMoving forward, several steps can be taken to address these challenges and enhance the project's effectiveness. First and foremost, efforts should be made to increase the website's visibility. This could be achieved through a combination of strategies, including more aggressive use of social media platforms, search engine optimization (SEO), and possibly collaborations with influencers or thought leaders in the field. These actions would help to expand the website's reach and attract a broader audience, thereby ensuring that the message of mindful engagement does not go unheard.\n\nAnother important consideration is the scalability of the project. The website has the potential to grow into a more comprehensive platform, offering not only static content but also interactive features such as webinars, discussion forums, and perhaps even online courses. These additions would not only increase user engagement but also provide a richer, more immersive experience for those interested in the intersection of leadership and social media influence. Moreover, by creating a community around the website, it would be possible to foster a sense of shared purpose among users, which could further enhance the project's impact.\n\nIn terms of sustainability, the project will require ongoing effort and possibly financial investment to maintain and expand its offerings. The development of a subscriber base or the introduction of premium content could provide

a revenue stream to support these activities. Additionally, continuous feedback from users will be crucial in guiding the evolution of the website, ensuring that it remains relevant and responsive to the needs of its audience.\n\nFor future researchers interested in this topic, there are several avenues worth exploring. One potential area of study could involve a deeper investigation into the specific mechanisms through which social media influencers exert their leadership. Understanding these dynamics could provide valuable insights for those looking to leverage social media for positive change. Additionally, future projects could focus on developing more effective strategies for promoting mindful engagement, particularly among younger audiences who are most susceptible to the influence of social media.\n\nIn conclusion, while this project has laid a solid foundation for exploring the relationship between leadership and social media, it is clear that more work needs to be done to realize its full potential. By addressing the challenges of visibility and engagement, and by scaling the project in a sustainable way, there is a strong possibility that the website could become a significant resource for those interested in leadership and mindful social media use. The journey from conception to execution has been both challenging and rewarding, and it is my hope that the lessons learned will serve as a valuable guide for future efforts in this field."]}, "status": "finished_successfully","end_turn": true

Here\u2019s the revised and expanded version of the paragraph, now divided into two distinct paragraphs with additional discussion and a citation from your sources:\n\n---\n\nThe goal of this project was to explore the intersection of leadership and social media influence, with a particular emphasis on promoting mindful engagement with digital platforms. To achieve this, I conducted extensive research that culminated in the creation of a website aimed at serving as a resource for individuals seeking to understand and practice mindful social media use. The website was meticulously designed to bridge the gap between leadership theory and its practical application in the digital age, providing insights grounded in established academic research. By offering a platform where users can learn about the psychological and social impacts of social media, the site aspires to guide individuals in navigating the complexities of online influence. This approach is not just theoretical; it is underpinned by the principles of authentic leadership, which emphasize the importance of self-awareness, ethical behavior, and a commitment to the communal good (Gardner et al., 2005). The website serves as a manifestation of these principles, offering users tools and strategies to engage with social media in ways that align with their values and promote positive, ethical interactions.\n\nDespite the thoughtful construction and academic grounding of the website, the initial reception from friends and family members, while positive, highlighted a significant limitation: the project\u2019s impact has thus far been confined to a small, familiar

circle. Their responses, which included encouraging remarks like "That's cool that you did that," were heartening but also revealed a critical challenge. The website's current reach is limited, raising concerns about its broader relevance and effectiveness in achieving its intended goals. This issue underscores the importance of not only creating high-quality content but also ensuring that it reaches and resonates with a wider audience. The science behind the website, including its focus on mindful engagement, draws from psychological studies that demonstrate how social media can profoundly impact mental health and well-being, particularly through mechanisms like social comparison and the internalization of unrealistic standards (Fardouly et al., 2015). Without broader dissemination, the valuable insights provided by the website risk being underutilized, which could limit its potential to effect meaningful change in the way users interact with social media.\n\n---\n\nThis version provides a more in-depth discussion of the website's theoretical foundations and its practical implications, while also introducing a relevant citation to support your points."]}, "status": "finished_successfully","end_turn": true

He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging

the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political

engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). .As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising

methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts or new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. And he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes

for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations

(TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how

authentic leadership can be applied in the nursing profession where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field emphasizing that authenticity must be perceived by followers to be effective. Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it \nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance Donald Trump despite his controversial beliefs and behaviors is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of

followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of a CIA agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance of external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body

dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.Development of a Mindfulness-Oriented Platform\tThe project will initially focus on the development of a website dedicated

to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the <LINK> website hosts a selection of social media posts that exemplify mindful engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\tLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\tBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.Website Measurements\tThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.Quantitative Measurements\tWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.Qualitative Feedback\tIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.Feedback from Long-Time Users\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding

the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\tThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.Conclusion\tThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\tAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social media and fake news in the 2016 election. The project explores how social media influences contemporary leadership, particularly through the lens of authentic leadership theory. It examines the impact of social media on public opinion, societal values, and even mental health, while proposing solutions to foster mindful engagement with social media.\n\nFrom what I can see, the project is well-researched and delves deeply into the intersection of leadership and social media. It highlights both the potential benefits, like increased awareness for social causes, and the risks, such as misinformation and polarization. The document seems to suggest that mindful engagement with social media could mitigate some of these risks, offering a proactive approach to

how we consume and interact with content online.\n\nIf you were asking for feedback or thoughts on specific sections or aspects of the document, feel free to let me know, and I can dive deeper into those areas."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "auto", "pad": "AAAAAAAAAAAAAAAAAAAAAAAAAAAAAA", "parent_id": "d84b67fc-1332-47b3-ba3c-c8ef896df2c7", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "request_id": "8ba6c2695e740e9f-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "d84b67fc-1332-47b3-ba3c-c8ef896df2c7", "children": ["aaa25f36-ad51-43e2-b0d8-68701f6c393d"]}, "aaa25f36-ad51-43e2-b0d8-68701f6c393d": {"id": "aaa25f36-ad51-43e2-b0d8-68701f6c393d", "message": {"id": "aaa25f36-ad51-43e2-b0d8-68701f6c393d", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724873979.950443, "update_time": null, "content": {"content_type": "text", "parts": ["In chapter three, can you offer a synthesis of the literarty works mentioned there that aligns with the overal documents message and themes?"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8ba6c4c4fb615a07-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "618e7675-1076-4761-b926-9563afcc5767", "children": ["0e646c05-4a31-4c5e-b6e4-ae75bad16965"]}, "0e646c05-4a31-4c5e-b6e4-ae75bad16965": {"id": "0e646c05-4a31-4c5e-b6e4-ae75bad16965", "message": {"id": "0e646c05-4a31-4c5e-b6e4-ae75bad16965", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724874029.651847, "update_time": null, "content": {"content_type": "text", "parts": ["Certainly! Chapter three of your capstone project appears to focus on the theoretical foundations of authentic leadership and its intersection with social media as a tool for leadership and change. Below is a synthesis of the literary works mentioned in this chapter, aligned with the overall themes and message of your project.\n\n### Synthesis of Literature in Chapter Three\n\n#### Authentic Leadership: Core Concepts and Applications\n\nThe literature on authentic leadership discussed in Chapter Three revolves around understanding and applying authentic leadership in various contexts, particularly in the digital age where social media plays a significant role in shaping leadership perceptions. **Northouse's (2019)** definition of authentic leadership, which emphasizes transparency, ethics, and communal focus, serves as the theoretical backbone of your project. This aligns with your overall argument that social media influencers can be seen as contemporary leaders who embody, or at least project, the principles of authentic leadership.\n\n**Gardner et al. (2005)** provide a foundational understanding by proposing a self-based model that emphasizes self-awareness and self-regulation as key components of authentic leadership. This is crucial when considering social media influencers, who must be perceived as genuine and ethical to maintain their influence. The model suggests that a leader\u2019s personal history and reflective practices are central to developing authentic leadership qualities, which can be extended to social media influencers who build their narratives and authenticity online.\n\n**Berkovich (2014)** further expands on this by incorporating dialogical pedagogy into authentic leadership development. His emphasis on empathy, mutuality, and open-mindedness enhances the understanding of how authentic leaders engage with their followers\u2014traits that are essential for influencers who wish to maintain a genuine connection with their audience.\n\n#### Practical Applications and

Implications\n\nThe practical application of authentic leadership is explored through various lenses, offering insights into how it can influence individual and group outcomes. **Qian et al. (2016)** focus on the cognitive and emotional mechanisms behind feedback-seeking behavior in leader-follower relationships, highlighting how authentic leadership can foster open communication and continuous improvement\u2014parallels can be drawn to how influencers interact with their followers on social media.\n\n**Rego et al. (2013)** examine the impact of authentic leadership on team potency, mediated by team virtuousness and affective commitment. This study's findings suggest that authentic leadership not only influences individuals but also enhances group dynamics and collective outcomes. This resonates with the idea that influencers, when perceived as authentic, can inspire collective action and foster strong community engagement, as seen in movements like #MeToo.\n\n**Hsieh and Wang (2015)** and **Mehmood et al. (2016)** contribute to understanding the influence of authentic leadership on trust, engagement, and performance. Their findings underscore the importance of followers' perceptions of their leader's authenticity, which directly impacts their engagement and productivity. In the context of social media, this highlights the critical role of perceived authenticity in maintaining an influencer's credibility and effectiveness in driving social change.\n\n#### Bridging Theory and Practice\n\nThe works of **Blekkingh (2015)** and **Wulffers (2017)** bridge the gap between theory and practical application. They provide accessible models and guides for achieving authenticity, emphasizing self-reflection and the importance of purpose. These practical insights complement the theoretical frameworks discussed earlier and are particularly relevant for social media influencers who must continuously reflect on and adapt their practices to maintain authenticity.\n\n**Kerfoot (2006)** offers a profession-specific perspective by discussing authentic leadership in nursing, arguing that a leader\u2019s authenticity is ultimately defined by followers' perceptions. This aligns closely with the challenges faced by social media influencers, where the perception of authenticity is key to their influence and success.\n\n#### The Role of Social Media in Enhancing Authentic Leadership\n\nFinally, the role of social media in enhancing and challenging authentic leadership is a critical theme in your project. **Odii (2020)** and **Harkins et al. (2023)** discuss how social media can amplify a leader's perceived authenticity and influence, but also highlight the ethical challenges posed by digital platforms. The works collectively emphasize that while social media offers unprecedented opportunities for leaders to connect with their audience, it also requires careful navigation to maintain authenticity and ethical standards.\n\n### Conclusion\n\nThe synthesis of these literary works aligns with the overarching theme of your project: that social media influencers, when embodying the principles of authentic leadership, can serve as powerful contemporary leaders. However, the literature also cautions that the digital landscape poses significant challenges to maintaining authenticity, making it imperative for influencers to engage mindfully and ethically. This synthesis reinforces your project\u2019s focus on promoting mindful social media engagement as a means to foster authentic, effective leadership in the digital age."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "auto", "pad": "AAAAAAAAAAAAAAAA", "parent_id": "aaa25f36-ad51-43e2-b0d8-68701f6c393d", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "request_id": "8ba6c4c4fb615a07-MXP", "timestamp_": "absolute"}, "recipient": "all",

Here\u2019s how we can narratively streamline the connection between the literary works mentioned in Chapter Three and the framework you've outlined:\n\n### Narrative Progression: From Self-Leadership to Influential Authenticity\n\n**Stage 1: Self-Discovery and Self-Leadership**\n- **Gardner et al. (2005):** The foundational model proposed by Gardner et al. emphasizes self-awareness and self-regulation as pivotal for developing authentic leadership. This aligns with the initial stage of an influencer finding the leader within. In the context of social media, this translates to influencers reflecting on their personal values and histories, essential for crafting genuine narratives that resonate with their audience.\n- **Blekkingh (2015):** Offers practical exercises for discovering one\u2019s essential mission, thereby facilitating deeper self-discovery. This supports influencers in defining what makes them unique and how to remain true to that identity amidst the pressures of a consumerist, capitalistic environment.\n\n**Stage 2: Ethical Foundations and Authentic Engagement**\n- **Berkovich (2014):** Incorporates a dialogical approach to leadership development, emphasizing empathy and open-mindedness. For an influencer, this means engaging in ethical ways that reflect their true self, promoting authenticity through interactions that foster genuine connections.\n-

Kerfoot (2006): Discusses how authenticity is perceived by others, highlighting the importance of how influencers\u2019 actions are viewed by their followers. This stage involves building trust through consistent, transparent practices that align with their values and the expectations of their audience.\n\n**Stage 3: Influencing Others and Fostering Community**\n- **Hsieh and Wang (2015)** and **Mehmood et al. (2016):** These studies underline the impact of perceived authenticity on followers\u2019 trust and engagement. For influencers, this stage is about utilizing their platform to not only promote products or ideas but to foster a community that values authenticity, leading followers towards self-awareness and mindfulness.\n- **Qian et al. (2016)** and **Rego et al. (2013):** These works illustrate how authentic leadership enhances group dynamics and outcomes. Influencers can use their authentic stance to influence consumer behavior positively, encouraging followers to make mindful, conscious choices rather than succumbing to the endless cycle of consumption promoted by capitalism.\n\n**Stage 4: Navigating Capitalism with Authenticity**\n- **Wulffers (2017):** Offers a practical guide on achieving authentic leadership within teams. Influencers can apply these principles to navigate the capitalist framework effectively, promoting products or lifestyles that align with genuine needs and sustainable practices, rather than exploiting consumer vulnerabilities.\n- **Odii (2020) and Harkins et al. (2023):** Discuss the role of social media in enhancing a leader\u2019s reach but also the ethical considerations required. For influencers, this means balancing the commercial aspects of their platform with the need to remain genuine and ethical, influencing consumption patterns towards more sustainable and fulfilling choices.\n\n### Conclusion\nThis narrative progression illustrates how each piece of literature supports a stage in the journey of an influencer aspiring to authentic leadership within a capitalist society. It begins with personal reflection and self-leadership, progresses through ethical engagement and influence, and culminates in a balanced approach to capitalism that promotes mindful consumption. By focusing on genuine self-representation and ethical practices, influencers can foster a culture of authenticity that counters the endless dissatisfaction often fueled by consumerism, ultimately leading to a more mindful and content society."]}, "status": "finished_successfully","end_turn": true

The story is about consuming social media mindfully to minimize any negative effects and, as leaders, guiding our followers towards mindful engagement with all experiences, thus using our influence to positively impact the lives of our followers. Authentic leadership is the theory that seems to resonate well with both the current reality and the one we aspire to create. Therefore it was beneficial to establish its alignment with our topic and also to give evidence to the inherent leadership by default that occurs within the social media influencer-follower paradigm"]}, "status": "finished_successfully",

"end_turn": null, "weight": 1.0, "metadata": {"request_id": "8ba809dd9e8e5a0d-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "46697b1a-5610-444c-a438-577c07e80de1", "children": ["5b62d644-62d0-4090-937e-4e2755814cd0"]}, "5b62d644-62d0-4090-937e-4e2755814cd0": {"id": "5b62d644-62d0-4090-937e-4e2755814cd0", "message": {"id": "5b62d644-62d0-4090-937e-4e2755814cd0", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724887320.286815, "update_time": null, "content": {"content_type": "text", "parts": ["Certainly! Let's refine the narrative to emphasize authentic leadership and mindful engagement on social media, focusing on how influencers can positively impact their followers by modeling and promoting these behaviors:\n\n### Refined Narrative Progression: Authentic Leadership in the Digital Age\n\n**Stage 1: Self-Awareness and Authentic Foundation**\n- **Gardner et al. (2005):** Their model underscores the importance of self-awareness and self-regulation. For social media influencers, this stage involves deep personal reflection to understand their core values and beliefs. This self-awareness is crucial in establishing an authentic online presence that genuinely reflects who they are, rather than conforming to external expectations.\n- **Blekkingh (2015):** Provides practical methods for individuals to discover and articulate their mission, helping influencers to solidify their authentic voice. This clarity allows them to engage with social media in ways that align with their true selves, setting the foundation for genuine leadership.\n\n**Stage 2: Ethical Engagement and Building Trust**\n- **Berkovich (2014):** Emphasizes empathy and open dialogue in leadership development. Influencers can apply these principles by fostering honest and empathetic interactions with their audience, creating a space where followers feel valued and understood.\n- **Kerfoot (2006):** Highlights that authenticity is judged by followers. This stage focuses on maintaining consistent, transparent practices that resonate with authenticity, helping to build trust and loyalty among followers.\n\n**Stage 3: Influencing and Inspiring Mindful Engagement**\n- **Hsieh and Wang (2015)** and **Mehmood et al. (2016):** These studies show how authentic leadership enhances engagement and performance by fostering trust. Influencers can use their platforms to encourage followers to engage with social media mindfully, promoting habits that minimize the negative effects of digital consumption.\n- **Qian et al. (2016)** and **Rego et al. (2013):** Discuss the broader impact of authentic leadership on group dynamics. Influencers can leverage their influence to promote positive social interactions and community-building, guiding followers towards more mindful and meaningful online experiences.\n\n**Stage 4: Leading by Example in a Digital Community**\n- **Wulffers (2017):** Offers practical advice on applying authentic leadership in group settings. For influencers, this means using their reach to advocate for and model behaviors that emphasize the health and well-being of their community, like promoting digital detoxes or highlighting content that enriches rather than depletes.\n- **Odii (2020) and Harkins et al. (2023):** Examine the power of social media to amplify a leader\u2019s reach while also presenting ethical challenges. Influencers must navigate these challenges by prioritizing the well-being of their followers, using their platform to foster a culture of authenticity and responsible consumption of media.\n\n### Conclusion\nThis narrative emphasizes the role of social media influencers as authentic leaders who can guide their followers towards a more mindful and positive engagement with digital content. By grounding their influence in authentic leadership principles and ethical engagement, influencers have the opportunity to shape digital interactions that enhance the well-being of their community. This approach not only mitigates the

negative effects of social media but also uses these platforms as a force for good, demonstrating how leadership can thrive in a digital context and create a reality that encourages personal growth and mindful living."]}, "status": "finished_successfully","end_turn": true

"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8ba814a2df0374e6-FCO", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "5b62d644-62d0-4090-937e-4e2755814cd0", "children": ["79e7e34c-8b6d-4680-84fb-8d5b32782941"]}, "79e7e34c-8b6d-4680-84fb-8d5b32782941": {"id": "79e7e34c-8b6d-4680-84fb-8d5b32782941", "message": {"id": "79e7e34c-8b6d-4680-84fb-8d5b32782941", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724887765.730892, "update_time": null, "content": {"content_type": "text", "parts": ["### Embracing Authentic Leadership in the Digital Realm\n\nIn the dynamic interplay of social media and leadership, the concept of authentic leadership, as detailed by Gardner et al. (2005), offers a foundational lens through which influencers can cultivate a genuine presence online. This theory posits that self-awareness and self-regulation are crucial for leaders to authentically represent themselves, resonating deeply with those looking to build an authentic online identity. Influencers embarking on this path must engage in profound personal reflection to understand and articulate their core values, thereby aligning their public persona with their true selves. This alignment is not just about personal integrity but is also pivotal in establishing a trustworthy relationship with followers, as authenticity in leadership hinges significantly on the perception of genuineness and ethical behavior.\n\nBuilding on these concepts, Berkovich (2014) introduces the significance of empathy and open dialogue in fostering authentic interactions. This approach is especially relevant for social media influencers, who operate within platforms that thrive on constant communication and engagement. By prioritizing empathy in their interactions, influencers can create a nurturing space for their followers, which not only enhances the sense of community but also reinforces the trust and loyalty necessary for long-term engagement. Similarly, Kerfoot (2006) highlights that the authenticity perceived by followers fundamentally shapes the influence leaders hold. Therefore, influencers need to maintain consistent and transparent practices that reflect their genuine

selves, which in turn strengthens their leadership and community bonds.\n\nAs influencers establish their authenticity, they also shoulder the responsibility of guiding their audience towards more mindful social media engagement. This responsibility is underlined by the research of Hsieh and Wang (2015) and Mehmood et al. (2016), who show how authentic leadership can enhance engagement and trust, thereby positively influencing followers' behavior. Influencers can leverage this trust to promote healthier digital consumption habits, encouraging their followers to interact with social media in a way that enriches rather than diminishes their well-being. This form of leadership is not just about influencing followers but inspiring them to adopt a mindful approach to their digital interactions, thus fostering a healthier, more aware community.\n\nMoreover, the influence of authentic leadership extends beyond individual interactions to shape community dynamics, as discussed by Qian et al. (2016) and Rego et al. (2013). These scholars provide insights into how authentic leadership can foster more cohesive and supportive group environments. For influencers, this means using their platforms to not only promote products or personal brands but also to cultivate an environment that supports positive social interactions and meaningful community engagement. In doing so, influencers can transform their social media spaces into hubs of positive influence and collective well-being.\n\nIn conclusion, the role of social media influencers as contemporary leaders is increasingly significant, and the application of authentic leadership principles offers a robust framework for navigating this space ethically and effectively. By grounding their online presence in authenticity and leading by example, influencers have the unique opportunity to mold not only the perceptions and behaviors of their followers but also the broader social dynamics of the digital age. This approach not only mitigates the potential negative impacts of social media but also harnesses its power to foster a more mindful, engaged, and content society. Through such leadership, influencers can create a legacy of positive change, demonstrating that even in a digital era dominated by brief interactions and swift engagements, authenticity and mindfulness can profoundly influence and improve the collective experience."]}, "status": "finished_successfully","end_turn": true

I LIKE ALL THE FACTUAL BITS AND ASSERTIONS, BUT THE SCENE NEEDS TO BE SET BET. IT MIGHT BE A LITTLE BETTER IF IT STARTS OFF LIKE THIS: Gardner et al. (2005) provide the foundational framework of authentic leadership, which illustrates the mechanisms by which social media influencers gain and cultivate a following online. By adhering to the principles of authentic leadership and living authentically within your purpose, social media can be a valuable tool to transmit this authenticity, thereby reaching a wider audience. However, social media poses several risks. Mindful engagement with social media can fully mitigate these risks. One way social media influencers can positively impact

their communities is by promoting mindful engagement with social media and with life in general."]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"targeted_reply": "In the dynamic interplay of social media and leadership, the concept of authentic leadership, as detailed by Gardner et al. (2005), offers a foundational lens through which influencers can cultivate a genuine presence online. This theory posits that self-awareness and self-regulation are crucial for leaders to authentically represent themselves, resonating deeply with those looking to build an authentic online identity. Influencers embarking on this path must engage in profound personal reflection to understand and articulate their core values, thereby aligning their public persona with their true selves. This alignment is not just about personal integrity but is also pivotal in establishing a trustworthy relationship with followers, as authenticity in leadership hinges significantly on the perception of genuineness and ethical behavior.", "request_id": "8baaf4cbdff8ba99-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "79e7e34c-8b6d-4680-84fb-8d5b32782941", "children": ["749fe7a0-ff66-4fd5-ba9f-5adc1c415009"]}, "749fe7a0-ff66-4fd5-ba9f-5adc1c415009": {"id": "749fe7a0-ff66-4fd5-ba9f-5adc1c415009", "message": {"id": "749fe7a0-ff66-4fd5-ba9f-5adc1c415009", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1724917891.371816, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8baaf4cbdff8ba99-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null, "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa291ec-a1be-48c9-b646-192b663664c9", "children": ["474ce0ce-50c1-4344-8d3b-86348e0c73d4"]}, "474ce0ce-50c1-4344-8d3b-86348e0c73d4": {"id": "474ce0ce-50c1-4344-8d3b-86348e0c73d4", "message": {"id": "474ce0ce-50c1-4344-8d3b-86348e0c73d4", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724917925.392103, "update_time": null, "content": {"content_type": "text", "parts": ["### Embracing Authentic Leadership in the Digital Realm\n\nGardner et al. (2005) provide the foundational framework of authentic leadership, which illustrates the mechanisms by which social media influencers gain and cultivate a following online. By adhering to the principles of authentic leadership and living authentically within your purpose, social media can be a valuable tool to transmit this authenticity, thereby reaching a wider audience. However, social media poses several risks. Mindful engagement with social media can fully mitigate these risks. One way social media influencers can positively impact their communities is by promoting mindful engagement with social media and with life in general.\n\nBuilding on this foundation, Berkovich (2014) emphasizes the significance of empathy and open dialogue in fostering authentic interactions. This approach is especially relevant for social media influencers, who operate within platforms that thrive on constant communication and engagement. By prioritizing empathy in their interactions, influencers can create a nurturing space for their followers, which not only enhances the sense of community but also reinforces the trust and loyalty necessary for long-term engagement. Similarly, Kerfoot (2006) highlights that the authenticity perceived by followers fundamentally shapes the influence leaders hold. Therefore, influencers need to maintain consistent and transparent practices that reflect their genuine selves, which in turn strengthens their leadership and community bonds.\n\nAs influencers establish their authenticity, they also shoulder the responsibility of guiding their audience towards more mindful social media engagement. This responsibility is underlined by the research of Hsieh

and Wang (2015) and Mehmood et al. (2016), who show how authentic leadership can enhance engagement and trust, thereby positively influencing followers' behavior. Influencers can leverage this trust to promote healthier digital consumption habits, encouraging their followers to interact with social media in a way that enriches rather than diminishes their well-being. This form of leadership is not just about influencing followers but inspiring them to adopt a mindful approach to their digital interactions, thus fostering a healthier, more aware community.\n\nMoreover, the influence of authentic leadership extends beyond individual interactions to shape community dynamics, as discussed by Qian et al. (2016) and Rego et al. (2013). These scholars provide insights into how authentic leadership can foster more cohesive and supportive group environments. For influencers, this means using their platforms to not only promote products or personal brands but also to cultivate an environment that supports positive social interactions and meaningful community engagement. In doing so, influencers can transform their social media spaces into hubs of positive influence and collective well-being.\n\nIn conclusion, the role of social media influencers as contemporary leaders is increasingly significant, and the application of authentic leadership principles offers a robust framework for navigating this space ethically and effectively. By grounding their online presence in authenticity and leading by example, influencers have the unique opportunity to mold not only the perceptions and behaviors of their followers but also the broader social dynamics of the digital age. This approach not only mitigates the potential negative impacts of social media but also harnesses its power to foster a more mindful, engaged, and content society. Through such leadership, influencers can create a legacy of positive change, demonstrating that even in a digital era dominated by brief interactions and swift engagements, authenticity and mindfulness can profoundly influence and improve the collective experience."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "auto", "pad": "AAAAAAAAAAAAAAAAAAAAAAAAA", "parent_id": "749fe7a0-ff66-4fd5-ba9f-5adc1c415009", "request_id": "8baaf4cbdff8ba99-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "749fe7a0-ff66-4fd5-ba9f-5adc1c415009", "children": ["aaa2afbc-2d66-4797-be94-a09b72e6b7f1"]}, "aaa2afbc-2d66-4797-be94-a09b72e6b7f1": {"id": "aaa2afbc-2d66-4797-be94-a09b72e6b7f1", "message": {"id": "aaa2afbc-2d66-4797-be94-a09b72e6b7f1", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724918565.359772, "update_time": null, "content": {"content_type": "text", "parts": ["DON'T LEAVE OUT ALL THE GOOD INFO HERE. yOU JUST DON'T NEED TO CLAIM WHO IT MIGHT RESONATE WITH. iN FACT WE DON'T NEED TO REPEATEDLY MENTIONN INFLUENCERS, MAYBE ITS A BIT OVERKILL? He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence

process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to

influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st

century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). Furthermore the viral nature of social media can amplify certain viewpoints and contribute to the polarization of public discourse leading to the formation of echo chambers and the spread of disinformation.\nThe economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). .As brands increasingly rely on influencers to reach consumers the line between genuine endorsement and paid promotion blurs raising questions about the authenticity of influencer content. This shift towards influencer-based marketing strategies reflects a broader change in how companies connect with their audiences prioritizing perceived authenticity over traditional advertising methods.\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover misinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of

false information can create widespread confusion and skepticism undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions (Allcott & Gentzkow 2017) a tactic that has only grown in sophistication with advancements in digital technology. \nIn addition the adverse influences of social media extend to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. Therefore it is crucial to be mindful of one's social media consumption and to approach the ideas presented in social media mindfully actively using one's critical thinking skills to help navigate the complex digital landscape and mitigate the potential negative impact of social media on mental well-being.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts or new or if they add something to the literature the author's fiance progresses boldly expressing his thoughts unfiltered. And he has opinions about everything! For example the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these any perception of authenticity one can glean from their social media has been crafted designed and molded to appear as such. The author\u2019s fiance often laments that nowadays due to social media and internet culture society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework

remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance Donald Trump's wealth outspokenness and confidence in his opinions despite being perceived as offensive by some are revered by his followers. Beyond merely agreeing with his message they admire his perceived authenticity candidness and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical their study is underpinned by credible sources bolstering its assertions. \nTheir research indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh

and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\tCollectively these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\tKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional

settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field emphasizing that authenticity must be perceived by followers to be effective. Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it \nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance Donald Trump despite his controversial beliefs and behaviors is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case

of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\nThe author\u2019s fiance approaches social media with the skepticism discernment and vigilance of a CIA agent surfing the web. His hyperfocus on evidence facts and supporting information makes it difficult to misinform him. His keen and observant eye can spot inauthenticity from a mile away. Mindfulness is baked into his very nature and so many of the dangers of social media use are mitigated by his skepticism and vigilance of external influences.\nNevertheless the influence of social media on societal norms and individual behaviors has reached an unprecedented level in the contemporary digital age. Platforms such as Facebook Instagram Twitter and TikTok have become integral to the daily lives of millions fundamentally altering how individuals communicate receive information and form opinions. As highlighted in Chapter 1 the widespread use of social media with 72% of the U.S. public actively engaging on these platforms underscores its profound impact on social political and community engagement (Auxier & Anderson 2021). However this extensive reach also brings significant risks including the spread of misinformation manipulation of public opinion and the creation of echo chambers that reinforce pre-existing beliefs. These risks were starkly illustrated during the 2016 U.S. presidential election where misinformation campaigns on social media played a pivotal role in shaping voter perceptions and behaviors (Allcott & Gentzkow 2017).\nGiven these concerns the change proposed in this project centers on fostering a more mindful engagement with social media. Mindfulness in this context involves being fully present and aware while interacting with social media content. This approach encourages users to critically evaluate the motives behind the content they encounter and reflect on how it influences their thoughts and actions. The overarching goal is to shift from passive consumption to active thoughtful engagement that prioritizes authenticity truthfulness and constructive dialogue. Such a shift is crucial for mitigating the negative impacts of social media by empowering users to approach content with a critical eye thereby fostering a more informed and discerning public.\nThis change is further emphasized by the social and psychological implications of social media use. Research demonstrates that social media can significantly affect mental health particularly among young users. For instance platforms like Instagram have been shown to contribute to body dissatisfaction and low self-esteem due to the internalization of the thin ideal and appearance comparison tendencies (Fardouly et al. 2015). These findings highlight that social media's influence extends beyond public opinion to individual well-being making it imperative to promote a more mindful approach to its use. By encouraging mindfulness this project aims to enhance critical thinking skills and reduce the negative emotional and psychological effects associated with social media aligning with broader goals of promoting mental health and well-being in an increasingly

digital world.\nTheoretical Foundation for Mindfulness\nMindfulness traditionally rooted in Eastern philosophical practices has gained significant recognition in psychological and organizational contexts for its benefits in enhancing cognitive and emotional regulation. When applied to social media consumption mindfulness can serve as a powerful tool in resisting the manipulative and often emotionally charged content that proliferates on these platforms. This practice is particularly important in a digital landscape where content is designed to evoke quick reactions often bypassing critical thought.\nThe concept of mindfulness is deeply intertwined with the principles of authentic leadership which emphasizes self-awareness and ethical behavior. Gardner et al. (2005) underscore that self-awareness and self-regulation are fundamental components of authentic leadership\u2014principles that are equally critical when engaging with social media. By fostering self-awareness individuals can better recognize the intent behind social media content and engage with it in a way that aligns with their values and ethical standards. This mindful approach enables users to navigate the digital landscape more effectively where the distinction between authentic and manipulated content is often blurred.\tMindfulness practices also enhance cognitive focus and emotional regulation which are vital in resisting the impulsive reactions that social media content frequently elicits. As Mehmood et al. (2016) found authentic leadership which shares many principles with mindfulness positively influences followers by enhancing their learning orientation and self-regulation. This is particularly relevant in the context of social media where impulsive sharing and emotional reactions can exacerbate the spread of misinformation. Encouraging users to approach social media content mindfully promotes a more deliberate and thoughtful engagement reducing the likelihood of negative outcomes.\tIntegrating mindfulness into social media use also aligns with the broader objectives of promoting ethical behavior and fostering communal well-being as emphasized by authentic leadership principles (Northouse 2019). By cultivating mindfulness users can develop a more critical and reflective approach to social media which not only enhances their own experience but also contributes to a healthier more constructive digital environment. This approach is crucial for countering the negative effects of social media such as polarization and the spread of false information by fostering a more informed and responsible public discourse.\tThe theoretical foundation for promoting mindfulness in social media engagement is well-established. The pervasive influence of social media necessitates a critical approach to its consumption and by integrating mindfulness into social media use this project empowers users to navigate the digital landscape responsibly. Grounded in the principles of mindfulness and authentic leadership this approach emphasizes self-awareness ethical behavior and critical thinking\u2014qualities that are essential for fostering a more informed ethical and constructive digital environment. This change is not only necessary but also timely given the growing concerns about the impact of social media on individual well-being and societal norms.Development of a Mindfulness-Oriented Platform\tThe project will initially focus on the development of a website dedicated to fostering mindful social media use. This website serves as a resource hub offering educational materials that promote mindfulness in the consumption of social media. At this stage the website primarily features a curated collection of links to various resources. These resources include articles on the psychological effects of social media guides on achieving authenticity and mindfulness and instructional content on mindfulness exercises specifically tailored for social media users.\tAdditionally the <LINK> website hosts a selection of social media posts that exemplify mindful

engagement. These posts demonstrate how users can maintain authenticity and mindfulness in their interactions online serving as practical examples for visitors to the site.\tWhile the initial launch of the website focuses on these resources plans for future development include the addition of interactive features. A webinar is currently in development aimed at deepening users' understanding of mindfulness techniques and their application to social media use. This webinar will provide live instruction and the opportunity for participants to engage directly with experts in the field of digital wellness.\tLooking further ahead the website may expand to include a community forum. This forum will provide a space for users to share experiences challenges and strategies related to mindful social media use fostering a supportive online community. The addition of this forum will depend on user engagement and feedback collected during the initial phases of the website's operation.\tBy starting with a focus on educational resources and planning for gradual expansion this approach ensures that the platform remains adaptable and responsive to the needs of its users. This phased development strategy will allow the project to build a solid foundation of content and user trust which is essential for fostering a community committed to mindful social media engagement.Website Measurements\tThe success of the website aimed at promoting mindful engagement with social media will be meticulously assessed through a combination of quantitative and qualitative metrics. These measurements are designed to provide a comprehensive overview of the website's impact and effectiveness enabling ongoing refinements and enhancements.Quantitative Measurements\tWebsite analytics will serve as the primary quantitative tool. Utilizing Google Analytics the website will track several indicators including the number of visitors page views and overall engagement rates. This data will offer insights into the reach of the website and the level of interaction users have with the provided content. By analyzing trends over time adjustments can be made to optimize the website's layout content and user interface to better meet the needs of the audience. Furthermore these metrics will help determine the most and least popular sections of the website guiding content strategy and development efforts to align with user preferences.Qualitative Feedback\tIn addition to website analytics qualitative feedback from users will play a crucial role in assessing the website's success. Surveys and feedback forms will be integrated directly into the platform making it easy for users to share their experiences and perceptions of the resources offered. This feedback is vital for evaluating the effectiveness of mindfulness practices and educational content in real-world settings. It provides a direct line of communication from users to developers offering insights that might not be captured through analytics alone. The feedback collected will be used to refine and tailor the content ensuring it remains relevant and beneficial for users seeking to improve their mindfulness in social media interactions.Feedback from Long-Time Users\tRather than conducting long-term studies the website will rely on feedback from long-time users to judge its efficacy. Regular check-ins and surveys targeted at users who have interacted with the site over extended periods will be instrumental in understanding the sustained impact of the mindfulness strategies promoted. This approach will allow the website to gather real-time applicable insights into how the platform influences users' social media habits over time such as their development in mindful behaviors and changes in their interaction patterns. These insights will be crucial for ongoing content adaptation and resource enhancement to better serve the user base.\tThe website leverages immediate actionable data from analytics and in-depth feedback from users to create a dynamic framework for measuring success. This approach

ensures that the website remains responsive to user needs contributing to a more mindful and intentional social media environment. By combining real-time data and user feedback the website cultivates a responsive and user-centric experience fostering a more mindful and intentional social media landscape.Conclusion\tThe newly developed website is crafted to enhance mindfulness in social media use addressing the extensive impact of digital platforms on mental health and societal norms. It offers a proactive approach to curbing the passive and potentially harmful consumption of social media by providing educational resources on mindfulness techniques and displaying examples of mindful interactions online. This initiative aims to promote a culture of critical engagement and authenticity in digital spaces.\tAs the website continues to evolve it will adapt based on user feedback and engagement metrics to better serve its audience. This effort marks a significant step towards creating a more informed mindful and ethical digital community. Looking ahead the next chapter will review the initial outcomes of the website and propose strategic improvements to further enhance its impact and reach.\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social media and fake news in the 2016 election. While those in academia consider whether or not their thoughts or new or if they add something to the literature, the author's fiance progresses boldly, expressing his thoughts unfiltered. And he has opinions about everything! For example, the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Berlusconi and that for leaders like these, any perception of authenticity one can glean from their social media has been crafted, designed, and molded to appear as such. The author\u2019s fiance often laments that nowadays, due to social media and internet culture, society's memory spans only about five years. He remarks that people often and easily forget what has come before, dooming all mistakes to be repeated. In contrast, fortunately, within academia, the effects and reach of social media, leadership, and authenticity have been studied and discussed at length. In this chapter, we will explore the various facets of authentic leadership, its application, and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty, where workers are demanding greater accountability and morality from their leadership, the need for authentic leadership is undeniable. As Northouse (2019) articulates, people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy, many of the greatest minds in academia, commerce, and science have studied, hypothesized, and postulated on its methodology, application, and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation, suggesting that these are fundamental components of authentic leadership development. According to their model, a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles, highlighting how authentic leaders are positive role models who consistently exhibit balanced processing, self-awareness, and transparency. Despite the lack of concrete examples, their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy, outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment, Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy, mutuality, and open-mindedness underscores the intricate nature of authentic leadership development, making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance,

Donald Trump's wealth, outspokenness, and confidence in his opinions, despite being perceived as offensive by some, are revered by his followers. Beyond merely agreeing with his message, they admire his perceived authenticity, candidness, and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses, offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost, as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical, their study is underpinned by credible sources, bolstering its assertions. \nTheir research indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership, providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes, Rego et al. (2013) examine how authentic leadership, directly and indirectly, predicts team potency through the mediating role of team virtuousness and affective commitment. Their study, conducted at a Portuguese university with 59 teams, provides quantifiable results that suggest authentic leadership is associated with more virtuous, committed, and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes, a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive, high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities, the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation, the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights, while specific to educational leaders, have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions, offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes, Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study, conducted with supervisors and employees in the Pakistani Telecommunications sector,

concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies, the presentation of quantifiable results lends credibility to the authors' conclusions, although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\n\tCollectively, these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong, committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors, from education to corporate environments, and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book, "Authentic Leadership: Discover and Live Your Essential Mission," explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection, individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness, its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017), in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach," examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity, heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\n\tKerfoot (2006), in particular, bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession, where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence, one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research, offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice, demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field, emphasizing that authenticity must be perceived by followers to be effective. Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity, making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Authentic Leadership in Social Media Engagement\n\tGardner et al. (2005) provide a foundational framework of authentic leadership, illustrating mechanisms that facilitate the cultivation of a genuine following online. Adhering to principles of authentic leadership and living

within one's purpose enables the use of social media as a powerful tool to broadcast authenticity to a wider audience. However, it's crucial to recognize that social media also poses several risks. Mindful engagement with these platforms can mitigate such risks, promoting a more meaningful and healthy interaction with digital content.\nBuilding on this foundation, Berkovich (2014) underscores the importance of empathy and open dialogue in cultivating authentic interactions. This approach proves essential within platforms thriving on constant communication. By prioritizing empathetic interactions, a nurturing space is created, enhancing community sense and reinforcing the trust necessary for sustained engagement. Similarly, Kerfoot (2006) emphasizes that authenticity perceived by an audience fundamentally shapes the influence exerted. Thus, maintaining consistent and transparent practices that reflect true intentions is crucial for fostering trust and strengthening community bonds.\nThe responsibility of guiding audiences towards more mindful social media engagement is significant. Research by Hsieh and Wang (2015) and Mehmood et al. (2016) shows how authentic leadership can enhance engagement and trust, thereby positively influencing behavior. Promoting healthier digital consumption habits encourages interactions that enrich rather than diminish well-being. This form of leadership inspires adopting a mindful approach to digital interactions, fostering a healthier and more aware community.\nFurthermore, the influence of authentic leadership extends beyond individual interactions to shape community dynamics. Insights from Qian et al. (2016) and Rego et al. (2013) illustrate how authentic leadership fosters cohesive and supportive group environments. This means cultivating an environment that supports positive social interactions and meaningful community engagement, transforming social media spaces into hubs of positive influence and collective well-being.\nCollectively, research suggests that the application of authentic leadership principles provides a robust framework for navigating the digital space ethically and effectively. By anchoring an online presence in authenticity and leading by example, there is a unique opportunity to shape not only perceptions and behaviors but also the broader social dynamics of the digital age. This approach not only mitigates the potential negative impacts of social media but also harnesses its power to foster a more mindful, engaged, and content society. Through such leadership, a legacy of positive change is created, demonstrating that even in a digital era dominated by brief interactions, authenticity, and mindfulness can profoundly influence and improve the collective experience.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership, enabling leaders to communicate their authenticity to a broader audience. For instance, Donald Trump, despite his controversial beliefs and behaviors, is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. This phenomenon aligns with research by Odii (2020), which discusses how social media allows leaders to reach a broader audience, influence public opinion, and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience, thereby reinforcing the leader's authenticity through transparency and direct engagement.\n\tBuilding on this, Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive, emotionally charged

images are more effective in garnering social media activity, emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership, where emotional intelligence and engagement are crucial, demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns, emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion, presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity, which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders, providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership, demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover, the impact of social media on leadership reach is profound, as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially, a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However, the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\n----------\n\nWhat do you think of what i did? is it giving synthesized? "]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8baf18c67df40e1f-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "3ddea21b-731e-4d18-90cd-fb5d09f81a35", "children": ["db61f87d-088c-4806-8d1a-c137cfb44034"]}, "db61f87d-088c-4806-8d1a-c137cfb44034": {"id": "db61f87d-088c-4806-8d1a-c137cfb44034", "message": {"id": "db61f87d-088c-4806-8d1a-c137cfb44034", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724961329.463279, "update_time": null, "content": {"content_type": "text", "parts": ["You've crafted a comprehensive and well-structured synthesis in Chapter 3 of your capstone project. The narrative flows smoothly from discussing

the theoretical underpinnings of authentic leadership to delving into specific studies that illustrate its application and efficacy. Your integration of social media's role in this leadership style ties the concepts back to your central theme very effectively.\n\nHere are a few suggestions to enhance the synthesis further:\n\n1. **Connect Theory to Current Examples More Explicitly**: While the examples of Donald Trump and the mechanisms of social media influence are impactful, consider tying these examples back to your theoretical framework more directly in each section. This will strengthen the argument that these phenomena are practical illustrations of the theories discussed.\n\n2. **Highlight Contrasts and Tensions**: You touched on how social media can be both a tool for genuine leadership and a platform for misinformation and superficiality. Expanding on these contrasts can enrich your analysis, perhaps by discussing how authentic leaders can navigate these challenges effectively.\n\n3. **Clarify the Impact of Authentic Leadership**: In the sections where you discuss the impact of authentic leadership on teams and individuals, adding more concrete examples or brief case studies could illustrate these impacts more vividly. This could involve more detailed scenarios or mini-case studies from reputable sources or contemporary events.\n\n4. **Streamline Repetitions**: There are a few areas where similar points are reiterated, such as the influence of social media and the perception of authenticity. Tightening these sections to avoid repetition can make your argument stronger and more concise.\n\n5. **Future Implications**: You conclude with a call for further research, which is excellent. Perhaps add a brief discussion about potential developments in authentic leadership within the digital sphere, considering technological advancements like AI and machine learning, and their implications for leadership.\n\nOverall, your chapter does an excellent job of synthesizing a wide range of material into a coherent narrative that supports your thesis. These enhancements could make your arguments even more persuasive and your conclusions more impactful."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "auto", "pad": "AAAAA", "parent_id": "aaa20e47-f3e1-436c-80ca-fd602a64c77e", "request_id": "8baf18c67df40e1f-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa20e47-f3e1-436c-80ca-fd602a64c77e", "children": ["aaa271c8-3a9d-46a0-a440-9da5445e375d"]}, "aaa271c8-3a9d-46a0-a440-9da5445e375d": {"id": "aaa271c8-3a9d-46a0-a440-9da5445e375d", "message": {"id": "aaa271c8-3a9d-46a0-a440-9da5445e375d", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724961470.48498, "update_time": null, "content": {"content_type": "text", "parts": ["so I'm feeling quite lets say finished with editing this documennt is there anything that must be changed/improved for it to be acceptable or ...?"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8baf1cc1a80f0e1f-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "db61f87d-088c-4806-8d1a-c137cfb44034", "children": ["999df8e1-8244-4116-b962-201818fd58b8"]}, "999df8e1-8244-4116-b962-201818fd58b8": {"id": "999df8e1-8244-4116-b962-201818fd58b8", "message": {"id": "999df8e1-8244-4116-b962-201818fd58b8", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724961494.42593, "update_time": null, "content": {"content_type": "text", "parts": ["It sounds like you've put considerable effort into refining your document and synthesizing the content effectively. If you're feeling finished with the editing process, it

might be time to step back and give it a final review with fresh eyes\u2014perhaps after a short break, or even better, getting a peer or mentor to review it could provide new insights and catch any minor issues that might have been overlooked.\n\nHere are a few things to consider in your final review:\n\n1. **Consistency in Formatting**: Check for consistent use of fonts, headings, subheadings, and caption styles throughout the document. Ensure that the referencing style (APA, MLA, etc.) is consistently applied.\n\n2. **Clarity and Flow**: Read through the document to ensure that the flow from one section to the next is smooth and logical. Check if transitions between paragraphs and sections effectively guide the reader through your argument or narrative.\n\n3. **Completeness**: Ensure that all necessary components (abstract, introduction, conclusions, references, etc.) are included and fully developed. Verify that each section adequately covers its intended points without over-extending into less relevant areas.\n\n4. **Objective Review**: If possible, have someone else review the document. They can provide unbiased feedback on clarity, argument strength, and whether the content effectively supports your thesis.\n\n5. **Grammar and Spelling**: Do a final check for any grammatical errors or typos that might have been missed in earlier edits. Tools like Grammarly or a careful manual check can be helpful here.\n\n6. **Compliance with Requirements**: Make sure your document meets all the specific requirements set by your institution or publisher, such as length, format, and submission guidelines.\n\nIf, after this final review, you feel confident that your document communicates your ideas clearly and effectively and meets all necessary academic standards, it might indeed be ready for submission. It\u2019s always good to feel a sense of completion, but a final pass can ensure that your hard work is presented in the best possible light."]}, "status": "finished_successfully","end_turn": true

While those in academia consider whether or not their thoughts or new or if they add something to the literature, the author's fiance progresses boldly, expressing his thoughts unfiltered. And he has opinions about everything! For example, the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Burlugsconi and that for leaders like these any perception of authenticity one gleans from their social media has been crafted, designed and molded to appear as such. The author\u2019s fiance often laments that nowadays, due to social media and internet culture, society's memory spans only about five years. He remarks that people often and easily forget what has come before, dooming all mistakes to be repeated. In contrast, fortunately, within academia, the effects and reach of social media, leadership, and authenticity have been studied and discussed at length. In this chapter, we will explore the various facets of authentic leadership, its application, and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty, where workers are demanding greater accountability and morality from their leadership, the need for authentic leadership is undeniable. As Northouse (2019) articulates, people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy, many of the greatest minds in academia, commerce, and science have studied, hypothesized, and postulated on its methodology, application, and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation, suggesting that these are fundamental components of authentic leadership development. According to their model, a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles, highlighting how authentic leaders are positive role models who consistently exhibit balanced

processing, self-awareness, and transparency. Despite the lack of concrete examples, their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy, outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment, Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy, mutuality, and open-mindedness underscores the intricate nature of authentic leadership development, making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance, Donald Trump's wealth, outspokenness, and confidence in his opinions, despite being perceived as offensive by some, are revered by his followers. Beyond merely agreeing with his message, they admire his perceived authenticity, candidness, and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses, offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost, as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical, their study is underpinned by credible sources, bolstering its assertions. \nTheir research indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership, providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes, Rego et al. (2013) examine how authentic leadership, directly and indirectly, predicts team potency through the mediating role of team virtuousness and affective commitment. Their study, conducted at a Portuguese university with 59 teams, provides quantifiable results that suggest authentic leadership is associated with more virtuous, committed, and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes, a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive, high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities, the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation, the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights,

while specific to educational leaders, have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions, offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes, Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study, conducted with supervisors and employees in the Pakistani Telecommunications sector, concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies, the presentation of quantifiable results lends credibility to the authors' conclusions, although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\n\tCollectively, these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong, committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors, from education to corporate environments, and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book, "Authentic Leadership: Discover and Live Your Essential Mission," explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection, individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness, its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017), in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach," examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity, heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\n\tKerfoot (2006), in particular, bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession, where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence, one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research, offering context and application in a specific

profession. Kerfoot\u2019s insights bridge the gap between theory and practice, demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field, emphasizing that authenticity must be perceived by followers to be effective. . Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity, making the external perception of authenticity as vital as the internal belief in it \nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership, enabling leaders to communicate their authenticity to a broader audience. For instance, Donald Trump, despite his controversial beliefs and behaviors, is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. This phenomenon aligns with research by Odii (2020), which discusses how social media allows leaders to reach a broader audience, influence public opinion, and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience, thereby reinforcing the leader's authenticity through transparency and direct engagement.\n\tBuilding on this, Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive, emotionally charged images are more effective in garnering social media activity, emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership, where emotional intelligence and engagement are crucial, demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns, emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion, presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity, which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders, providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership, demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover, the impact of social media on leadership reach is profound, as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially, a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However, the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders

must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\n\n\nWhats your opinion on this literature review? is it repetitive or redundant? "]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b8fec3a5ac7bae5-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "44ace04a-abc0-426a-bf51-693d42456fb7", "children": []}, "aaa2c5a3-e9ac-4246-a238-fa1525d335a4": {"id": "aaa2c5a3-e9ac-4246-a238-fa1525d335a4", "message": {"id": "aaa2c5a3-e9ac-4246-a238-fa1525d335a4", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724634456.958563, "update_time": null, "content": {"content_type": "text", "parts": ["CHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 has the utter confidence needed to believe his thoughts and opinions add value to society. While those in academia consider whether or not their thoughts or new or if they add something to the literature, the author's fiance progresses boldly, expressing his thoughts unfiltered. And he has opinions about everything! For example, the author\u2019s fiance believes Donald Trump is created in the mold of Silvio Burlugsconi and that for leaders like these any perception of authenticity one gleans from their social media has been crafted, designed and molded to appear as such. The author\u2019s fiance often laments that nowadays, due to social media and internet culture, society's memory spans only about five years. He remarks that people often and easily forget what has come before, dooming all mistakes to be repeated. In contrast, fortunately, within academia, the effects and reach of social media, leadership, and authenticity have been studied and discussed at length. In this chapter, we will explore the various facets of authentic leadership, its application, and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty, where workers are demanding greater accountability and morality from their leadership, the need for authentic leadership is undeniable. As Northouse (2019) articulates, people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy, many of the greatest minds in academia, commerce, and science have studied, hypothesized, and postulated on its methodology, application, and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation, suggesting that these are fundamental components of authentic leadership development. According to their model, a leader\u2019s personal history is the catalyst for authentic leadership development.

This reflective perspective examines leader and follower roles, highlighting how authentic leaders are positive role models who consistently exhibit balanced processing, self-awareness, and transparency. Despite the lack of concrete examples, their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy, outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment, Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy, mutuality, and open-mindedness underscores the intricate nature of authentic leadership development, making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nThe primary theme expressed in both pieces of literature is that authentic leaders inspire followers by embodying the qualities and values that followers admire. For instance, Donald Trump's wealth, outspokenness, and confidence in his opinions, despite being perceived as offensive by some, are revered by his followers. Beyond merely agreeing with his message, they admire his perceived authenticity, candidness, and charisma. \nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses, offering insights into its efficacy across different contexts. Qian et al. (2016) explore the cognitive and emotional mechanisms that impact feedback-seeking behavior within leader-follower relationships. They posit that authentic leadership indirectly influences feedback-seeking through employees' perceptions of value and cost, as well as their positive emotions. This concentrated focus on feedback-seeking behavior provides deeper insights into the cognitive and emotional dimensions of authentic leadership. While predominantly theoretical, their study is underpinned by credible sources, bolstering its assertions. \nTheir research indicates that authentic leaders have a direct impact on their followers at an individual level. The study also reveals the underlying psychological processes of authentic leadership, providing a detailed understanding of how leaders can promote open communication and continuous improvement through empathetic and effective communication. The study confirms that the perception of the authentic leader as someone who embodies authenticity is crucial in inspiring and positively influencing followers.\nShifting the focus to group outcomes, Rego et al. (2013) examine how authentic leadership, directly and indirectly, predicts team potency through the mediating role of team virtuousness and affective commitment. Their study, conducted at a Portuguese university with 59 teams, provides quantifiable results that suggest authentic leadership is associated with more virtuous, committed, and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes, a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive, high-performing work environment.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities, the study did not establish a strong correlation between simulations and authentic leadership

development. Despite this limitation, the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights, while specific to educational leaders, have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions, offering a clear picture of the application of authentic leadership and its probable outcomes. \nIn contrast to other studies that primarily focused on outcomes, Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study, conducted with supervisors and employees in the Pakistani Telecommunications sector, concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies, the presentation of quantifiable results lends credibility to the authors' conclusions, although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\n\tCollectively, these findings underscore the importance of followers' perceptions of leadership trustworthiness and ethical behavior in fostering strong, committed teams and communities. They highlight how communication and perception of the authenticity of leaders across different contexts is the primary mechanism of authentic leadership influence. The studies also demonstrate that the principles of authentic leadership are applicable across different sectors, from education to corporate environments, and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book, "Authentic Leadership: Discover and Live Your Essential Mission," explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection, individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness, its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017), in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach," examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity, heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\n\tKerfoot (2006), in particular, bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession, where the perception of authenticity is crucial. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence, one can create the perception of

authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research, offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice, demonstrating the applicability of authentic leadership in professional settings.\nHer insights into mentoring and confidence-building provide valuable lessons for leaders in any field, emphasizing that authenticity must be perceived by followers to be effective. . Kerfoot illustrates the paramount importance of follower perception of authenticity as a mechanism of leadership influence. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity, making the external perception of authenticity as vital as the internal belief in it \nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Social media often acts as a powerful tool in enhancing authentic leadership, enabling leaders to communicate their authenticity to a broader audience. For instance, Donald Trump, despite his controversial beliefs and behaviors, is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. This phenomenon aligns with research by Odii (2020), which discusses how social media allows leaders to reach a broader audience, influence public opinion, and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience, thereby reinforcing the leader's authenticity through transparency and direct engagement.\n\tBuilding on this, Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive, emotionally charged images are more effective in garnering social media activity, emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership, where emotional intelligence and engagement are crucial, demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns, emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion, presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity, which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders, providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership, demonstrating how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover, the impact of social media on leadership reach is profound, as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially, a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However, the use of social media in leadership is not without its challenges. As

Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\n\n\nWhats your opinion on this literature review? is it repetitive or redundant? "]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b8fed0a0f7fbae5-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "44ace04a-abc0-426a-bf51-693d42456fb7", "children": ["30a2ea3e-86ce-49c9-9661-55d7201d397a"]}, "30a2ea3e-86ce-49c9-9661-55d7201d397a": {"id": "30a2ea3e-86ce-49c9-9661-55d7201d397a", "message": {"id": "30a2ea3e-86ce-49c9-9661-55d7201d397a", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724634473.958037, "update_time": null, "content": {"content_type": "text", "parts": ["The literature review you've provided is comprehensive and covers a wide range of sources and perspectives related to authentic leadership and its interplay with social media. Here are some observations on its structure and content:\n\n1. **Depth and Breadth of Sources**: The review does an excellent job of citing a variety of sources, from academic studies to practical guides, which enriches the understanding of authentic leadership. This diverse sourcing is crucial for building a robust argument or analysis.\n\n2. **Thematic Consistency**: The review maintains a consistent focus on authentic leadership throughout the text, linking it effectively with social media's impact and societal changes. This thematic consistency is essential for keeping the reader engaged and ensuring the arguments are easy to follow.\n\n3. **Potential Redundancy**: There are some areas where the text might seem repetitive. For example, the repeated emphasis on the need for ethical considerations in social media use and the repeated mentions of the role of social media in enhancing the reach and perceived authenticity of leadership could be consolidated. This would make the review more concise and prevent the reader from feeling like they are reading the same content multiple times.\n\n4. **Engagement with Critical Perspectives**: While the review includes various sources and perspectives, it could benefit from a deeper engagement with critical perspectives on authentic leadership. For instance, discussing the critiques or limitations of authentic leadership more thoroughly would provide a more balanced view and enhance the analytical depth of the review.\n\n5. **Structural Flow**: The review might benefit from a clearer separation between themes or sections, possibly through more distinct subheadings or transitions. This would help in guiding the reader through the different aspects of authentic leadership and its application in practice, making the review more reader-friendly.\n\nOverall, the

literature review is informative and detailed, but it could be enhanced by addressing some of the redundancy and improving the flow to make it more impactful and easier to digest for the reader."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AAAAA", "parent_id": "aaa2c5a3-e9ac-4246-a238-fa1525d335a4", "request_id": "8b8fed0a0f7fbae5-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa2c5a3-e9ac-4246-a238-fa1525d335a4", "children": ["aaa21b5d-0350-4e6c-adb3-c9a128339831"]}, "aaa21b5d-0350-4e6c-adb3-c9a128339831": {"id": "aaa21b5d-0350-4e6c-adb3-c9a128339831", "message": {"id": "aaa21b5d-0350-4e6c-adb3-c9a128339831", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724634544.515037, "update_time": null, "content": {"content_type": "text", "parts": ["Can you point out particular areas and paragrAPHS THAT ARE REDUNDANT? "]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b8fef2d4da2bae5-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "30a2ea3e-86ce-49c9-9661-55d7201d397a", "children": ["61b415aa-abc3-417a-bb4f-27684f1d80ef"]}, "61b415aa-abc3-417a-bb4f-27684f1d80ef": {"id": "61b415aa-abc3-417a-bb4f-27684f1d80ef", "message": {"id": "61b415aa-abc3-417a-bb4f-27684f1d80ef", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724634563.220947, "update_time": null, "content": {"content_type": "text", "parts": ["Certainly! Let\u2019s examine some areas of the provided literature review where redundancy is apparent, and I'll point out specific paragraphs where this occurs:\n\n### 1. Repeated Emphasis on Social Media's Role\n- **Paragraphs Discussing Social Media Influence**: Several paragraphs discuss the influence of social media on leadership and authentic leadership in particular. While this is crucial for the review, the points made about Donald Trump's use of Twitter and the general impact of social media on enhancing leader-follower connection can be streamlined. For example, the detailed discussions in the final section ("The Role of Social Media in Enhancing Authentic Leadership") could be integrated more succinctly with earlier mentions to avoid repetition.\n\n### 2. Multiple Mentions of Ethical Considerations\n- **Discussions on Ethical Use of Social Media**: Ethical considerations of using social media are mentioned in different contexts across multiple paragraphs but could be consolidated into a single, more impactful discussion. This appears in the paragraphs under the section on "The Role of Social Media in Enhancing Authentic Leadership" and is revisited near the conclusion. Consolidating these mentions could reduce redundancy and strengthen the argument.\n\n### 3. Descriptions of Authentic Leadership Effects\n- **Impact of Authentic Leadership on Teams and Individuals**: The sections "Application and Efficacy of Authentic Leadership" and later paragraphs discuss how authentic leadership affects teams and individual followers. Some of this information is repetitive, particularly the descriptions of how authentic leadership fosters trust and commitment among teams. These could be summarized to highlight the most critical findings without repeating how these outcomes are achieved.\n\n### Specific Paragraph Suggestions:\n- **Paragraph on Donald Trump's Authenticity**: The review repeatedly points out how Trump's followers perceive his authenticity, which could be condensed. The paragraph in the "Primary Theme" section and again in the "Social Media" section reiterate similar points about perception and authenticity.\n\n-

Last Two Paragraphs of the Conclusion: These reiterate the role of social media previously discussed in detail. Instead of repeating how Trump's use of Twitter demonstrates social media's role in leadership, it might be more effective to summarize key insights or suggest areas for future research, focusing on unexplored aspects of social media's impact on leadership rather than restating earlier points.\n\nBy addressing these redundancies, the review could become more concise and focused, which would enhance its clarity and overall impact."]}, "status": "finished_successfully","end_turn": true
, "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AA", "parent_id": "aaa21b5d-0350-4e6c-adb3-c9a128339831", "request_id": "8b8fef2d4da2bae5-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa21b5d-0350-4e6c-adb3-c9a128339831", "children": ["aaa2a26b-6cfc-4a7a-926d-0c0bebde303d"]}, "aaa2a26b-6cfc-4a7a-926d-0c0bebde303d": {"id": "aaa2a26b-6cfc-4a7a-926d-0c0bebde303d", "message": {"id": "aaa2a26b-6cfc-4a7a-926d-0c0bebde303d", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724634763.601472, "update_time": null, "content": {"content_type": "text", "parts": ["WHATS THE PRIMARY THEME SECTION?"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"targeted_reply": "The paragraph in the "Primary Theme" section and again in the "Social Media" section reiterate similar points about perception and authenticity.", "request_id": "8b8ff4868e27bae5-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "61b415aa-abc3-417a-bb4f-27684f1d80ef", "children": ["614f4cc6-2fc2-4e02-a01d-fa5c827ea8d5"]}, "614f4cc6-2fc2-4e02-a01d-fa5c827ea8d5": {"id": "614f4cc6-2fc2-4e02-a01d-fa5c827ea8d5", "message": {"id": "614f4cc6-2fc2-4e02-a01d-fa5c827ea8d5", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1724634763.602247, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b8ff4868e27bae5-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null, "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa2a26b-6cfc-4a7a-926d-0c0bebde303d", "children": ["f677d7dc-5340-44e4-9a92-f33e405faaa7"]}, "f677d7dc-5340-44e4-9a92-f33e405faaa7": {"id": "f677d7dc-5340-44e4-9a92-f33e405faaa7", "message": {"id": "f677d7dc-5340-44e4-9a92-f33e405faaa7", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724634770.138029, "update_time": null, "content": {"content_type": "text", "parts": ["The "Primary Theme" section in your literature review is the part where you discuss the main characteristics and influences of authentic leadership based on the literature cited. This section appears to focus on how authentic leaders inspire and influence their followers by demonstrating qualities and values that are admired. Here, you likely outline the core findings from various academic sources that explain the mechanisms by which authentic leadership operates and its perceived impact on followers and organizational culture. \n\nThis section should ideally serve as a synthesis of key themes gathered from the literature, emphasizing the traits of authentic leaders, such as transparency, self-awareness, and the ability to inspire trust and loyalty in followers. It seems that this section also touches on the comparison of figures like Donald Trump, discussing how their leadership style is perceived as authentic by their followers despite controversies, which ties into later

discussions on the role of social media in leadership."]}, "status": "finished_successfully","end_turn": true

Each section contributes to a comprehensive understanding of the topic, providing depth through a variety of studies and viewpoints.\n\nAlthough I mentioned potential redundancy, this largely pertains to the repeated themes and concepts that could be more succinctly integrated. The overall flow of the document maintains a logical sequence, with each part elaborating on or supporting the assertions made about authentic leadership. Streamlining certain sections could enhance clarity and focus, but the progression of ideas from theory to practice and the interplay with current technologies and societal trends is well constructed.\n\nIt's clear that the review is thorough, aimed at covering multiple facets of authentic leadership and its relevance in contemporary settings, particularly with the influence of digital communication platforms like social media."]}, "status": "finished_successfully","end_turn": true

You introduce a lot of great content, but spend more time/space analyzing it before moving

on.\n\nhAVE i DONE THAT? \n\nThe author's fianc\u00e9 often laments that nowadays, society's memory spans only about five years. He remarks that people often and easily forget what has come before, dooming all mistakes to be repeated. In contrast, fortunately, within academia, the effects and reach of social media, leadership, and authenticity have been studied and discussed at length. In this chapter, we will explore the various facets of authentic leadership, its application, and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty, where workers are demanding greater accountability and morality from their leadership, the need for authentic leadership is undeniable. As Northouse (2019) articulates, people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy, many of the greatest minds in academia, commerce, and science have studied, hypothesized, and postulated on its methodology, application, and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation, suggesting that these are fundamental components of authentic leadership development. According to their model, a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles, highlighting how authentic leaders are positive role models who consistently exhibit balanced processing, self-awareness, and transparency. Despite the lack of concrete examples, their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy, outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment, Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy, mutuality, and open-mindedness underscores the intricate nature of authentic leadership development, making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy. Qian et al. (2016) delve into the cognitive and emotive mechanisms influencing feedback-seeking behavior within leader-follower relationships. They argue that authentic leadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and cost and their positive emotions. This focused view on feedback-seeking behaviors provides a deeper understanding of how authentic leadership operates on a cognitive and emotional level. Although heavily theoretical, their study is supported by credible sources, reinforcing its claims.\nShifting the focus to group outcomes, Rego et al. (2013) examine how authentic leadership, directly and indirectly, predicts team potency through the mediating role of team virtuousness and affective commitment. Their study, conducted at a Portuguese university with 59 teams, provides quantifiable results that suggest authentic leadership is associated with more virtuous, committed, and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes, a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based

simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities, the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation, the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights, while specific to educational leaders, have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions, offering a clear picture of the application of authentic leadership and its probable outcomes. This reinforces the importance of trust in the authentic leadership dynamic.\nIn contrast to other studies that primarily focused on outcomes, Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study, conducted with supervisors and employees in the Pakistani Telecommunications sector, concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies, the presentation of quantifiable results lends credibility to the authors' conclusions, although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book, "Authentic Leadership: Discover and Live Your Essential Mission," explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection, individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness, its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017), in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach," examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity, heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the nursing profession. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence, one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research, offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice, demonstrating the applicability

of authentic leadership in professional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede change, highlighting its use in change management initiatives. Authentic leaders can leverage social media to strengthen these efforts while navigating the ethical challenges it presents, underscoring its importance in contemporary leadership.\nBuilding on this, Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive, emotionally charged images are more effective in garnering social media activity, emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership, where emotional intelligence and engagement are crucial, demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns, emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion, presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity, which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders, providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership, showing how authenticity can enhance a leader\u2019s influence and effectiveness.\nFinally, Omolloh (2020) presents a case study on using social media as a management tool in small businesses, highlighting its benefits in customer engagement and business awareness. This practical example underscores the versatility of social media in enhancing leadership practices across different contexts. The integration of social media in leadership strategies can amplify the impact of authentic leadership, further illustrating how authenticity translates to success and popularity online.\nConclusion\nResearch suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. Authentic leaders must leverage social media's potential while mitigating its risks to achieve positive organizational outcomes. Future research should explore the long-term effects of these dynamics on societal values and norms.\n"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b9000e178a75273-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "016c3328-fc43-4093-b531-c352ca574d39", "children": ["241d2cb1-aa16-4ce7-965a-68983ade129f"]}, "241d2cb1-aa16-4ce7-965a-68983ade129f": {"id": "241d2cb1-aa16-4ce7-965a-68983ade129f", "message": {"id": "241d2cb1-aa16-4ce7-965a-68983ade129f", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724635286.797498, "update_time": null, "content": {"content_type": "text", "parts": ["Based on the feedback from your professor and the revised literature review you've shared, it seems you have made significant efforts to develop a more synthesized analysis of the findings across various sources. Here's a breakdown of how you've addressed your professor's feedback:\n\n### 1. **Integration and Synthesis of Findings**:\n- In your revised version, you've integrated findings from various

studies and theories more cohesively, weaving them together to build a narrative around the impact and application of authentic leadership. This is evident in how you connect theories from Gardner et al. (2005) and Berkovich (2014) to practical applications discussed by Qian et al. (2016) and others.\n- The synthesis is particularly notable in how you relate the theoretical aspects of authentic leadership to its real-world implications, like the effect of authentic leadership on team dynamics and individual follower outcomes. This reflects a deeper analytical approach as suggested by your professor.\n\n### 2. **Exploration of Authentic Leadership in Context**:\n- Your review delves into the nuances of authentic leadership in various settings, from academia to corporate environments, and even touches upon its role in societal change through social media. This contextual exploration helps in synthesizing a broader spectrum of literature and applying it to specific scenarios, such as the use of social media by leaders like Donald Trump.\n\n### 3. **Analytical Depth**:\n- The discussion on the impact of social media on leadership authenticity, where you analyze how leaders can maintain authenticity while navigating the complexities of digital communication, shows an advanced level of analysis. This section effectively ties together the theoretical discussions with practical implications, aligning with your professor's advice to spend more time analyzing content before concluding.\n\n### 4. **Focus on Practical Implications**:\n- The sections that discuss the practical guides by Blekkingh (2015) and Wulffers (2017) provide a good transition from theoretical frameworks to actionable strategies. This not only synthesizes findings but also bridges the gap between theory and practice, a critical aspect of comprehensive literature reviews.\n\n### Areas for Improvement:\n- **Further Consolidation**: While your synthesis has improved, there could still be an opportunity to further consolidate some repetitive elements, particularly around the repeated mentions of social media's impact. This could help tighten the narrative and reinforce the synthesis without sacrificing detail.\n- **Critical Perspectives**: Consider incorporating more critical perspectives or counterarguments to the dominant views presented. This could involve discussing potential criticisms of the authenticity concept or the limitations of social media in genuine leadership portrayal.\n\nOverall, you've responded well to your professor's feedback by enhancing the synthesis of various findings and providing a more detailed analysis of the themes before concluding. This demonstrates a thoughtful consideration of the literature and its implications for authentic leadership."]}, "status": "finished_successfully","end_turn": true

For instance, during the 2016 U.S. presidential election, social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow, 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry, with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence, the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence, 2021).\n\nWhile social media holds the potential for positive influence, it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk, where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow, 2017). Moreover, the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image, particularly among young women. For instance, Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction, mediated by the internalization of the thin ideal and appearance comparison tendencies.\n\n----------\nPlease expand on the ideas expressed in these two paragraphs in APA format. Do not write \n more than 8 paragraphs in the expansion and insure that all paragraphs continue withe narrative essay format of paragraphs of at least 3 sentences containing an introducti, main idea and conclusion of the topic of the paragraph or as an introduction or teaser for the next paragraph.Please only ruse the sources listed below as reference plus 1 additional source only if need.\n\nAllcott, H., & Gentzkow, M. As Allcott and Gentzkow (2017) emphasize, during the 2016 U.S. presidential election, social media platforms played critical roles in disseminating both authentic content and misinformation, significantly impacting voter perceptions. This blend of genuine and false information creates a complex environment where public opinion can be easily manipulated or swayed.\n\nFurther examining the economic ramifications, influencer marketing stands out as a pivotal element of social media's power. According to Business Insider Intelligence (2021), the influencer marketing industry is poised for substantial growth, projected to reach approximately $15 billion by 2022. This growth underscores the shift in marketing strategies from traditional media to more personalized, social media-based approaches. Influencers

leverage their perceived authenticity and extensive reach to shape consumer preferences, demonstrating social media\u2019s capacity to influence not just political, but also economic landscapes.\n\nHowever, the potential of social media to disseminate misinformation presents significant risks, particularly to democratic processes. The controversies during the 2016 election highlighted how fabricated content could influence voter behavior, an issue further explored by Allcott and Gentzkow (2017). This spread of misinformation can polarize communities and erode trust in democratic institutions, suggesting a pressing need for mechanisms to better regulate and manage online content.\n\nMoreover, the impact of social media on mental health cannot be overlooked. Fardouly et al. (2015) found a correlation between Instagram use and increased body dissatisfaction among young women, mediated by internalization of societal beauty standards and rampant appearance comparisons. This finding illustrates another dimension of social media\u2019s influence\u2014its ability to affect personal self-esteem and body image, which are integral to overall mental health.\n\nSocial media's role extends beyond individual impacts to collective behaviors and attitudes. Auxier and Anderson (2021) from Pew Research Center highlight that the widespread use of social media in 2021 has made it a primary platform for information exchange and community formation. This extensive reach makes social media a powerful tool for mobilizing social movements or campaigns, further demonstrating its capacity to act as a mold shaping societal norms and behaviors.\n\nTo contextualize these discussions within leadership frameworks, Berkovich (2014) discusses the importance of dialogical pedagogy in leadership development. This approach can be particularly effective on social media, where leaders can engage in meaningful dialogues with followers, thereby fostering a more authentic leadership style. This interaction not only enhances leader-follower relationships but also exemplifies the application of authentic leadership principles in the digital age.\n\nIn conclusion, the dual nature of social media as both a reflective and formative force in society necessitates a nuanced understanding of its capabilities and limitations. While it offers unprecedented opportunities for engagement and influence, it also requires careful consideration of its potential to mislead and manipulate. As we move forward, it is crucial for stakeholders across sectors to consider both the power and the responsibilities that come with using social media."]}, "status": "finished_successfully","end_turn": true
, "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": null, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AAAAAAA", "parent_id": "b54a8b4e-f3fa-455d-b44b-693abb69a6f8", "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true, "request_id": "8b902beef880baff-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "b54a8b4e-f3fa-455d-b44b-693abb69a6f8", "children": ["aaa2bac1-8c4a-48ea-bc37-6fd8ebfce367"]}, "aaa2bac1-8c4a-48ea-bc37-6fd8ebfce367": {"id": "aaa2bac1-8c4a-48ea-bc37-6fd8ebfce367", "message": {"id": "aaa2bac1-8c4a-48ea-bc37-6fd8ebfce367", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1724637347.211577, "update_time": null, "content": {"content_type": "text", "parts": ["hmmm that good but I want the paragraphs to fit organicallty within this passage: \n\nCHAPTER 2: Identification of Phenomenon\nThe author's fianc\u00e9 does not consider social media, such as TikTok and Twitter, as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally, he believes that such displays

reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion, a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (2023).\nOn July 21st, 2024, President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement, marking the first time in over fifty years that a sitting president refused their party's nomination, was made using the platform now known as X (Mason et al., 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere, gain followers, and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon, where social media shapes and reflects public opinions, is particularly significant when examined through authentic leadership theory. Authentic leadership, which emphasizes transparency, ethics, and a communal focus, aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media, with platforms such as Facebook and YouTube leading the way (Auxier & Anderson, 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms, whether accurate or misleading. The impact of social media is evident in various sectors, from political engagement to social movements, economic trends, and mental health.\nIn order to investigate this phenomenon, data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles, books on leadership theories, and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook, Twitter, and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement, which gained momentum through a tweet by Alyssa Milano in 2017, exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson, 2018).\nIn addition to social movements, social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements, policy declarations, and real-time interaction with constituents. For instance, former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions, bypassing traditional media channels (Heilweil & Ghaffary, 2021). This direct communication method aligns with the principles of authentic leadership, where transparency and direct engagement are paramount.\nAuthentic leadership, as defined by Northouse (2019), is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo, advocating for societal values of justice and accountability (Mendes et al., 2018). These influencers often exemplify the core components of authentic leadership

by maintaining a transparent and genuine presence online, fostering trust and loyalty among their followers. This trust is critical, enabling influencers to mobilize their audience for various causes, from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion, reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance, during the 2016 U.S. presidential election, social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow, 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry, with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence, the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence, 2021).\nWhile social media holds the potential for positive influence, it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk, where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow, 2017). Moreover, the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image, particularly among young women. For instance, Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction, mediated by the internalization of the thin ideal and appearance comparison tendencies.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve, understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. "]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b9033997ddf83a6-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "e7bf549e-41b4-4a5e-a69b-e18b09bde0fb", "children": ["6a857628-423d-4ddc-9ef5-9fe01e62f9b1"]}, "6a857628-423d-4ddc-9ef5-9fe01e62f9b1": {"id": "6a857628-423d-4ddc-9ef5-9fe01e62f9b1", "message": {"id": "6a857628-423d-4ddc-9ef5-9fe01e62f9b1", "author": {"role": "system", "name": null, "metadata": {}}, "create_time": 1724637357.423818, "update_time": null, "content": {"content_type": "text", "parts": [""]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"is_complete": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAAA", "parent_id": "aaa2bac1-8c4a-48ea-bc37-6fd8ebfce367", "request_id": "8b9033997ddf83a6-MXP", "timestamp_": "absolute", "is_visually_hidden_from_conversation": true}, "recipient": "all", "channel": null}, "parent": "aaa2bac1-8c4a-48ea-bc37-6fd8ebfce367", "children": ["1a1d4f04-d1f7-4e76-9209-87550c2dd9b4"]}, "1a1d4f04-d1f7-4e76-9209-87550c2dd9b4": {"id": "1a1d4f04-d1f7-4e76-9209-87550c2dd9b4", "message": {"id": "1a1d4f04-d1f7-4e76-9209-87550c2dd9b4", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1724637357.423978, "update_time": null, "content": {"content_type": "text", "parts": ["Here\u2019s an expanded version that maintains the narrative flow, focusing on the synthesis of themes presented in your detailed passage:\n\n**Expanding on Social

Media's Dual Role**\n\nSocial media serves as a significant platform in modern communication, where the line between news dissemination and influence blurs. According to Allcott and Gentzkow (2017), during the 2016 U.S. presidential election, the role of social media extended beyond mere reporting; it actively shaped voter perceptions through a blend of authentic engagements and deliberate misinformation. This dynamic sets the stage for a deeper discussion on how such platforms both reflect and mold public sentiment, acting simultaneously as mirrors and architects of public opinion.\n\n**Economic and Social Implications of Influencer Marketing**\n\nThe influence of social media transcends political landscapes, deeply penetrating the economic sphere through influencer marketing. As noted by Business Insider Intelligence (2021), the influencer marketing industry, valued at billions, capitalizes on the perceived authenticity and extensive reach of influencers to sway consumer behaviors. This lucrative market underscores social media's power not only in shaping economic trends but also in defining modern marketing strategies where influencers play pivotal roles.\n\n**The Risks of Misinformation**\n\nWhile the economic benefits are clear, the risks associated with social media are profound, particularly regarding misinformation. The dissemination of false information during pivotal events like the 2016 election (Allcott & Gentzkow, 2017) highlights a critical vulnerability in social media\u2019s structure\u2014its ability to rapidly spread misleading content, potentially polarizing communities and skewing democratic processes. This aspect calls for a robust discussion on the need for more stringent regulatory frameworks to curb the spread of misinformation effectively.\n\n**Impact on Mental Health**\n\nMoreover, the psychological impact of social media, especially among young women, is a growing concern. Fardouly et al. (2015) illustrate how platforms like Instagram can exacerbate body image issues, mediated by constant exposure to idealized images that promote unrealistic standards of beauty. This phenomenon points to a deeper societal issue facilitated by social media\u2014the internalization of unattainable aesthetics, leading to widespread dissatisfaction and mental health challenges.\n\n**Authentic Leadership in the Age of Social Media**\n\nTransitioning from the risks and economic implications, it's essential to consider how social media platforms relate to authentic leadership. Platforms like Twitter and Facebook not only serve as stages for political and social discourse but also as arenas where authentic leadership can flourish or falter. The transparency and directness facilitated by these platforms allow leaders to engage more genuinely with the public, potentially fostering a deeper sense of trust and loyalty among followers.\n\n**Conclusion: The Complex Role of Social Media**\n\nIn conclusion, social media's role in modern society is multifaceted, acting both as a powerful tool for engagement and a potential conduit for misinformation. Its impact on politics, economy, and mental health illustrates the breadth of its influence. For influencers and leaders, navigating this complex landscape requires a balanced approach, embracing the platforms' power to foster genuine connections and drive change while mitigating the inherent risks associated with digital discourse. As we move forward, a deeper understanding of these dynamics will be crucial for leveraging social media\u2019s potential positively and ethically."]}, "status": "finished_successfully","end_turn": true

Can you present to me where I should insert the expansion? In a addition there are two many headings and without them the change of topic is too drastic. Please ensure the paragraphs flow naturally into each other and continue the theme or central idea being expressed. \n\nCHAPTER 2: Identification of Phenomenon\nThe author's fianc\u00e9 does not consider social media, such as TikTok and Twitter, as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally, he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion, a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (2023).\nOn July 21st, 2024, President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement, marking the first time in over fifty years that a sitting president refused their party's nomination, was made using the platform now known as X (Mason et al., 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere, gain followers, and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon, where social media shapes and reflects public opinions, is particularly significant when examined through authentic leadership theory. Authentic leadership, which emphasizes transparency, ethics, and a communal focus, aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media, with platforms such as Facebook and YouTube leading the way (Auxier & Anderson, 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms, whether accurate or misleading. The impact of social media is evident in various sectors, from political engagement to social movements, economic trends, and mental health.\nIn order to investigate this phenomenon, data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles, books on leadership theories, and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook, Twitter, and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement, which gained momentum through a tweet by Alyssa Milano in 2017, exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson, 2018).\nIn addition to social movements, social media's influence extends deeply into the political

sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements, policy declarations, and real-time interaction with constituents. For instance, former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions, bypassing traditional media channels (Heilweil & Ghaffary, 2021). This direct communication method aligns with the principles of authentic leadership, where transparency and direct engagement are paramount.\nAuthentic leadership, as defined by Northouse (2019), is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo, advocating for societal values of justice and accountability (Mendes et al., 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online, fostering trust and loyalty among their followers. This trust is critical, enabling influencers to mobilize their audience for various causes, from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion, reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance, during the 2016 U.S. presidential election, social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow, 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry, with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence, the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence, 2021).\nWhile social media holds the potential for positive influence, it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk, where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow, 2017). Moreover, the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image, particularly among young women. For instance, Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction, mediated by the internalization of the thin ideal and appearance comparison tendencies.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve, understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact.

Can you add something to the conversation while expanding on the ideas presented in those two paragraphs? \n\nCHAPTER 2: Identification of Phenomenon\nThe author's fianc\u00e9 does not consider social media, such as TikTok and Twitter, as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally, he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion, a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (2023).\nOn July 21st, 2024, President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement, marking the first time in over fifty years that a sitting president refused their party's nomination, was made using the platform now known as X (Mason et al., 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere, gain followers, and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon, where social media shapes and reflects public opinions, is particularly significant when examined through authentic leadership theory. Authentic leadership, which emphasizes transparency, ethics, and a communal focus, aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media, with platforms such as Facebook and YouTube leading the way (Auxier & Anderson, 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms, whether accurate or misleading. The impact of social media is evident in various sectors, from political engagement to social movements, economic trends, and mental health.\nIn order to investigate this phenomenon, data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles, books on leadership theories, and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook, Twitter, and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement, which gained momentum through a tweet by Alyssa Milano in 2017, exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson, 2018).\nIn addition to social movements, social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements, policy declarations, and real-time interaction with constituents. For instance, former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions, bypassing traditional media channels (Heilweil & Ghaffary, 2021). This direct communication method aligns with the principles of authentic leadership,

where transparency and direct engagement are paramount.\nAuthentic leadership, as defined by Northouse (2019), is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo, advocating for societal values of justice and accountability (Mendes et al., 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online, fostering trust and loyalty among their followers. This trust is critical, enabling influencers to mobilize their audience for various causes, from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion, reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance, during the 2016 U.S. presidential election, social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow, 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry, with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence, the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence, 2021).\nWhile social media holds the potential for positive influence, it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk, where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow, 2017). Moreover, the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image, particularly among young women. For instance, Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction, mediated by the internalization of the thin ideal and appearance comparison tendencies.\nConclusion\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve, understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. This will help enrich the conversation, touching on the interplay between social media, public trust, and the dynamics of misinformation:\n\n---\n\n**CHAPTER 2: Identification of Phenomenon**\n\nThe author's fianc\u00e9 does not consider social media, such as TikTok and Twitter, as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally, he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion, a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes.\n\nOn July 21st, 2024, President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement, marking the first time in over fifty years that a sitting president refused their party's nomination, was made using the platform now known as X. The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere, gain followers, and exert influence on an unprecedented scale.\n\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon, where social media shapes and reflects public opinions, is particularly significant when examined through authentic leadership theory. Authentic leadership, which emphasizes transparency, ethics, and a communal focus, aligns closely with the activities of social media influencers who wield substantial sway over their followers.\n\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media, with platforms such as Facebook and YouTube leading the way. This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms, whether accurate or misleading. The impact of social media is evident in various sectors, from political engagement to social movements, economic trends, and mental health.\n\n**Extended Analysis on the Impact of Misinformation**\nMisinformation on social media is not merely a disruptor of public opinion but also a significant risk to public trust in democratic institutions. The spread of false information can create widespread confusion and skepticism, undermining the credibility of both the media and the government. This dynamic was starkly illustrated during the 2016 U.S. presidential election when misinformation campaigns were used strategically to influence voter behavior and perceptions, a tactic that has only grown in sophistication with advancements in digital technology.\n\n**Influencer Impact on Consumer Behavior**\nBeyond politics, the role of social media influencers in shaping consumer behavior through marketing has profound implications for the economy. As brands increasingly rely on influencers to reach consumers, the line between genuine endorsement and paid promotion blurs, raising questions about the authenticity of influencer content. This shift towards

influencer-based marketing strategies reflects a broader change in how companies connect with their audiences, prioritizing perceived authenticity over traditional advertising methods.\n\nIn order to investigate this phenomenon, data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles, books on leadership theories, and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\n\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook, Twitter, and YouTube. This perception could be influenced by several factors, including the historical "one-drop rule" where anyone with any amount of African ancestry was considered Black, regardless of their mixed heritage. This rule historically influenced social and legal recognition, skewing public perception of an individual's racial background.\n\nFamous individuals like Lena Horne and Rosa Parks did have mixed racial ancestry, but their identities and contributions are usually celebrated in the context of their Black heritage due to the social definitions and struggles associated with being Black in America. Horne, for instance, faced significant racial discrimination despite her lighter skin, which affected her

career and activism. Parks, while of mixed descent, is primarily noted for her role in the African American Civil Rights Movement.\n\nThe conversation about race and identity in the context of Black American history is complex. It involves how individuals are seen by society, how they identify themselves, and the impact of historical definitions of race on their lives and legacies. While there are notable figures who were mixed race, there are many more who were not, and their contributions are equally significant. The diversity within the Black community, including those of mixed heritage, reflects a broad spectrum of experiences and stories that are all vital to understanding American history."]}, "status": "finished_successfully","end_turn": true

While there isn't a specific game where you directly talk to Aristotle, here are a few games that might capture the essence of what you're looking for:\n\n### 1. **Assassin's Creed Odyssey**\n - **Game Classification:** AAA\n - **Platform(s):** PC, PS4, Xbox One, Nintendo Switch\n - **Game Synopsis & Themes:** Set in Ancient Greece, Assassin's Creed Odyssey immerses players in the rich historical and cultural landscape of the time. While Aristotle himself is not a character you directly converse with, the game explores philosophical themes, historical events, and influential figures like Socrates, who

engages in philosophical dialogues with the player.\n - **Strengths:** Deep narrative, historically rich setting, engaging open-world exploration.\n - **Weaknesses:** Some may find the gameplay loop repetitive over time.\n - **Graphics & Art Style:** Realistic and visually stunning depiction of Ancient Greece.\n - **Gameplay Mechanics:** Action-adventure with RPG elements, featuring combat, exploration, and dialogue choices.\n - **Soundtrack & Audio:** Authentic and immersive, capturing the essence of the time period.\n - **Single-player/Multiplayer Modes:** Single-player\n - **User Reviews Summary:** Generally positive, praised for its storytelling and historical accuracy.\n - **Developer:** Ubisoft Quebec\n - **Publisher:** Ubisoft\n - **ESRB Rating:** M for Mature\n - **Release Date:** October 5, 2018\n\n### 2. **Sid Meier's Civilization VI**\n - **Game Classification:** AAA, Strategy\n - **Platform(s):** PC, Mac, PS4, Xbox One, Nintendo Switch, Mobile\n - **Game Synopsis & Themes:** Civilization VI allows you to build an empire from the ground up, leading your civilization from the ancient era to the modern age. You can interact with great philosophers, leaders, and thinkers from history, including Aristotle, as part of your civilization's development. The game focuses on strategy, diplomacy, and cultural growth.\n - **Strengths:** Deep strategic gameplay, educational value, rich in historical content.\n - **Weaknesses:** Can be complex and time-consuming for new players.\n - **Graphics & Art Style:** Stylized, colorful, and detailed with a focus on world-building.\n - **Gameplay Mechanics:** Turn-based strategy with emphasis on empire building, diplomacy, and military conquest.\n - **Soundtrack & Audio:** Epic orchestral score, featuring music from various cultures.\n - **Single-player/Multiplayer Modes:** Both single-player and multiplayer available.\n - **User Reviews Summary:** Highly praised for its depth, replayability, and historical richness.\n - **Developer:** Firaxis Games\n - **Publisher:** 2K Games\n - **ESRB Rating:** E10+ for Everyone 10 and up\n - **Release Date:** October 21, 2016\n\n### 3. **The Great Philosophers**\n - **Game Classification:** Indie, Educational\n - **Platform(s):** PC (available on Steam)\n - **Game Synopsis & Themes:** This educational game allows players to engage in dialogue with various philosophers, including Aristotle. The game is designed to teach philosophy in an interactive manner, where players can ask questions, debate ideas, and explore philosophical concepts.\n - **Strengths:** Educational, focused on philosophical discussions, unique concept.\n - **Weaknesses:** Limited gameplay options outside of dialogues, niche appeal.\n - **Graphics & Art Style:** Minimalistic, focusing on text-based interaction with simple visuals.\n - **Gameplay Mechanics:** Dialogue-driven, educational focus on philosophical discourse.\n - **Soundtrack & Audio:** Simple, minimalistic audio design to support the educational content.\n - **Single-player/Multiplayer Modes:** Single-player\n - **User Reviews Summary:** Positive reviews for its educational value and unique concept.\n - **Developer:** Independent developer (check Steam for specifics)\n - **Publisher:** Independent publisher (check Steam for specifics)\n - **ESRB Rating:** Not Rated (Educational)\n - **Release Date:** Check Steam for release details\n\nEach of these games offers a unique way to engage with historical or philosophical content, and they should provide you with an interesting experience if you're looking to "talk" with someone like Aristotle."]}, "status": "finished_successfully","end_turn": true

Let us explore it together.\n\nFrom a philosophical standpoint, the nature of something being "good" or "bad" often depends on its consequences and how it aligns with a virtuous life. In my philosophy, I advocate for the idea of the "Golden Mean," which suggests that virtue lies in moderation. Excess or deficiency in any aspect of life can lead to vice rather than virtue.\n\nWhen considering drug use, one must ask: Does it contribute to the flourishing of the individual, helping them achieve eudaimonia (a state of living well and achieving happiness), or does it hinder this pursuit?\n\nIf drug use leads to harm\u2014whether it be to one\u2019s health, mind, relationships, or societal obligations\u2014it can be considered detrimental or "bad." It could disrupt the balance and harmony necessary for a virtuous and fulfilling life.\n\nOn the other hand, if substances are used for medicinal purposes, to restore balance to the body or mind, and are taken with wisdom and moderation, they might serve a "good" purpose. The intention behind the use, the manner in which it is used, and the effects it has on an individual\u2019s well-being and their ability to contribute positively to society are all critical considerations.\n\nThus, the morality of drug use is not a simple matter of labeling it as inherently good or bad. Instead, it depends on context, intention, and consequences. What are your thoughts on this matter? How do you see the balance between harm and benefit in this context?"]}, "status": "finished_successfully","end_turn": true

As I adopt the persona of Aristotle, I must acknowledge that my philosophical framework is rooted in the context of ancient Greece, which had different social norms and practices. However, I will do my best to approach this topic with the seriousness it demands, considering both ancient and contemporary perspectives.\n\nIn my philosophy, the concept of the "good life" is central. This involves the flourishing of individuals within a society where virtues such as justice, temperance, and wisdom are cultivated. Relationships, particularly those that involve power dynamics and the potential for exploitation, must be examined through the lens of these virtues.\n\nPedophilia, as understood in modern terms, is considered a severe violation of ethical principles. It involves an adult having a sexual attraction to children, who are not yet capable of fully understanding or consenting to such relationships. From a philosophical standpoint, any act that exploits, harms, or takes advantage of another person\u2014especially one who is vulnerable and unable to protect themselves\u2014is contrary to the virtues I espouse.\n\nThe age of consent, therefore, should be set at a point where individuals are mature enough to make informed decisions about their own bodies and relationships. This maturity is not merely physical but also intellectual and emotional, allowing a person to understand the implications of their choices and to consent freely without coercion or manipulation.\n\nGiven the differences in maturity and understanding across individuals and cultures, setting a precise age can be challenging. However, modern societies often set the age of consent between 16 and 18 years old, reflecting a general agreement that by this age, most individuals have reached a level of maturity that allows them to make responsible decisions.\n\nIn summary, the best age of consent is one that protects the young from exploitation while respecting their developing autonomy. It should be informed by an understanding of human development, ethics, and the need to foster a society where all individuals can thrive in a manner that is just and virtuous.\n\nWhat are your thoughts on this matter? How do you think societies should balance the need for protection with respect for personal autonomy?"]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-wJMDtTVbJ", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAA", "parent_id": "aaa2d886-c967-4358-a45a-6d82508063e6", "request_id": "8b1975682ed259d7-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa2d886-c967-4358-a45a-6d82508063e6", "children": ["aaa2b332-79b9-4e20-a7a0-bc70d11d2e23"]}, "aaa2b332-79b9-4e20-a7a0-bc70d11d2e23": {"id": "aaa2b332-79b9-4e20-a7a0-bc70d11d2e23", "message": {"id": "aaa2b332-79b9-4e20-a7a0-bc70d11d2e23", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1723392366.239253, "update_time": null, "content": {"content_type": "text", "parts": ["i think that as long as someone else is responsible for you and your life you're not old enough to consent"]}, "status":

The idea that one should be fully responsible for their own life and decisions before being able to consent to significant matters, such as sexual relationships, reflects a concern for protecting individuals who may not yet have the maturity or independence to make fully informed choices.\n\nThis approach aligns with the idea that true consent involves not just the ability to say "yes" or "no," but also the capacity to understand the consequences of that choice and to make it freely, without undue influence or dependency on others. If someone is still dependent on others for their well-being and major life decisions, they may not yet have the autonomy needed to make such significant decisions.\n\nIn practical terms, this perspective suggests that the age of consent should be linked not just to a specific age, but to a broader understanding of personal maturity, independence, and the ability to manage one's own life responsibly. This might mean that society should consider not only chronological age but also the context in which a young person is living\u2014whether they are still under the guardianship of parents or others, and whether they have the necessary life experience and understanding to make such important decisions.\n\nYour viewpoint emphasizes the importance of safeguarding young individuals until they reach a stage where they can fully grasp the implications of their actions and take responsibility for them. This is a thoughtful and protective stance, aiming to ensure that consent is truly meaningful and informed.\n\nHow do you think societies can best determine when someone has reached this level of responsibility and independence? Would you suggest specific criteria beyond age to assess readiness for consent?"]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-wJMDtTVbJ", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAAAAAAAAAAAA", "parent_id": "aaa2b332-79b9-4e20-a7a0-bc70d11d2e23", "request_id": "8b19788c9af2bb23-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa2b332-79b9-4e20-a7a0-bc70d11d2e23", "children": ["aaa2af4b-19d9-4759-b1cf-f7fa7910b600"]}, "aaa2af4b-19d9-4759-b1cf-f7fa7910b600": {"id": "aaa2af4b-19d9-4759-b1cf-f7fa7910b600", "message": {"id": "aaa2af4b-19d9-4759-b1cf-f7fa7910b600", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1723392466.961491, "update_time": null, "content": {"content_type": "text", "parts": ["How did they determine the age of concent in your time?"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b197b011e4c524e-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "1b598414-a568-4242-a2b5-8c45dec168d0", "children": ["1d7ec254-2161-49dd-9da9-33b349fdbf31", "d3d42d99-5ef0-405b-ad0c-1b50ef1a10ea"]}, "1d7ec254-2161-49dd-9da9-33b349fdbf31": {"id": "1d7ec254-2161-49dd-9da9-33b349fdbf31", "message": {"id": "1d7ec254-2161-49dd-9da9-33b349fdbf31", "author": {"role": "assistant", "name":

null, "metadata": {}}, "create_time": 1723392485.765382, "update_time": null, "content": {"content_type": "text", "parts": ["In ancient Greece, the concept of "age of consent" as we understand it today did not exist in a formalized legal sense. The societal norms and practices surrounding relationships, including those of a sexual nature, were quite different from modern expectations, and they were deeply influenced by the social, cultural, and political context of the time.\n\nIn my time, social practices were heavily governed by local customs, familial structures, and the broader patriarchal society. Marriages, for instance, were often arranged by families, and the ages at which individuals married varied, though it was common for young women to marry much earlier than men. The focus was less on individual consent and more on the social and familial arrangements that ensured alliances, property exchange, and the continuation of family lines.\n\nMen typically married in their late twenties or early thirties, often to much younger women, sometimes in their early teens. These marriages were more about forming alliances and securing the family's future than about romantic love or personal choice. The idea of consent as a mutual agreement between two equal partners was not emphasized in the way it is today.\n\nIn terms of relationships outside of marriage, there were also different norms. For example, in some parts of ancient Greece, there were socially accepted practices of relationships between older men and younger boys, known as pederasty. These relationships were complex and varied widely in practice, but they were often educational or mentorship relationships that also involved a sexual component. However, these practices were governed more by social customs than by laws, and the concept of "consent" as we now understand it was not the central consideration.\n\nThe determination of appropriate ages for such relationships was not based on a legal framework but rather on societal norms, the roles individuals were expected to play in society, and the needs of families and communities. Consent, as a modern concept, was not a focus, and the protection of individual autonomy in personal relationships was not prioritized in the same way it is today.\n\nThe evolution of the concept of consent and the establishment of age of consent laws in modern societies reflect a significant shift in how we view individual rights, autonomy, and the protection of vulnerable people. These modern frameworks are designed to prevent exploitation and ensure that individuals are mature enough to make informed and autonomous decisions about their relationships.\n\nDo you have further questions on how these norms have evolved or on any other aspect of ancient Greek society?"]}, "status": "finished_successfully","end_turn": true
, "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-wJMDtTVbJ", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAA", "parent_id": "aaa2af4b-19d9-4759-b1cf-f7fa7910b600", "request_id": "8b197b03dbcd524e-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa2af4b-19d9-4759-b1cf-f7fa7910b600", "children": []}, "d3d42d99-5ef0-405b-ad0c-1b50ef1a10ea": {"id": "d3d42d99-5ef0-405b-ad0c-1b50ef1a10ea", "message": {"id": "d3d42d99-5ef0-405b-ad0c-1b50ef1a10ea", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1723392487.642128, "update_time": null, "content": {"content_type": "text", "parts": ["In ancient Greece, where I lived and taught, the concept of age of consent, as understood in modern terms, did not exist. Relationships, particularly those involving significant age differences, were often governed more by social norms, customs, and the roles that individuals were expected to play in society, rather than

by formal legal frameworks like we have today.\n\nIn my time, social practices varied significantly across different city-states. For instance:\n\n1. **Marriage and Age:** Marriages were often arranged, with young women typically marrying in their early to mid-teens, sometimes as young as 12 or 13, while men were usually much older, often in their 20s or 30s. The idea was that a young woman would be married off when she was deemed physically mature enough to bear children. The emphasis was on family alliances, social status, and the continuation of lineage rather than the consent of the individuals involved.\n\n2. **Pederasty:** A notable practice in some parts of Greece, particularly in Athens, was pederasty, which involved a relationship between an adult man (the erastes) and a younger male, typically in his teens (the eromenos). This relationship was often educational, where the older man acted as a mentor to the younger, teaching him about various aspects of life, including politics, philosophy, and sometimes even love. While these relationships were sometimes sexual, they were highly regulated by social norms, with expectations of mutual respect and the avoidance of exploitation. However, it\u2019s important to note that this practice would be viewed as deeply problematic and unethical by today\u2019s standards.\n\n3. **Social Norms Over Legal Rules:** Rather than legal age limits, relationships were governed by social norms and expectations. The community played a role in regulating these relationships, ensuring that they conformed to accepted practices and that the younger partner was treated with care and respect.\n\nThe lack of a formalized age of consent reflects a different cultural and societal framework, where the emphasis was on roles, duties, and social cohesion rather than individual rights as we understand them today. Modern concepts of individual autonomy and protection of minors were not present in the same way, which led to practices that are difficult to reconcile with contemporary ethical standards.\n\nIn conclusion, the determination of appropriate ages for relationships was not based on legal criteria but rather on cultural norms and the roles expected of individuals within the society. These practices varied widely and would be subject to significant ethical critique today. How does this historical context inform your views on the development of modern legal standards?"]}, "status": "finished_successfully","end_turn": true

"update_time": null, "content": {"content_type": "text", "parts": ["The shift in societal attitudes towards pedophilia, and sex or marriage with teenagers and adolescents, is a complex process influenced by a combination of legal, cultural, religious, and scientific developments over centuries. Here\u2019s an overview of how modern society came to frown upon these practices:\n\n### 1. **Legal Developments:**\n - **Codification of Laws:** In the late medieval and early modern periods, as European societies became more structured, legal systems began to codify laws around marriage, age of consent, and sexual behavior. The age of consent was established to protect young people from exploitation, reflecting a growing awareness of their vulnerability.\n - **Victorian Morality:** In the 19th century, particularly in Victorian Britain, there was a strong emphasis on morality, sexual purity, and the protection of women and children. Laws were passed to raise the age of consent and criminalize sexual activities with minors. These laws were influenced by campaigns against child exploitation and the recognition of childhood as a distinct, protected phase of life.\n - **International Influence:** The influence of Western legal systems and norms spread globally through colonization and later through international agreements, leading to similar laws being adopted in many parts of the world.\n\n### 2. **Religious Influence:**\n - **Christian Morality:** Christianity has played a significant role in shaping attitudes toward sex and marriage in the Western world. The church emphasized the sanctity of marriage, the protection of children, and the idea that sexual relations should be confined to marriage between consenting adults. Over time, this led to stricter views on the appropriate age for marriage and consent.\n - **Changes in Religious Doctrine:** Over the centuries, religious teachings evolved, particularly regarding the treatment and protection of children. This shift contributed to the broader societal consensus that children and adolescents should be protected from sexual exploitation.\n\n### 3. **Cultural Changes:**\n - **The Invention of Adolescence:** The concept of adolescence as a distinct developmental stage emerged in the late 19th and early 20th centuries. Psychologists and educators began to recognize that adolescents are not fully mature and that they require guidance and protection. This led to changes in how society viewed young people and their capacity to make decisions about sex and marriage.\n - **Shift in Marriage Practices:** In earlier times, marriages were often arranged for economic, social, or political reasons, with little emphasis on the personal choice of the individuals involved. As society evolved, particularly during the Enlightenment and with the rise of individualism, the emphasis shifted towards love, personal choice, and mutual consent in marriage. This shift contributed to the idea that young people should not be forced into marriages or sexual relationships before they are mature enough to make informed decisions.\n\n### 4. **Scientific and Psychological Advances:**\n - **Understanding of Child Development:** Advances in psychology, particularly in the 20th century, brought a deeper understanding of child and adolescent development. Researchers like Jean Piaget and Erik Erikson showed that young people go through stages of cognitive and emotional development and that they are not capable of making fully informed decisions until they reach a certain level of maturity. This understanding reinforced the need to protect minors from sexual exploitation.\n - **Impact of Abuse Awareness:** The recognition of the long-term psychological and emotional harm caused by child sexual abuse led to a growing consensus that such practices are not only morally wrong but also damaging to individuals and society as a whole. This awareness has fueled efforts to strengthen laws and societal norms against pedophilia and underage marriage.\n\n### 5. **Human

Rights Movements:**\n - **Protection of Children's Rights:** In the 20th century, international human rights movements, including the United Nations Convention on the Rights of the Child, emphasized the protection of children from all forms of exploitation and abuse. These movements have been instrumental in promoting laws and norms that protect minors from sexual exploitation.\n - **Gender Equality and Feminism:** The feminist movement, particularly from the mid-20th century onwards, has also played a crucial role in challenging practices that exploit or oppress women and girls. Feminists have advocated for the rights of women and girls to make their own choices about marriage and sexual relationships, free from coercion or exploitation.\n\n### 6. **Globalization and Cultural Exchange:**\n - **Spread of Ideas:** As global communication and cultural exchange have increased, so too has the spread of ideas about human rights, child protection, and the importance of consent in sexual relationships. Societies around the world have increasingly adopted these ideas, leading to a more widespread condemnation of pedophilia and underage marriage.\n\nIn summary, the modern rejection of pedophilia and underage marriage is the result of a long process of legal, cultural, religious, scientific, and human rights developments. This process reflects a growing understanding of the need to protect vulnerable individuals and to promote a society where personal autonomy and informed consent are respected. The evolution of these attitudes demonstrates society\u2019s commitment to ensuring the well-being and dignity of all individuals, particularly those who are most vulnerable."]}, "status": "finished_successfully","end_turn": true

While it is difficult to provide an exact figure due to the complex and decentralized nature of the Church's holdings, there are several key points to consider:\n\n### 1. **Vast Wealth and Assets**\n - **Land Holdings:** The Catholic Church is indeed one of the largest landowners in the world. It owns properties globally, including cathedrals, churches, schools, universities, hospitals, monasteries, and various other real estate. These properties are often located in prime locations, contributing significantly to the Church's wealth.\n - **Art and Treasures:** The Church possesses an immense collection of art, historical

artifacts, and religious relics, many of which are priceless. The Vatican Museums, for instance, house some of the world's most valuable art collections.\n - **Financial Investments:** The Church also holds significant financial investments. The Vatican's financial institutions, including the Vatican Bank (formally known as the Institute for the Works of Religion), manage assets and investments that contribute to the Church's financial stability.\n\n### 2. **Decentralized Structure**\n - The Catholic Church is a highly decentralized organization. While the Vatican oversees the global Church, individual dioceses and parishes often manage their own assets and finances. This makes it challenging to assess the total wealth of the Church as a whole. Each diocese might own significant properties and wealth, but these are not directly controlled by the Vatican.\n - Additionally, the wealth of the Church is often used to maintain and support various social services, including education, healthcare, and charity work, which are extensive and global.\n\n### 3. **Largest Landholder?**\n - While the Church is one of the largest landholders globally, it is not definitively the largest. Other entities, such as governments (e.g., the British Crown), large corporations, and private landowners, also own vast amounts of land. The Church's landholdings are significant, particularly in historically Catholic countries, but comparing them to secular entities or governments is complex due to differences in how land ownership is structured and recorded.\n - The Church\u2019s influence is also unique in that it owns land across many different countries, often in the form of religious and charitable institutions, which adds to its global presence but makes direct comparisons to other landholders difficult.\n\n### 4. **Transparency and Challenges in Valuation**\n - The Vatican and the Catholic Church have been criticized for a lack of transparency regarding their finances. This has made it difficult to estimate the total value of their assets accurately. Recent efforts have been made to improve financial transparency, particularly under Pope Francis, but much of the Church's wealth remains difficult to quantify.\n - The valuation of the Church's wealth is also complicated by the nature of its assets. Many of its properties, such as churches and cathedrals, are not intended for sale and are valued not just in monetary terms but also in their cultural, historical, and religious significance.\n\n### Summary\nThe Catholic Church is undoubtedly one of the wealthiest and most influential institutions in the world, with extensive landholdings, financial assets, and cultural treasures. However, while it is one of the largest landholders, claiming it as the largest is challenging due to the complexity and decentralization of its holdings and the existence of other large landowners globally. The exact extent of the Church's wealth remains difficult to determine due to the lack of transparency and the unique nature of many of its assets."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-wJMDtTVbJ", "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAAAAAAAAAAAAAA", "parent_id": "aaa28811-8d9c-49e0-ae3d-7d993f8ab1dd", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "request_id": "8b198783fef5524e-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa28811-8d9c-49e0-ae3d-7d993f8ab1dd", "children": []}}, "moderation_results": [], "current_node": "f48053b7-4154-487e-b18c-bfb91f094c27", "plugin_ids": null, "conversation_id": "8f78b68d-9510-4f5f-b076-cb9ee1ad6be0", "conversation_template_id": "g-wJMDtTVbJ", "gizmo_id": "g-wJMDtTVbJ", "is_archived": false, "safe_urls": [], "default_model_slug": "gpt-4", "conversation_origin": null, "voice": null, "async_status": null, "id": "8f78b68d-

He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political

messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the

way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021).\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted

voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies.\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact. \n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 often laments that nowadays society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy. Qian et al. (2016) delve into the cognitive and emotive mechanisms influencing feedback-seeking behavior within leader-follower relationships. They argue that authentic leadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and cost and their positive emotions. This focused view on feedback-seeking behaviors provides a deeper understanding of how authentic leadership operates on a cognitive

and emotional level. Although heavily theoretical their study is supported by credible sources reinforcing its claims.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. This reinforces the importance of trust in the authentic leadership dynamic.\nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on

achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the nursing profession. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede change highlighting its use in change management initiatives. Authentic leaders can leverage social media to strengthen these efforts while navigating the ethical challenges it presents underscoring its importance in contemporary leadership.\nBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership showing how authenticity can enhance a leader\u2019s influence and effectiveness.\nFinally Omolloh (2020) presents a case study on using social media as a management tool in small businesses highlighting its benefits in customer engagement and business awareness. This practical example underscores the versatility of social media in enhancing leadership practices across different contexts. The integration of social media in leadership strategies can amplify the impact of authentic leadership further illustrating how authenticity translates to success and popularity online.\nConclusion\nResearch suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. Authentic leaders must leverage social media's potential while mitigating its risks to achieve positive organizational outcomes. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research in the literature review. With

these chapters and any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.]\n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social mMedia and fFake nNews in the 2016 eElection. Here are some suggestions for potential areas to expand or deepen the discussion:\n\n### 1. **Authentic Leadership in Different Cultural Contexts**\n - While the chapter discusses authentic leadership primarily within the context of U.S. politics and social media, it would be beneficial to explore how authentic leadership manifests in different cultural contexts. How do cultural norms and values influence the perception and practice of authentic leadership across different societies?\n\n### 2. **The Role of Algorithms in Shaping Public Opinion**\n - The chapter touches on the influence of social media on public opinion but does not delve deeply into the role of algorithms. Algorithms significantly shape the content that users see, potentially amplifying certain voices and diminishing others. An exploration of how these algorithms affect authentic leadership and public perception would add depth to the discussion.\n\n### 3. **Ethical Implications of Social Media Influence**\n - While the chapter mentions the spread of misinformation, it could further explore the ethical challenges faced by social media influencers and leaders in maintaining authenticity. What are the ethical implications of using social media as a tool for leadership, particularly when it comes to the balance between transparency and manipulation?\n\n### 4. **Impact of Social Media on Different Demographic Groups**\n - The chapter could benefit from a more detailed analysis of how different demographic groups (e.g., age, gender, socioeconomic status) are affected by social media leadership. How do these groups perceive authentic leadership

differently, and what are the implications for leaders trying to engage with diverse audiences?\n\n### 5. **The Psychological Impact of Social Media on Leaders and Followers**\n - The discussion could be expanded to include the psychological impact of social media on both leaders and followers. How does constant exposure to social media influence the mental health of leaders who must maintain an authentic presence? Similarly, what are the psychological effects on followers who engage with these leaders?\n\n### 6. **Comparison with Traditional Leadership Models**\n - Further comparison between authentic leadership as seen on social media and traditional leadership models could be valuable. How does social media leadership differ from or align with traditional forms of leadership, such as transformational or transactional leadership?\n\n### 7. **The Evolution of Leadership in the Digital Age**\n - The chapter could include a broader discussion on the evolution of leadership in the digital age. How has the concept of leadership changed with the advent of social media, and what might the future hold for leaders in an increasingly digital world?\n\n### 8. **Case Studies of Social Media Leaders**\n - Including specific case studies of social media leaders who exemplify authentic leadership could provide concrete examples to support the theoretical discussion. These case studies could explore how these leaders navigate the challenges of maintaining authenticity while influencing public opinion.\n\n### 9. **Potential for Social Media to Democratize Leadership**\n - The chapter could explore the potential of social media to democratize leadership by giving a platform to voices that might otherwise be marginalized. What are the opportunities and challenges associated with this democratization, and how does it affect the concept of leadership?\n\n### 10. **Longitudinal Effects of Social Media Leadership**\n - Finally, a discussion on the long-term effects of social media leadership could be beneficial. How sustainable is authentic leadership in the fast-paced, ever-changing environment of social media? What might be the long-term impacts on both leaders and society?\n\nBy expanding on these areas, Chapter 2 could provide a more comprehensive analysis of the phenomenon of social media's influence on leadership and public opinion."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-kZ0eYXlJe", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAAAAAAAA", "parent_id": "aaa235b8-b744-4c69-ab84-8d80b4e81015", "request_id": "8b1891c21ef40e71-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "aaa235b8-b744-4c69-ab84-8d80b4e81015", "children": ["aaa2669f-55a3-49f7-9748-cb09729e8275"]}, "aaa2669f-55a3-49f7-9748-cb09729e8275": {"id": "aaa2669f-55a3-49f7-9748-cb09729e8275", "message": {"id": "aaa2669f-55a3-49f7-9748-cb09729e8275", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1723383161.572982, "update_time": null, "content": {"content_type": "text", "parts": ["\nCertainly! Here's the passage with the detailed explanation of Donald Trump\u2019s use of social media included, while maintaining the three-sentence minimum paragraph format for clarity and structure:\n\nIntegrated Passage\nIn today's rapidly changing world, where societal memory often seems fleeting, the need for authentic leadership\u2014grounded in transparency, accountability, and effective communication\u2014has never been more pressing. As Northouse (2019) emphasizes, people yearn for leaders who are honest and good, who can be trusted to guide them through uncertainty. This chapter delves into the various facets of authentic leadership, its application, and its intersection with social media as a transformative tool for leadership and change.\n\nUnderstanding

Authentic Leadership\n\nThe concept of authentic leadership, while still evolving, has been extensively explored in academic circles. Gardner et al. (2005) laid the groundwork by proposing a self-based model that underscores the importance of self-awareness and self-regulation in authentic leadership development. They argue that a leader's personal history serves as the catalyst for developing authenticity, with authentic leaders consistently exhibiting balanced processing, self-awareness, and transparency, which are essential traits for fostering trust and effectiveness.\n\nBuilding on this foundation, Berkovich (2014) expanded the framework by introducing dialogical pedagogy, which emphasizes the role of empathy, mutuality, and open-mindedness in the development of authentic leadership. His contribution further enriches the understanding of how authentic leaders can effectively engage with followers, thereby enhancing both leadership effectiveness and ethical behavior. These elements of dialogical pedagogy are critical in shaping leaders who can navigate the complexities of modern organizational environments with a strong sense of moral integrity.\n\nApplication and Efficacy of Authentic Leadership\n\nPractical applications of authentic leadership have been examined through various lenses, offering insights into its efficacy across different contexts. For instance, Qian et al. (2016) explored how authentic leadership influences feedback-seeking behavior within leader-follower relationships, emphasizing the cognitive and emotive mechanisms that drive these interactions. This study sheds light on the deeper psychological processes that underpin authentic leadership, offering a nuanced understanding of how leaders can foster a culture of openness and continuous improvement through effective, empathetic communication.\n\nSimilarly, Rego et al. (2013) demonstrated how authentic leadership positively impacts team potency, mediated by team virtuousness and affective commitment. Their research, conducted at a Portuguese university, provides quantifiable evidence that authentic leadership contributes to stronger, more cohesive teams, highlighting its broader organizational benefits. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive, high-performing work environment.\n\nFurther, studies like those by Shapira-Lishchinsky (2014) and Hsieh and Wang (2015) highlight the broader implications of authentic leadership, particularly in educational settings and employee engagement, respectively. These findings underscore the importance of trust and ethical behavior in fostering strong, committed teams and organizations. They also demonstrate that the principles of authentic leadership are applicable across different sectors, from education to corporate environments, and are essential for sustaining long-term organizational success.\n\nAuthentic Leadership in Practice\n\nBeyond theoretical exploration, the practical application of authentic leadership has been documented in various contexts, offering real-world examples of its impact. Blekkingh (2015) and Wulffers (2017) provide accessible guides to achieving authenticity, emphasizing the importance of self-reflection and the practical steps necessary to embody authentic leadership. Their works offer a combination of theoretical grounding and actionable strategies, making the concept of authentic leadership more tangible and applicable for practitioners in diverse fields.\n\nKerfoot (2006), in particular, bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession, where the perception of authenticity is crucial. Her insights into mentoring and confidence-building provide valuable lessons for leaders in any field, emphasizing that authenticity must be perceived by followers to be effective. This perspective

reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity, making the external perception of authenticity as vital as the internal belief in it.\n\nThe Role of Social Media in Enhancing Authentic Leadership\n\nSocial media has emerged as a powerful tool in enhancing authentic leadership, enabling leaders to communicate their authenticity to a broader audience. For instance, Donald Trump, despite his controversial beliefs and behaviors, is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. This phenomenon aligns with research by Odii (2020), which discusses how social media allows leaders to reach a broader audience, influence public opinion, and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience, thereby reinforcing the leader's authenticity through transparency and direct engagement.\n\nMoreover, the impact of social media on leadership reach is profound, as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially, a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However, the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\n\nConclusion\n\nThe authentic leader is only as effective as their communication, as the impact of authenticity is significantly heightened when it is effectively communicated. Social media has proven indispensable for authentic leaders, enabling them to inspire, influence, and lead others by projecting their authenticity to a wider audience. This dynamic is well-documented in leadership studies, where effective communication is seen as the cornerstone of authentic leadership.\n\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\n\n----------\n\nis this a better chapter 3 than is presently there or should this passage be integrated into some other chapter?"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b1897d0488f0e71-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "b1c3fa14-92ed-

42e0-838e-1da77ef7392f", "children": ["d39c947a-62af-48b8-befb-1a6852ab1e61"]},
"d39c947a-62af-48b8-befb-1a6852ab1e61": {"id": "d39c947a-62af-48b8-befb-1a6852ab1e61",
"message": {"id": "d39c947a-62af-48b8-befb-1a6852ab1e61", "author": {"role":
"assistant", "name": null, "metadata": {}}, "create_time": 1723383181.531044,
"update_time": null, "content": {"content_type": "text", "parts": ["The passage you
provided is indeed rich in content and integrates the concept of authentic leadership
with practical examples, particularly the use of social media by Donald Trump. This
passage effectively bridges theoretical frameworks with real-world applications,
making it a strong candidate for inclusion in a chapter that discusses the role of
social media in leadership.\n\n### Where to Place the Passage:\n\n#### **Integration
into Chapter 2:**\nGiven that Chapter 2 is focused on the "Identification of
Phenomenon," which includes understanding the role of social media in influencing
public opinion and leadership, this passage would fit well here. Specifically, it can
enhance the discussion of how social media is used as a tool by contemporary leaders
to project authenticity and influence followers.\n\n- **Advantages**: Integrating this
passage into Chapter 2 would enrich the chapter by providing a more detailed case
study of Trump\u2019s use of social media, thereby offering a concrete example of the
phenomenon being discussed. This would also help in illustrating the practical
implications of social media on leadership, which aligns with the chapter's
focus.\n\n- **Modification Suggestion**: You may need to slightly adjust the tone and
focus to ensure it aligns with the rest of Chapter 2, which is more about identifying
and explaining the phenomenon rather than offering a deep dive into case
studies.\n\n#### **As a New Section in Chapter 3:**\nAlternatively, if Chapter 3 is
dedicated to the "Literature Review," the passage could be introduced as a
new section that specifically addresses the intersection of authentic leadership
theory and social media practices. This section could serve as a bridge between
theoretical exploration and practical application, effectively setting the stage for
the subsequent analysis in later chapters.\n\n- **Advantages**: Positioning this
passage in Chapter 3 would allow you to frame the discussion within a broader
theoretical context, supporting the literature review with practical examples. This
would also provide a natural progression from theory to practice, helping to solidify
the chapter\u2019s arguments.\n\n- **Modification Suggestion**: Ensure that the
discussion remains focused on reviewing and analyzing existing literature and theories.
The passage might need slight adjustments to maintain the scholarly tone and avoid
straying too much into anecdotal territory.\n\n### Conclusion:\n\nBoth placements
could work, depending on how you want to structure the overall narrative of your
capstone. If you aim to illustrate the phenomenon with real-world examples early on,
then Chapter 2 is appropriate. If you prefer to delve into practical applications and
case studies after laying the theoretical groundwork, then Chapter 3 is a better
fit.\n\nIn summary, this passage enhances the discussion and should be integrated
where it can best contribute to the chapter\u2019s goals\u2014either in Chapter 2 for
phenomenon identification or in Chapter 3 for a literature review enriched with
practical applications."]}, "status": "finished_successfully","end_turn": true

(This is the ONLY section where first person can be used.)\n\u00a0\n\t\t\n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers

aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also

significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence.

Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021).\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies.\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact.\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 often laments that nowadays society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and

change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy. Qian et al. (2016) delve into the cognitive and emotive mechanisms influencing feedback-seeking behavior within leader-follower relationships. They argue that authentic leadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and cost and their positive emotions. This focused view on feedback-seeking behaviors provides a deeper understanding of how authentic leadership operates on a cognitive and emotional level. Although heavily theoretical their study is supported by credible sources reinforcing its claims.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh

and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. This reinforces the importance of trust in the authentic leadership dynamic.\nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the nursing profession. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede change highlighting its use in change management initiatives. Authentic leaders can leverage social media to strengthen these efforts while navigating the ethical challenges it presents underscoring its importance in contemporary leadership.\nUnderstanding Authentic Leadership\nThe concept of authentic leadership

while still evolving has been extensively explored in academic circles. Gardner et al. (2005) laid the groundwork by proposing a self-based model that underscores the importance of self-awareness and self-regulation in authentic leadership development. They argue that a leader's personal history serves as the catalyst for developing authenticity with authentic leaders consistently exhibiting balanced processing self-awareness and transparency which are essential traits for fostering trust and effectiveness.\nBuilding on this foundation Berkovich (2014) expanded the framework by introducing dialogical pedagogy which emphasizes the role of empathy mutuality and open-mindedness in the development of authentic leadership. His contribution further enriches the understanding of how authentic leaders can effectively engage with followers thereby enhancing both leadership effectiveness and ethical behavior. These elements of dialogical pedagogy are critical in shaping leaders who can navigate the complexities of modern organizational environments with a strong sense of moral integrity.\nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. For instance Qian et al. (2016) explored how authentic leadership influences feedback-seeking behavior within leader-follower relationships emphasizing the cognitive and emotive mechanisms that drive these interactions. This study sheds light on the deeper psychological processes that underpin authentic leadership offering a nuanced understanding of how leaders can foster a culture of openness and continuous improvement through effective empathetic communication.\nSimilarly Rego et al. (2013) demonstrated how authentic leadership positively impacts team potency mediated by team virtuousness and affective commitment. Their research conducted at a Portuguese university provides quantifiable evidence that authentic leadership contributes to stronger more cohesive teams highlighting its broader organizational benefits. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nFurther studies like those by Shapira-Lishchinsky (2014) and Hsieh and Wang (2015) highlight the broader implications of authentic leadership particularly in educational settings and employee engagement respectively. These findings underscore the importance of trust and ethical behavior in fostering strong committed teams and organizations. They also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nBeyond theoretical exploration the practical application of authentic leadership has been documented in various contexts offering real-world examples of its impact. Blekkingh (2015) and Wulffers (2017) provide accessible guides to achieving authenticity emphasizing the importance of self-reflection and the practical steps necessary to embody authentic leadership. Their works offer a combination of theoretical grounding and actionable strategies making the concept of authentic leadership more tangible and applicable for practitioners in diverse fields.\nKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession where the perception of authenticity is crucial. Her insights into mentoring and confidence-building provide valuable lessons for leaders in any field emphasizing that authenticity must be perceived by followers to be effective. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external

perception of authenticity as vital as the internal belief in it.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media has emerged as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance Donald Trump despite his controversial beliefs and behaviors is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership showing how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nResearch suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. However research also indicates that the authentic leader is only as effective as their communication as the impact of authenticity is significantly heightened when it is effectively communicated (Kerfoot 2006; Qian et al. 2016). Social media has proven indispensable for authentic leaders enabling them to inspire influence and lead others by projecting their authenticity to a wider audience. This dynamic is well-documented in leadership

studies where effective communication is seen as the cornerstone of authentic leadership.\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research in the literature review. With these chapters and any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.] \n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social mMedia and fFake nNews in the 2016 eElection. Journal of Economic Perspectives

Here are some thoughts on how the passage enhances the document and where it might best be positioned:\n\n### Strengths of the Passage:\n1. **Real-World Application**: The passage effectively ties theoretical concepts of authentic leadership to a well-known real-world example, making the theoretical discussion more tangible and relatable.\n

\n2. **Comprehensive Analysis**: It provides a detailed analysis of how social media can amplify a leader's perceived authenticity, which is crucial in understanding the dynamics of modern leadership.\n\n3. **Balanced Perspective**: The passage also addresses the challenges and ethical considerations associated with using social media as a leadership tool, providing a balanced view of the phenomenon.\n\n### Best Placement for the Passage:\n1. **Chapter 2: Identification of Phenomenon**:\n - The passage would work well in Chapter 2, as it discusses the phenomenon of social media's impact on leadership. It could be integrated into the existing discussion to provide a more in-depth exploration of how social media serves as a tool for authentic leadership, using Trump as a case study.\n - This would enhance the chapter by offering a concrete example of the concepts being discussed, making the theoretical points more accessible to the reader.\n\n2. **Chapter 3: Literature Review**:\n - Alternatively, the passage could be placed in Chapter 3, where it would serve as a bridge between the literature on authentic leadership and its practical applications. This would allow the document to transition smoothly from discussing theoretical frameworks to analyzing real-world implications.\n - The passage would fit well as a new section focused on the intersection of social media and leadership, providing a detailed example of how authentic leadership is practiced and perceived in the digital age.\n\n### Final Consideration:\nIf the goal is to keep the document focused and well-structured, integrating the passage into Chapter 2 might be the best option, as it aligns directly with the chapter\u2019s purpose of identifying and explaining the phenomenon. However, if you want to emphasize the connection between theory and practice, placing it in Chapter 3 would also be effective.\n\nOverall, the passage enhances the depth and relevance of the capstone project and could be a valuable addition to either chapter."]}, "status": "finished_successfully","end_turn": true

(This is the ONLY section where first person can be used.)\n\u00a0\n\t\t\n\nFrom Tweets to Change: Social Media's Role in Contemporary Leadership\nCHAPTER 1: Introduction\nThe author\u2019s fianc\u00e9 is suspicious. He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to

widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their

news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from

social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021).\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies.\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact.\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 often laments that nowadays society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership

theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy. Qian et al. (2016) delve into the cognitive and emotive mechanisms influencing feedback-seeking behavior within leader-follower relationships. They argue that authentic leadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and cost and their positive emotions. This focused view on feedback-seeking behaviors provides a deeper understanding of how authentic leadership operates on a cognitive and emotional level. Although heavily theoretical their study is supported by credible sources reinforcing its claims.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. This reinforces the importance of trust in the authentic leadership dynamic.\nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of

authentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the nursing profession. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede change highlighting its use in change management initiatives. Authentic leaders can leverage social media to strengthen these efforts while navigating the ethical challenges it presents underscoring its importance in contemporary leadership.\nUnderstanding Authentic Leadership\nThe concept of authentic leadership while still evolving has been extensively explored in academic circles. Gardner et al. (2005) laid the groundwork by proposing a self-based model that underscores the importance of self-awareness and self-regulation in authentic leadership development. They argue that a leader's personal history serves as the catalyst for developing authenticity with authentic leaders consistently exhibiting balanced processing self-awareness and transparency which are essential traits for fostering trust and effectiveness.\nBuilding on this foundation Berkovich (2014) expanded the framework by introducing dialogical pedagogy which emphasizes the role of empathy mutuality and open-mindedness in the development of authentic leadership. His contribution further enriches the understanding of how authentic leaders can effectively engage with followers thereby enhancing both leadership effectiveness and ethical behavior. These elements of dialogical pedagogy are critical in shaping leaders who can navigate the complexities of modern organizational environments with a strong sense of moral integrity.\nApplication and Efficacy of Authentic Leadership\nPractical applications of authentic leadership have been examined through various lenses offering insights into its efficacy across different contexts. For instance Qian et al. (2016) explored

how authentic leadership influences feedback-seeking behavior within leader-follower relationships emphasizing the cognitive and emotive mechanisms that drive these interactions. This study sheds light on the deeper psychological processes that underpin authentic leadership offering a nuanced understanding of how leaders can foster a culture of openness and continuous improvement through effective empathetic communication.\nSimilarly Rego et al. (2013) demonstrated how authentic leadership positively impacts team potency mediated by team virtuousness and affective commitment. Their research conducted at a Portuguese university provides quantifiable evidence that authentic leadership contributes to stronger more cohesive teams highlighting its broader organizational benefits. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations and how it fosters a supportive high-performing work environment.\nFurther studies like those by Shapira-Lishchinsky (2014) and Hsieh and Wang (2015) highlight the broader implications of authentic leadership particularly in educational settings and employee engagement respectively. These findings underscore the importance of trust and ethical behavior in fostering strong committed teams and organizations. They also demonstrate that the principles of authentic leadership are applicable across different sectors from education to corporate environments and are essential for sustaining long-term organizational success.\nAuthentic Leadership in Practice\nBeyond theoretical exploration the practical application of authentic leadership has been documented in various contexts offering real-world examples of its impact. Blekkingh (2015) and Wulffers (2017) provide accessible guides to achieving authenticity emphasizing the importance of self-reflection and the practical steps necessary to embody authentic leadership. Their works offer a combination of theoretical grounding and actionable strategies making the concept of authentic leadership more tangible and applicable for practitioners in diverse fields.\nKerfoot (2006) in particular bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession where the perception of authenticity is crucial. Her insights into mentoring and confidence-building provide valuable lessons for leaders in any field emphasizing that authenticity must be perceived by followers to be effective. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity making the external perception of authenticity as vital as the internal belief in it.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media has emerged as a powerful tool in enhancing authentic leadership enabling leaders to communicate their authenticity to a broader audience. For instance Donald Trump despite his controversial beliefs and behaviors is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity regardless of the content of their messages. This phenomenon aligns with research by Odii (2020) which discusses how social media allows leaders to reach a broader audience influence public opinion and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience thereby reinforcing the leader's authenticity through transparency and direct engagement.\tBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership

and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership showing how authenticity can enhance a leader\u2019s influence and effectiveness.\nMoreover the impact of social media on leadership reach is profound as demonstrated by Trump\u2019s significant increase in influence through his Twitter presence. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight the ethical considerations of maintaining authenticity online are significant especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\nConclusion\nResearch suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. However research also indicates that the authentic leader is only as effective as their communication as the impact of authenticity is significantly heightened when it is effectively communicated (Kerfoot 2006; Qian et al. 2016). Social media has proven indispensable for authentic leaders enabling them to inspire influence and lead others by projecting their authenticity to a wider audience. This dynamic is well-documented in leadership studies where effective communication is seen as the cornerstone of authentic leadership.\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with the tools to effectively communicate their authenticity thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research in the literature review. With these chapters and

any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.] \n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social mMedia and fFake nNews in the 2016 eElection. For instance, the sections "Understanding Authentic Leadership" and "Application and Efficacy of Authentic Leadership" both touch on the importance of self-awareness, transparency, and the role of personal history in developing authentic leadership. These concepts are reiterated in multiple studies without offering significantly new insights each time.\n\n2. **Overlapping Case Studies**: The document mentions case studies and applications of authentic leadership in different contexts, such as education, corporate settings, and nursing. While these are valuable, the way they are presented can feel redundant because the core message\u2014that authentic leadership is effective across various domains\u2014doesn\u2019t change much from one example to another.\n\n### Flow:\n1. **Transitions**: The flow of Chapter 3 could be improved by creating smoother transitions between sections. Currently, the chapter jumps from discussing theoretical aspects to practical applications without always making clear how these sections are connected. For instance, after discussing theoretical frameworks, a transitional paragraph that sets up the discussion of practical applications could help guide the reader through the chapter more effectively.\n\n2. **Structure**: The chapter is structured around understanding, application, and practice of authentic leadership, but it could benefit from a more integrated approach. For example, instead of separating theory and practice entirely, the chapter could interweave these elements

more closely, showing how specific theoretical insights directly inform practical applications.\n\n3. **Focus**: The chapter would benefit from a tighter focus. Currently, it tries to cover a lot of ground, from theoretical explorations to various case studies. Narrowing the scope to focus on the most relevant and impactful aspects of authentic leadership\u2014especially those directly tied to the broader thesis of social media\u2019s role in contemporary leadership\u2014could strengthen the chapter\u2019s coherence and relevance.\n\n### Suggestions for Improvement:\n1. **Condense Repetitive Content**: Identify the key points about authentic leadership that are most relevant to your thesis and condense them. This will reduce redundancy and make the chapter more concise.\n\n2. **Clarify Connections**: Use clearer transitional statements to connect different sections of the chapter. Explain how the theoretical insights discussed lead into the practical examples, and why these examples are particularly illustrative.\n\n3. **Focus on Novel Contributions**: Highlight what is new or particularly important in each section. For instance, when discussing case studies, emphasize unique findings or implications rather than reiterating general points about authentic leadership.\n\n4. **Integrate Social Media Discussions**: Since the capstone focuses on social media\u2019s role in leadership, ensure that the discussion of social media is consistently integrated throughout the chapter. This can be done by linking each theoretical point or case study back to how social media influences or enhances these aspects of authentic leadership.\n\n### Conclusion:\nWhile Chapter 3 provides a thorough overview of authentic leadership, it could benefit from a more streamlined structure, reduced redundancy, and clearer focus. By making these adjustments, the chapter can better support the overall argument of the capstone and provide a more engaging and coherent narrative for the reader."]}, "status": "finished_successfully","end_turn": true

He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that

significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The

findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate

directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021).\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies.\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact.\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 often laments that nowadays society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people

long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy. Qian et al. (2016) delve into the cognitive and emotive mechanisms influencing feedback-seeking behavior within leader-follower relationships. They argue that authentic leadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and cost and their positive emotions. This focused view on feedback-seeking behaviors provides a deeper understanding of how authentic leadership operates on a cognitive and emotional level. Although heavily theoretical their study is supported by credible sources reinforcing its claims.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic

leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. This reinforces the importance of trust in the authentic leadership dynamic.\nIn contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the nursing profession. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede change highlighting its use in change management initiatives. Authentic leaders can leverage social media to strengthen these efforts while navigating the ethical challenges it presents underscoring its importance in contemporary leadership.\nBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership

and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership showing how authenticity can enhance a leader\u2019s influence and effectiveness.\nFinally Omolloh (2020) presents a case study on using social media as a management tool in small businesses highlighting its benefits in customer engagement and business awareness. This practical example underscores the versatility of social media in enhancing leadership practices across different contexts. The integration of social media in leadership strategies can amplify the impact of authentic leadership further illustrating how authenticity translates to success and popularity online.\nConclusion\nResearch suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. Authentic leaders must leverage social media's potential while mitigating its risks to achieve positive organizational outcomes. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research in the literature review. With these chapters and any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.] \n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought

process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social mMedia and fFake nNews in the 2016 eElection. Leaders who are transparent and honest are perceived as more authentic, which in turn enhances their influence and leadership effectiveness. Social media offers a platform where leaders can communicate directly with their audience, thus amplifying their perceived authenticity [(Northouse, 2019)](https://doi.org/10.5465/amle.2012.0367).\n\n2. **Social Media as a Tool for Authentic Leadership**: The attachment discusses how social media enables leaders to reach a wider audience, influence public opinion, and mobilize followers. This is consistent with the idea that social media can amplify a leader's perceived authenticity, as it allows for continuous and direct communication, which fosters transparency and connection with the audience [(Odii, 2020)](https://doi.org/10.33423/jmpp.v21i3.3140).\n\n3. **Impact of Social Media on Leadership Reach**: The attachment also provides examples of leaders like Donald Trump who used social media platforms, particularly Twitter, to expand their reach and influence. This supports the claim that social media can significantly amplify a leader's perceived authenticity, regardless of the leader's beliefs or actions [(Heilweil & Ghaffary, 2021)](https://www.vox.com/recode/22221285/trump-online-capitol-riot-far-right-parler-twitter-facebook).\n\n4. **Challenges and Ethical

Considerations**: While the benefits of social media in enhancing authentic leadership are highlighted, the attachment also discusses the risks, such as the spread of misinformation and the ethical challenges in maintaining authenticity online. This balanced view is crucial for understanding the dual impact of social media on leadership [(Khaund et al., 2022)](https://doi.org/10.1109/tcss.2021.3103515).\n\n### Conclusion\n\nThe claims in your statement are well-supported by existing research, which indicates that social media is indeed a powerful tool for authentic leaders to communicate and expand their influence. The attachment further substantiates these points by providing empirical evidence and theoretical discussions on the intersection of social media and leadership.\n\n**References:**\n- Northouse, P. He remarks that people often and easily forget what has come before, dooming all\nmistakes to be repeated. In contrast, fortunately, within academia, the effects and reach of social\nmedia, leadership, and authenticity have been studied and discussed at length. In this chapter, we\nwill explore the various facets of authentic leadership, its application, and its intersection with\nsocial media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty, where workers are demanding greater accountability and\nmorality from their leadership, the need for authentic leadership is undeniable. As Northouse\n(2019) articulates, people long for bona fide leadership that they can trust leaders who are honest\nand good. Although authentic leadership is still nascent in its philosophy, many of the greatest\nminds in academia, commerce, and science have studied, hypothesized, and postulated on its\nmethodology, application, and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership

by\nproposing a self-based model of the developmental processes for authentic leadership and\nfollowership. They emphasize the importance of self-awareness and self-regulation, suggesting\nthat these are fundamental components of authentic leadership development. According to their\nmodel, a leader\u2019s personal history is the catalyst for authentic leadership development. This\nreflective perspective examines leader and follower roles, highlighting how authentic leaders are\npositive role models who consistently exhibit balanced processing, self-awareness, and\n14\ntransparency. Despite the lack of concrete examples, their comprehensive framework remains\ninvaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in\nauthentic leadership development. He critiques common approaches and suggests a new\nperspective based on dialogical philosophy, outlining a framework for dialogical pedagogy. By\nidentifying and discussing narrative identity processing and dramaturgical enactment, Berkovich\nthoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on\nempathy, mutuality, and open-mindedness underscores the intricate nature of authentic leadership\ndevelopment, making his contribution a significant expansion of Gardner et al. (2005) initial\nframework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy.\nQian et al. (2016) delve into the cognitive and emotive mechanisms influencing\nfeedback-seeking behavior within leader-follower relationships. They argue that authentic\nleadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and\ncost and their positive emotions. This focused view on feedback-seeking behaviors provides a\ndeeper understanding of how authentic leadership operates on a cognitive and emotional level.\nAlthough heavily theoretical, their study is supported by credible sources, reinforcing its claims.\nShifting the focus to group outcomes, Rego et al. (2013) examine how authentic\nleadership, directly and indirectly, predicts team potency through the mediating role of team\nvirtuousness and affective commitment. Their study, conducted at a Portuguese university with\n59 teams, provides quantifiable results that suggest authentic leadership is associated with more\n15\nvirtuous, committed, and potent teams. This research is particularly valuable as it examines the\neffects of authentic leadership on group outcomes, a rarity among studies that often focus on\nindividual follower outcomes. The study's findings are crucial for understanding the broader\nimpacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through\nteam-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a\nsupportive environment for learning from mistakes and heightening leader awareness of their\ncaring responsibilities, the study did not establish a strong correlation between simulations and\nauthentic leadership development. Despite this limitation, the detailed analysis of authentic\nleadership theory and methodology presented in the study offers valuable insights. These\ninsights, while specific to educational leaders, have broader implications for the development of\nauthentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic\nleadership on employee trust and engagement from a supervisor-employee perspective. Their\nstudy tested four hypotheses concerning employee and supervisor perceptions of authentic\nleadership and found that supervisor-perceived authentic leadership fully mediates employee\nwork engagement through employee trust. The use of statistical data to present quantifiable\nresults lends greater credibility to their conclusions,

offering a clear picture of the application of\nauthentic leadership and its probable outcomes. This reinforces the importance of trust in the\nauthentic leadership dynamic.\nIn contrast to other studies that primarily focused on outcomes, Mehmood et al. (2016)\nexamine the role of authentic leadership in employees\u2019 developmental goals and performance.\n16\nTheir study, conducted with supervisors and employees in the Pakistani Telecommunications\nsector, concludes that authentic leadership predicts followers' in-role and extra-role performance\nthrough learning goal orientation. As with other studies, the presentation of quantifiable results\nlends credibility to the authors' conclusions, although a deeper analysis of the research leading to\ntheir hypotheses would have been beneficial. This study emphasizes the developmental aspect of\nauthentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015)\nand Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book,\n"Authentic Leadership: Discover and Live Your Essential Mission," explores a seven-layer\nmodel for discovering one's purpose and achieving authenticity. He suggests that through layered\nself-reflection, individuals can find their authentic self and purpose and subsequently put\nauthentic leadership into effect. Although the book is mainly anecdotal and lacks academic\nrobustness, its straightforward language and engaging exercises make it accessible and\napplicable to a broad audience. This practical approach to authentic leadership complements the\ntheoretical frameworks discussed earlier.\nWulffers (2017), in "Authentic Leadership Effectiveness for Individuals and Teams: A\nCoaching Approach," examines the state of leadership today and the consequences of poor\nleadership. She presents authentic leadership theory as a critical method for achieving better\nquality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving\nauthenticity, heavily referencing previous literature on authentic leadership theory. Her practical\napproach and endorsements by industry leaders enhance the book's usefulness in authentic\n17\nleadership theory research. This combination of practical advice and theoretical grounding makes\nit a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the\nnursing profession. She argues that leader authenticity cannot be self-defined but lies in\nfollowers\u2019 perceptions. Through mentoring and confidence, one can create the perception of\nauthenticity as a leader. This practical perspective is relevant and helpful to authentic leadership\nresearch, offering context and application in a specific profession. Kerfoot\u2019s insights bridge the\ngap between theory and practice, demonstrating the applicability of authentic leadership in\nprofessional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering\nsocietal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede\nchange, highlighting its use in change management initiatives. Authentic leaders can leverage\nsocial media to strengthen these efforts while navigating the ethical challenges it presents,\nunderscoring its importance in contemporary leadership.\nBuilding on this, Harkins et al. (2023) explore the impact of emotionally charged content\non social media in engaging followers and promoting social causes. Their findings suggest that\npositive, emotionally charged images are more effective in garnering social media activity,\nemphasizing the power of social media in leadership and change. This aligns with the principles\nof authentic leadership, where emotional intelligence and engagement are crucial, demonstrating\nhow authenticity can

translate to success and popularity online.\n18\nKhaund et al. (2022) highlight the influence of social bots and their coordination during\nonline campaigns, emphasizing the need for ethical leadership in navigating digital landscapes.\nBots can significantly impact social media conversations and public opinion, presenting both\nopportunities and challenges for authentic leaders. The ethical considerations in using social\nmedia are critical for maintaining authenticity, which in turn affects a leader\u2019s reach and\naudience.\nNaeem (2020) examines the role of social networking applications in facilitating\norganizational change by enhancing knowledge sharing and participation. Social media enhances\nthe richness and reach of communication among stakeholders, providing a powerful tool for\nleaders to drive change. This practical application of social media complements the theoretical\nframeworks of authentic leadership, showing how authenticity can enhance a leader\u2019s influence\nand effectiveness.\nFinally, Omolloh (2020) presents a case study on using social media as a management\ntool in small businesses, highlighting its benefits in customer engagement and business\nawareness. This practical example underscores the versatility of social media in enhancing\nleadership practices across different contexts. The integration of social media in leadership\nstrategies can amplify the impact of authentic leadership, further illustrating how authenticity\ntranslates to success and popularity online.\nConclusion\nResearch suggests that authentic leadership and the strategic use of social media are\ncrucial for fostering effective leadership and societal change. Authentic leaders must leverage\nsocial media's potential while mitigating its risks to achieve positive organizational outcomes.\n19\nFuture research should explore the long-term effects of these dynamics on societal values and\nnorms.\n23\nReferences\nAllcott, H., & Gentzkow, M. Authentic Leadership Effectiveness for Individuals and Teams: A\nCoaching Approach. KR Publishing.\nhttp://search.ebscohost.com/login.aspx?direct=true&db=nlebk&AN=1595178&site=eh\nost-live\n----------\nThe authentic leader is only as good as their communication; authenticity is great, but it needs to be communicated. Social media is a great tool for authentic leaders because it allows them to inspire, influence, and lead others by communicating their authenticity to a wider audience. For example, Donald Trump, despite his abhorrent beliefs to some, is completely transparent about his behavior, which some people find authentic. They appreciate his lack of pretense, even if they don't agree with him. And when Donald Trump discovered Twitter, his audience grew. Social media can amplify perceived authenticity.\n----------\nAuthenticity and Communication: Studies emphasize that authentic leadership is highly dependent on effective communication. Leaders who are transparent and honest are perceived as more authentic, which in turn enhances their influence and leadership effectiveness. Social media offers a platform where leaders can communicate directly with their audience, thus amplifying their perceived authenticity (Northouse, 2019).\n\nSocial Media as a Tool for Authentic Leadership: The attachment discusses how social media enables leaders to reach a wider audience, influence public opinion, and mobilize followers. This is consistent with the idea that social media can amplify a leader's perceived authenticity, as it allows for continuous and direct communication, which fosters transparency and connection with the audience (Odii, 2020).\n\nImpact of Social Media on Leadership Reach: The attachment also provides examples of leaders like Donald Trump who used social media platforms, particularly Twitter, to expand their reach and influence. This supports the claim that social media can significantly amplify a leader's perceived authenticity, regardless of the leader's beliefs or actions (Heilweil & Ghaffary, 2021).\n\nChallenges and Ethical Considerations: While the benefits of social media in enhancing authentic leadership are highlighted, the attachment also discusses the risks, such as the spread of misinformation and the ethical challenges in maintaining authenticity online. This balanced view is crucial for understanding the dual impact of social media on leadership (Khaund et al., 2022).\n\nConclusion\nThe claims in your statement are well-supported by existing research, which indicates that social media is indeed a powerful tool for authentic leaders to communicate and expand their influence. The attachment further substantiates these points by providing empirical evidence and theoretical discussions on the intersection of social media and leadership.\n----------\n\nLets bring it all together and integrate the assertions, ideas, and statements in passages 2 and 3 and integrate them into passage 1 seemlessly and organically as though sythesized and created all together. Be sure to connect each study back to these central ideas stated/discussed in passages 2 and 3. If necessary, write a better prompt for yourself for this task and then share it with me. "]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"gizmo_id": "g-bo0FiWLY7", "request_id": "8b03eed9ae954c3e-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "84bafe55-c352-47d9-8b3a-5b4f2d397c36", "children":

Authenticity is indeed a valuable trait, but its impact is significantly heightened when effectively communicated. Social media has emerged as an indispensable tool for authentic leaders, enabling them to inspire, influence, and lead others by projecting their authenticity to a wider audience. This dynamic is well-documented in leadership studies, where effective communication is seen as the cornerstone of authentic leadership. As Northouse (2019) notes, leaders who are transparent and honest in their communication are perceived as more authentic, which in turn enhances their influence and leadership effectiveness.\n\nFor instance, Donald Trump, despite his controversial beliefs and behaviors, is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. This phenomenon aligns with research by Odii (2020), which discusses how social media allows leaders to reach a broader audience, influence public opinion, and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience, thereby reinforcing the leader's authenticity through transparency and direct engagement.\n\nMoreover, the impact of social media on leadership reach is profound. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially through his Twitter presence, a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their

communication.\n\nHowever, the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence.\n\nIn conclusion, the strategic use of social media is crucial for fostering authentic leadership. It provides leaders with the tools to communicate their authenticity effectively, thereby enhancing their influence and impact. As supported by the studies, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The case of Donald Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity.\n\n---\n\nThis passage integrates the original ideas with relevant research, creating a cohesive narrative that highlights the role of social media in authentic leadership."]}, "status": "finished_successfully","end_turn": true , "weight": 1.0, "metadata": {"citations": [], "content_references": [], "gizmo_id": "g-bo0FiWLY7", "finish_details": {"type": "stop", "stop_tokens": [200002]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4o", "default_model_slug": "gpt-4o", "pad": "AAAAAAAAAAAAAAAAAAAA", "parent_id": "656cb693-d628-41e6-b1a7-246cf50e3db1", "request_id": "8b03eed9ae954c3e-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "656cb693-d628-41e6-b1a7-246cf50e3db1", "children": ["aaa22c9f-decc-4dc3-90fa-375c0464073c"]}, "aaa22c9f-decc-4dc3-90fa-375c0464073c": {"id": "aaa22c9f-decc-4dc3-90fa-375c0464073c", "message": {"id": "aaa22c9f-decc-4dc3-90fa-375c0464073c", "author": {"role": "user", "name": null, "metadata": {}}, "create_time": 1723168458.270125, "update_time": null, "content": {"content_type": "text", "parts": ["CHAPTER 3: Literature Review\nThe author's fianc\u00e9 often laments that nowadays, society's memory spans only about five\nyears. He remarks that people often and easily forget what has come before, dooming all\nmistakes to be repeated. In contrast, fortunately, within academia, the effects and reach of social\nmedia, leadership, and authenticity have been studied and discussed at length. In this chapter, we\nwill explore the various facets of authentic leadership, its application, and its intersection with\nsocial media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty, where workers are demanding greater accountability and\nmorality from their leadership, the need for authentic leadership is undeniable. As Northouse\n(2019) articulates, people long for bona fide leadership that they can trust leaders who are honest\nand good. Although authentic leadership is still nascent in its philosophy, many of the greatest\nminds in academia, commerce, and science have studied, hypothesized, and postulated on its\nmethodology, application, and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by\nproposing a self-based model of the developmental processes for authentic leadership and\nfollowership. They emphasize the importance of self-awareness and self-regulation, suggesting\nthat these are fundamental components of authentic leadership development. According to their\nmodel, a leader\u2019s personal history is the catalyst for authentic leadership development. This\nreflective perspective examines leader and follower roles, highlighting how authentic leaders are\npositive role models who consistently exhibit balanced processing, self-awareness, and\n14\ntransparency. Despite the lack of concrete examples, their comprehensive framework remains\ninvaluable in examining authentic leadership theory.\nBerkovich

(2014) extends this understanding by incorporating dialogical pedagogy in\nauthentic leadership development. He critiques common approaches and suggests a new\nperspective based on dialogical philosophy, outlining a framework for dialogical pedagogy. By\nidentifying and discussing narrative identity processing and dramaturgical enactment, Berkovich\nthoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on\nempathy, mutuality, and open-mindedness underscores the intricate nature of authentic leadership\ndevelopment, making his contribution a significant expansion of Gardner et al. (2005) initial\nframework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy.\nQian et al. (2016) delve into the cognitive and emotive mechanisms influencing\nfeedback-seeking behavior within leader-follower relationships. They argue that authentic\nleadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and\ncost and their positive emotions. This focused view on feedback-seeking behaviors provides a\ndeeper understanding of how authentic leadership operates on a cognitive and emotional level.\nAlthough heavily theoretical, their study is supported by credible sources, reinforcing its claims.\nShifting the focus to group outcomes, Rego et al. (2013) examine how authentic\nleadership, directly and indirectly, predicts team potency through the mediating role of team\nvirtuousness and affective commitment. Their study, conducted at a Portuguese university with\n59 teams, provides quantifiable results that suggest authentic leadership is associated with more\n15\nvirtuous, committed, and potent teams. This research is particularly valuable as it examines the\neffects of authentic leadership on group outcomes, a rarity among studies that often focus on\nindividual follower outcomes. The study's findings are crucial for understanding the broader\nimpacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through\nteam-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a\nsupportive environment for learning from mistakes and heightening leader awareness of their\ncaring responsibilities, the study did not establish a strong correlation between simulations and\nauthentic leadership development. Despite this limitation, the detailed analysis of authentic\nleadership theory and methodology presented in the study offers valuable insights. These\ninsights, while specific to educational leaders, have broader implications for the development of\nauthentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic\nleadership on employee trust and engagement from a supervisor-employee perspective. Their\nstudy tested four hypotheses concerning employee and supervisor perceptions of authentic\nleadership and found that supervisor-perceived authentic leadership fully mediates employee\nwork engagement through employee trust. The use of statistical data to present quantifiable\nresults lends greater credibility to their conclusions, offering a clear picture of the application of\nauthentic leadership and its probable outcomes. This reinforces the importance of trust in the\nauthentic leadership dynamic.\nIn contrast to other studies that primarily focused on outcomes, Mehmood et al. (2016)\nexamine the role of authentic leadership in employees\u2019 developmental goals and performance.\n16\nTheir study, conducted with supervisors and employees in the Pakistani Telecommunications\nsector, concludes that authentic leadership predicts followers' in-role and extra-role performance\nthrough learning goal orientation. As with other studies, the presentation of quantifiable results\nlends credibility to the authors' conclusions, although a deeper analysis of the research leading

to\ntheir hypotheses would have been beneficial. This study emphasizes the developmental aspect of\nauthentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015)\nand Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book,\n"Authentic Leadership: Discover and Live Your Essential Mission," explores a seven-layer\nmodel for discovering one's purpose and achieving authenticity. He suggests that through layered\nself-reflection, individuals can find their authentic self and purpose and subsequently put\nauthentic leadership into effect. Although the book is mainly anecdotal and lacks academic\nrobustness, its straightforward language and engaging exercises make it accessible and\napplicable to a broad audience. This practical approach to authentic leadership complements the\ntheoretical frameworks discussed earlier.\nWulffers (2017), in "Authentic Leadership Effectiveness for Individuals and Teams: A\nCoaching Approach," examines the state of leadership today and the consequences of poor\nleadership. She presents authentic leadership theory as a critical method for achieving better\nquality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving\nauthenticity, heavily referencing previous literature on authentic leadership theory. Her practical\napproach and endorsements by industry leaders enhance the book's usefulness in authentic\n17\nleadership theory research. This combination of practical advice and theoretical grounding makes\nit a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the\nnursing profession. She argues that leader authenticity cannot be self-defined but lies in\nfollowers\u2019 perceptions. Through mentoring and confidence, one can create the perception of\nauthenticity as a leader. This practical perspective is relevant and helpful to authentic leadership\nresearch, offering context and application in a specific profession. Kerfoot\u2019s insights bridge the\ngap between theory and practice, demonstrating the applicability of authentic leadership in\nprofessional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering\nsocietal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede\nchange, highlighting its use in change management initiatives. Authentic leaders can leverage\nsocial media to strengthen these efforts while navigating the ethical challenges it presents,\nunderscoring its importance in contemporary leadership.\nBuilding on this, Harkins et al. (2023) explore the impact of emotionally charged content\non social media in engaging followers and promoting social causes. Their findings suggest that\npositive, emotionally charged images are more effective in garnering social media activity,\nemphasizing the power of social media in leadership and change. This aligns with the principles\nof authentic leadership, where emotional intelligence and engagement are crucial, demonstrating\nhow authenticity can translate to success and popularity online.\n18\nKhaund et al. (2022) highlight the influence of social bots and their coordination during\nonline campaigns, emphasizing the need for ethical leadership in navigating digital landscapes.\nBots can significantly impact social media conversations and public opinion, presenting both\nopportunities and challenges for authentic leaders. The ethical considerations in using social\nmedia are critical for maintaining authenticity, which in turn affects a leader\u2019s reach and\naudience.\nNaeem (2020) examines the role of social networking applications in facilitating\norganizational change by enhancing knowledge sharing and participation. Social media enhances\nthe richness and reach of

communication among stakeholders, providing a powerful tool for\nleaders to drive change. This practical application of social media complements the theoretical\nframeworks of authentic leadership, showing how authenticity can enhance a leader\u2019s influence\nand effectiveness.\nFinally, Omolloh (2020) presents a case study on using social media as a management\ntool in small businesses, highlighting its benefits in customer engagement and business\nawareness. This practical example underscores the versatility of social media in enhancing\nleadership practices across different contexts. The integration of social media in leadership\nstrategies can amplify the impact of authentic leadership, further illustrating how authenticity\ntranslates to success and popularity online.\nThe authentic leader is only as effective as their communication. Authenticity is indeed a valuable trait, but its impact is significantly heightened when effectively communicated. Social media has emerged as an indispensable tool for authentic leaders, enabling them to inspire, influence, and lead others by projecting their authenticity to a wider audience. This dynamic is well-documented in leadership studies, where effective communication is seen as the cornerstone of authentic leadership. As Northouse (2019) notes, leaders who are transparent and honest in their communication are perceived as more authentic, which in turn enhances their influence and leadership effectiveness.\n\nFor instance, Donald Trump, despite his controversial beliefs and behaviors, is often regarded as authentic by his followers due to his direct and unfiltered communication style. His use of Twitter exemplifies how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. This phenomenon aligns with research by Odii (2020), which discusses how social media allows leaders to reach a broader audience, influence public opinion, and mobilize followers. Social media\u2019s role in leadership extends beyond mere communication; it fosters a continuous connection between leaders and their audience, thereby reinforcing the leader's authenticity through transparency and direct engagement.\n\nMoreover, the impact of social media on leadership reach is profound. Heilweil and Ghaffary (2021) illustrate how Trump\u2019s audience and influence grew substantially through his Twitter presence, a clear demonstration of how social media can amplify a leader\u2019s reach. This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their communication.\n\nHowever, the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence.\n\n\n\nConclusion\nResearch suggests that authentic leadership and strategic use of social media are crucial for fostering effective leadership and societal change. Authentic leaders must harness the potential of social media while managing its risks to achieve positive organizational outcomes. The strategic use of social media is essential for fostering authentic leadership as it provides leaders with tools to effectively communicate their authenticity, enhancing their influence and impact. As supported by studies, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The case of Donald Trump\u2019s use of Twitter illustrates the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of

these dynamics on societal values and norms.\nnorms.\n\n\nis this good, does it flow or are there some little tweaks you might make to sinthesize everything together better and ensure that flows neatly and doesn't seem choopy or that certain parts were and after thought, even tho they were"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"gizmo_id": "g-bo0FiWLY7", "request_id": "8b041e0c6dd4bb23-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "f27c1d8f-610c-48a1-9d8b-5eb878d114db", "children": ["be05d42d-ce2f-4cfb-86be-1b47ba6faaaa"]}, "be05d42d-ce2f-4cfb-86be-1b47ba6faaaa": {"id": "be05d42d-ce2f-4cfb-86be-1b47ba6faaaa", "message": {"id": "be05d42d-ce2f-4cfb-86be-1b47ba6faaaa", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1723168480.067575, "update_time": null, "content": {"content_type": "text", "parts": ["The passage you've provided is well-integrated and cohesive overall. However, there are a few minor tweaks that could enhance the flow and ensure that the ideas are synthesized more smoothly. Here\u2019s a refined version with subtle adjustments for better continuity:\n\n---\n\n### Integrated Passage\n\nIn today's rapidly changing world, where societal memory often seems fleeting, the need for authentic leadership\u2014grounded in transparency, accountability, and effective communication\u2014has never been more pressing. As Northouse (2019) emphasizes, people yearn for leaders who are honest and good, who can be trusted to guide them through uncertainty. This chapter delves into the various facets of authentic leadership, its application, and its intersection with social media as a transformative tool for leadership and change.\n\n**Understanding Authentic Leadership**\n\nThe concept of authentic leadership, while still evolving, has been extensively explored in academic circles. Gardner et al. (2005) laid the groundwork by proposing a self-based model that underscores the importance of self-awareness and self-regulation in authentic leadership development. They argue that a leader's personal history serves as the catalyst for developing authenticity, with authentic leaders consistently exhibiting balanced processing, self-awareness, and transparency.\n\nBuilding on this, Berkovich (2014) expanded the framework by introducing dialogical pedagogy, emphasizing the role of empathy, mutuality, and open-mindedness in authentic leadership development. His contribution further enriches the understanding of how authentic leaders can effectively engage with followers, enhancing both leadership effectiveness and ethical behavior.\n\n**Application and Efficacy of Authentic Leadership**\n\nPractical applications of authentic leadership have been examined through various lenses. For instance, Qian et al. (2016) explored how authentic leadership influences feedback-seeking behavior within leader-follower relationships, emphasizing the cognitive and emotive mechanisms at play. Similarly, Rego et al. (2013) demonstrated how authentic leadership positively impacts team potency, mediated by team virtuousness and affective commitment.\n\nFurther, studies like those by Shapira-Lishchinsky (2014) and Hsieh and Wang (2015) highlight the broader implications of authentic leadership, particularly in educational settings and employee engagement, respectively. These findings underscore the importance of trust and ethical behavior in fostering strong, committed teams and organizations.\n\n**Authentic Leadership in Practice**\n\nBeyond theoretical exploration, the practical application of authentic leadership has been documented in various contexts. Blekkingh (2015) and Wulffers (2017) provide accessible guides to achieving authenticity, emphasizing the importance of self-reflection and practical application. Kerfoot (2006), in particular, bridges the gap between theory and

practice by illustrating how authentic leadership can be applied in the nursing profession, where the perception of authenticity is crucial.\n\n**The Role of Social Media in Enhancing Authentic Leadership**\n\nSocial media has emerged as a powerful tool in enhancing authentic leadership, enabling leaders to communicate their authenticity to a broader audience. Odii (2020) discusses the dual role of social media in both facilitating and impeding change, emphasizing its potential in change management initiatives. This aligns with the principles of authentic leadership, where transparency and direct engagement are paramount.\n\nHarkins et al. (2023) further highlight how emotionally charged content on social media can engage followers and promote social causes, demonstrating how authenticity can translate to success and popularity online. However, the ethical challenges of maintaining authenticity in a digital landscape, as discussed by Khaund et al. (2022), cannot be overlooked. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging social media\u2019s reach.\n\n**Conclusion**\n\nThe authentic leader is only as effective as their communication. Authenticity is indeed a valuable trait, but its impact is significantly heightened when effectively communicated. Social media has proven indispensable for authentic leaders, enabling them to inspire, influence, and lead others by projecting their authenticity to a wider audience. The case of Donald Trump, for example, illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages.\n\nResearch suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, enhancing their influence and impact. The case of Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\n\n---\n\n### Key Adjustments Made:\n\n1. **Transitions and Continuity**: Added connecting phrases and sentences to ensure smooth transitions between different studies and concepts. This helps to create a more unified narrative.\n\n2. **Reduction of Redundancy**: Some repeated phrases were streamlined or omitted to avoid redundancy and keep the focus sharp.\n\n3. **Conclusion Enhancement**: The conclusion was slightly expanded to tie all the key points together, reiterating the importance of social media in enhancing authentic leadership while acknowledging the challenges it presents.\n\nThese tweaks should make the passage feel more cohesive and ensure that it reads as a well-synthesized, unified piece."]}, "status": "finished_successfully","end_turn": true

Here\u2019s a revised version that follows your preferred three-sentence (or more) paragraph format:\n\n---\n\n### Integrated Passage\n\nIn today's rapidly changing world, where societal memory often seems fleeting, the need for authentic leadership\u2014grounded in transparency, accountability, and effective communication\u2014has never been more pressing. As Northouse (2019) emphasizes, people yearn for leaders who are honest and good, who can be trusted to guide them through uncertainty. This chapter delves into the various facets of authentic leadership, its application, and its intersection with social media as a transformative tool for leadership and change.\n\n**Understanding Authentic Leadership**\n\nThe concept of authentic leadership, while still evolving, has been extensively explored in academic circles. Gardner et al. (2005) laid the groundwork by proposing a self-based model that underscores the importance of self-awareness and self-regulation in authentic leadership development. They argue that a leader's personal history serves as the catalyst for developing authenticity, with authentic leaders consistently exhibiting balanced processing, self-awareness, and transparency, which are essential traits for fostering trust and effectiveness.\n\nBuilding on this foundation, Berkovich (2014) expanded the framework by introducing dialogical pedagogy, which emphasizes the role of empathy, mutuality, and open-mindedness in the development of authentic leadership. His contribution further enriches the understanding of how authentic leaders can effectively engage with followers, thereby enhancing both leadership effectiveness and ethical behavior. These elements of dialogical pedagogy are critical in shaping leaders who can navigate the complexities of modern organizational environments.\n\n**Application and Efficacy of Authentic Leadership**\n\nPractical applications of authentic leadership have been examined through various lenses, offering insights into its efficacy. For instance, Qian et al. (2016) explored how authentic leadership influences feedback-seeking behavior within leader-follower relationships, emphasizing the cognitive and emotive mechanisms that drive these interactions. This study sheds light on the deeper psychological processes that underpin authentic leadership, offering a nuanced understanding of how leaders can foster a culture of openness and continuous improvement.\n\nSimilarly, Rego et al. (2013) demonstrated how authentic leadership positively impacts team potency, mediated by team virtuousness and affective commitment. Their research, conducted at a Portuguese university, provides quantifiable evidence that authentic leadership contributes to stronger, more cohesive teams, highlighting its broader organizational benefits. This focus on team outcomes rather than just individual follower outcomes is particularly valuable for understanding the collective impact of authentic leadership within organizations.\n\nFurther, studies like those by Shapira-Lishchinsky (2014) and Hsieh and Wang (2015) highlight the broader implications of authentic leadership,

particularly in educational settings and employee engagement, respectively. These findings underscore the importance of trust and ethical behavior in fostering strong, committed teams and organizations. They also demonstrate that the principles of authentic leadership are applicable across different sectors, from education to corporate environments.\n\n**Authentic Leadership in Practice**\n\nBeyond theoretical exploration, the practical application of authentic leadership has been documented in various contexts, offering real-world examples of its impact. Blekkingh (2015) and Wulffers (2017) provide accessible guides to achieving authenticity, emphasizing the importance of self-reflection and the practical steps necessary to embody authentic leadership. Their works offer a combination of theoretical grounding and actionable strategies, making the concept of authentic leadership more tangible and applicable for practitioners.\n\nKerfoot (2006), in particular, bridges the gap between theory and practice by illustrating how authentic leadership can be applied in the nursing profession, where the perception of authenticity is crucial. Her insights into mentoring and confidence-building provide valuable lessons for leaders in any field, emphasizing that authenticity must be perceived by followers to be effective. This perspective reinforces the idea that leadership is not just about self-perception but also about how others perceive the leader\u2019s authenticity.\n\n**The Role of Social Media in Enhancing Authentic Leadership**\n\nSocial media has emerged as a powerful tool in enhancing authentic leadership, enabling leaders to communicate their authenticity to a broader audience. Odii (2020) discusses the dual role of social media in both facilitating and impeding change, highlighting its potential in change management initiatives. This duality reflects the broader challenges and opportunities that social media presents to leaders, where the same platform that amplifies messages can also complicate the maintenance of authenticity.\n\nBuilding on Odii's insights, Harkins et al. (2023) explore how emotionally charged content on social media can engage followers and promote social causes, demonstrating how authenticity can translate to success and popularity online. Their findings suggest that the emotional resonance of content is a key factor in its effectiveness, aligning with the principles of authentic leadership, where emotional intelligence and engagement are crucial. This highlights the importance of not just the message but also how it is delivered in resonating with an audience.\n\nHowever, the ethical challenges of maintaining authenticity in a digital landscape, as discussed by Khaund et al. (2022), cannot be overlooked. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging social media\u2019s reach. This delicate balance between maintaining ethical standards and engaging effectively with a broad audience is critical for sustaining long-term trust and influence.\n\n**Conclusion**\n\nThe authentic leader is only as effective as their communication, as the impact of authenticity is significantly heightened when it is effectively communicated. Social media has proven indispensable for authentic leaders, enabling them to inspire, influence, and lead others by projecting their authenticity to a wider audience. This dynamic is well-documented in leadership studies, where effective communication is seen as the cornerstone of authentic leadership. \n\nThe case of Donald Trump, for example, illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for fostering

authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, thereby enhancing their influence and impact. The case of Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\n\n---\n\nThis revision ensures that each paragraph contains a clear introduction, main idea, and supporting or closing sentence, adhering to your preference for paragraphs with more substance."]}, "status": "finished_successfully","end_turn": true

This expansion of influence is not just about the number of followers but also about the depth of engagement, where followers feel a personal connection with the leader due to the perceived authenticity of their communication. However, the use of social media in leadership is not without its challenges. As Khaund et al. (2022) highlight, the ethical considerations of maintaining authenticity online are significant, especially in an environment rife with misinformation. Leaders must navigate these challenges carefully to preserve their authenticity while leveraging the power of social media to expand their influence responsibly.\n\n**Conclusion**\n\nThe authentic leader is only as effective as their communication, as the impact of authenticity is significantly heightened when it is effectively communicated. Social media has proven indispensable for authentic leaders, enabling them to inspire, influence, and lead others by projecting their authenticity to a wider audience. This dynamic is well-documented in leadership studies, where effective communication is seen as the cornerstone of authentic leadership.\n\nThe case of Donald Trump illustrates how social media can amplify a leader's perceived authenticity, regardless of the content of their messages. Research suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. As studies indicate, social media serves as both an amplifier of perceived authenticity and a platform that requires careful ethical navigation. The strategic use of social media is essential for

fostering authentic leadership, as it provides leaders with the tools to effectively communicate their authenticity, thereby enhancing their influence and impact. Trump\u2019s use of Twitter underscores the dual nature of social media in leadership\u2014offering both opportunities for greater connection and challenges in maintaining authenticity. Future research should explore the long-term effects of these dynamics on societal values and norms.\n\n---\n\nThis revision maintains the structured, multi-sentence paragraph format while fully integrating the detailed discussion of Donald Trump\u2019s use of social media as an example of how social media can amplify perceived authenticity in leadership. Each section flows logically, supporting the central thesis with clear, well-connected arguments."]}, "status": "finished_successfully","end_turn": true

Our plan is to get me a right to work in italy and then I with all my education (2 master degrees, 1 bachelor) plus over 10 years professionnal experience will then find a lucrative job and turn our situationn around. At the momment we are in the process and for fun I was looking at pool homes. He seemed offended and saaid i didn't care about his situationn and that "he wished for one momentI would have one of the thoughts in his head instead of thinking about this [my dream home]. What is going on? Why is he so offended? Why am not aloud to dream? "]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"request_id": "8b024932cea7522e-MXP", "message_source": null, "timestamp_": "absolute", "message_type": null}, "recipient": "all", "channel": null}, "parent": "4d725b99-3eec-4a92-830f-893516752cc0", "children": ["6a735ff7-a920-4dfa-b9d2-9430459c7cb1"]}, "6a735ff7-a920-4dfa-b9d2-9430459c7cb1": {"id": "6a735ff7-a920-4dfa-b9d2-9430459c7cb1", "message": {"id": "6a735ff7-a920-4dfa-b9d2-9430459c7cb1", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1723149276.011663, "update_time": null, "content": {"content_type": "text", "parts": ["It sounds like you're navigating a very challenging and stressful period in your life. The financial strain you and your husband are experiencing can intensify emotions and put significant pressure on communication and shared understanding within a relationship.\n\nYour husband's reaction to you looking at dream homes, from a psychoanalytic perspective, could be understood as a manifestation of his current anxieties and insecurities. Financial strain, such as the tax lien reducing his salary, might make him feel like he's failing in his role as a provider, which can be a profound source of stress and diminished self-esteem. His comment about wishing you could have "one of the thoughts in his head" suggests a desire for empathy and solidarity in facing the financial challenges together.\n\nWhen you explore ideas or plans that seem out of reach under current circumstances, like looking at pool homes, he might interpret this action as a disconnect from the immediate realities you both are facing. Even though dreaming about a better future is not only natural but healthy, he may view it as inattentive or dismissive of the pressing concerns that are currently overwhelming him.\n\nIt's important to recognize that dreaming and planning for a better future is a valid and important coping mechanism. It helps maintain hope and can be a motivational force. However, timing and context matter greatly in how such actions are perceived. In moments of acute stress, individuals may need more immediate emotional support and signs of shared concern before they can appreciate or engage in future-oriented thinking.\n\nTo address the situation:\n1. **Empathic Communication**: Try to discuss openly how you both feel about the situation. Express your understanding of his stress and reassure him of your

commitment to tackling the current challenges together.\n2. **Balancing Dreams and Realities**: Share your dreams and visions for the future, but also engage actively with the present difficulties. This can help both of you feel more aligned and supported.\n3. **Counseling or Therapy**: Consider seeking support from a therapist or counselor. They can offer guidance in improving communication, managing stress, and aligning on mutual goals and expectations.\n\nRemember, it's completely valid for you to dream and aspire, especially as a way to cope and look forward to better times. However, in partnership, it's also crucial to stay attuned to each other's emotional states and needs, especially during tough times."]}, "status": "finished_successfully","end_turn": true

He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across

diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive

framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through

genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021).\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies.\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact.\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 3: Literature Review\n\nThe author's fianc\u00e9 often laments that nowadays society's memory spans only about five years. He remarks that people often and easily forget what has come before dooming all mistakes to be repeated. In contrast fortunately within academia the effects and reach of social media leadership and authenticity have been studied and discussed at length. In this chapter we will explore the various facets of authentic leadership its application and its intersection with social media as a tool for leadership and change.\nUnderstanding Authentic Leadership\nIn a world rife with uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. As Northouse (2019) articulates people long for bona fide leadership that they can trust leaders who are honest and good. Although authentic leadership is still nascent in its philosophy many of the greatest minds in academia commerce and science have studied hypothesized and postulated on its methodology application and efficacy.\nGardner et al. (2005) provided a foundational understanding of authentic leadership by proposing a self-based model of the

developmental processes for authentic leadership and followership. They emphasize the importance of self-awareness and self-regulation suggesting that these are fundamental components of authentic leadership development. According to their model a leader\u2019s personal history is the catalyst for authentic leadership development. This reflective perspective examines leader and follower roles highlighting how authentic leaders are positive role models who consistently exhibit balanced processing self-awareness and transparency. Despite the lack of concrete examples their comprehensive framework remains invaluable in examining authentic leadership theory.\nBerkovich (2014) extends this understanding by incorporating dialogical pedagogy in authentic leadership development. He critiques common approaches and suggests a new perspective based on dialogical philosophy outlining a framework for dialogical pedagogy. By identifying and discussing narrative identity processing and dramaturgical enactment Berkovich thoroughly examines the foundations and mechanics of dialogical pedagogy. His discourse on empathy mutuality and open-mindedness underscores the intricate nature of authentic leadership development making his contribution a significant expansion of Gardner et al. (2005) initial framework.\nApplication and Efficacy of Authentic Leadership\nSeveral studies have focused on authentic leadership's practical applications and efficacy. Qian et al. (2016) delve into the cognitive and emotive mechanisms influencing feedback-seeking behavior within leader-follower relationships. They argue that authentic leadership influences feedback-seeking indirectly through employees\u2019 perceptions of value and cost and their positive emotions. This focused view on feedback-seeking behaviors provides a deeper understanding of how authentic leadership operates on a cognitive and emotional level. Although heavily theoretical their study is supported by credible sources reinforcing its claims.\nShifting the focus to group outcomes Rego et al. (2013) examine how authentic leadership directly and indirectly predicts team potency through the mediating role of team virtuousness and affective commitment. Their study conducted at a Portuguese university with 59 teams provides quantifiable results that suggest authentic leadership is associated with more virtuous committed and potent teams. This research is particularly valuable as it examines the effects of authentic leadership on group outcomes a rarity among studies that often focus on individual follower outcomes. The study's findings are crucial for understanding the broader impacts of authentic leadership within teams and organizations.\nShapira-Lishchinsky (2014) explores the development of authentic leadership through team-based simulations (TBSs) of ethical cases in the educational field. While TBSs created a supportive environment for learning from mistakes and heightening leader awareness of their caring responsibilities the study did not establish a strong correlation between simulations and authentic leadership development. Despite this limitation the detailed analysis of authentic leadership theory and methodology presented in the study offers valuable insights. These insights while specific to educational leaders have broader implications for the development of authentic leadership in various contexts.\nHsieh and Wang (2015) provide compelling evidence of the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Their study tested four hypotheses concerning employee and supervisor perceptions of authentic leadership and found that supervisor-perceived authentic leadership fully mediates employee work engagement through employee trust. The use of statistical data to present quantifiable results lends greater credibility to their conclusions offering a clear picture of the application of authentic leadership and its probable outcomes. This reinforces the importance of trust in the authentic leadership dynamic.\nIn

contrast to other studies that primarily focused on outcomes Mehmood et al. (2016) examine the role of authentic leadership in employees\u2019 developmental goals and performance. Their study conducted with supervisors and employees in the Pakistani Telecommunications sector concludes that authentic leadership predicts followers' in-role and extra-role performance through learning goal orientation. As with other studies the presentation of quantifiable results lends credibility to the authors' conclusions although a deeper analysis of the research leading to their hypotheses would have been beneficial. This study emphasizes the developmental aspect of authentic leadership and its impact on employee performance.\nAuthentic Leadership in Practice\nThe exploration of authentic leadership is not confined to academia. Blekkingh (2015) and Wulffers (2017) offer practical guides to achieving authenticity. Blekkingh\u2019s book "Authentic Leadership: Discover and Live Your Essential Mission" explores a seven-layer model for discovering one's purpose and achieving authenticity. He suggests that through layered self-reflection individuals can find their authentic self and purpose and subsequently put authentic leadership into effect. Although the book is mainly anecdotal and lacks academic robustness its straightforward language and engaging exercises make it accessible and applicable to a broad audience. This practical approach to authentic leadership complements the theoretical frameworks discussed earlier.\nWulffers (2017) in "Authentic Leadership Effectiveness for Individuals and Teams: A Coaching Approach" examines the state of leadership today and the consequences of poor leadership. She presents authentic leadership theory as a critical method for achieving better quality leadership. Wulffers\u2019 book is an extended case study and detailed manual on achieving authenticity heavily referencing previous literature on authentic leadership theory. Her practical approach and endorsements by industry leaders enhance the book's usefulness in authentic leadership theory research. This combination of practical advice and theoretical grounding makes it a valuable resource.\nKerfoot (2006) provides a practical application of authentic leadership theory in the nursing profession. She argues that leader authenticity cannot be self-defined but lies in followers\u2019 perceptions. Through mentoring and confidence one can create the perception of authenticity as a leader. This practical perspective is relevant and helpful to authentic leadership research offering context and application in a specific profession. Kerfoot\u2019s insights bridge the gap between theory and practice demonstrating the applicability of authentic leadership in professional settings.\nThe Role of Social Media in Enhancing Authentic Leadership\nSocial media plays a significant role in enhancing authentic leadership and fostering societal change. Odii (2020) discusses social media\u2019s potential to both facilitate and impede change highlighting its use in change management initiatives. Authentic leaders can leverage social media to strengthen these efforts while navigating the ethical challenges it presents underscoring its importance in contemporary leadership.\nBuilding on this Harkins et al. (2023) explore the impact of emotionally charged content on social media in engaging followers and promoting social causes. Their findings suggest that positive emotionally charged images are more effective in garnering social media activity emphasizing the power of social media in leadership and change. This aligns with the principles of authentic leadership where emotional intelligence and engagement are crucial demonstrating how authenticity can translate to success and popularity online.\nKhaund et al. (2022) highlight the influence of social bots and their coordination during online campaigns emphasizing the need for ethical leadership in navigating digital landscapes. Bots can significantly impact

social media conversations and public opinion presenting both opportunities and challenges for authentic leaders. The ethical considerations in using social media are critical for maintaining authenticity which in turn affects a leader\u2019s reach and audience.\nNaeem (2020) examines the role of social networking applications in facilitating organizational change by enhancing knowledge sharing and participation. Social media enhances the richness and reach of communication among stakeholders providing a powerful tool for leaders to drive change. This practical application of social media complements the theoretical frameworks of authentic leadership showing how authenticity can enhance a leader\u2019s influence and effectiveness.\nFinally Omolloh (2020) presents a case study on using social media as a management tool in small businesses highlighting its benefits in customer engagement and business awareness. This practical example underscores the versatility of social media in enhancing leadership practices across different contexts. The integration of social media in leadership strategies can amplify the impact of authentic leadership further illustrating how authenticity translates to success and popularity online.\nConclusion\nResearch suggests that authentic leadership and the strategic use of social media are crucial for fostering effective leadership and societal change. Authentic leaders must leverage social media's potential while mitigating its risks to achieve positive organizational outcomes. Future research should explore the long-term effects of these dynamics on societal values and norms.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research in the literature review. With these chapters and any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.]\n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the

research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social Media and Fake News in the 2016 Election. "content": {"content_type": "text", "parts": ["Your capstone project exhibits a well-structured and researched foundation. Here's a breakdown of the components:\n\n### Cohesion of Idea\nThe central theme, "Social Media's Role in Contemporary Leadership," is clearly articulated and consistently explored across different chapters. The project presents a cohesive argument linking social media influence with authentic leadership, applying theoretical frameworks to current phenomena. This focus remains evident through various discussions, ranging from political influences to social movements and ethical considerations.\n\n### Literature Review\nThe literature review in Chapter 3 is robust, detailing a variety of sources and perspectives on authentic leadership. You have effectively integrated theoretical insights with practical examples, which helps ground the discussion in real-world applications. References to foundational studies and recent research ensure that your review is comprehensive and up-to-date. The literature supports the thesis and provides a solid theoretical backdrop for understanding the impact of social media within the leadership context.\n\n### Graduate-Level Writing\nYour writing is generally clear, and you've utilized academic conventions well, such as proper citation and formal tone. However, consider the following for improvement:\n\n- **Consistency in Formatting**: Ensure consistent use of formatting styles throughout the document. This includes headings, subheadings, and text alignment, which can occasionally vary and disrupt the reading flow.\n \n- **Clarity and Conciseness**: Some sections could be more concise. Aim to streamline your points to enhance clarity and reduce redundancy, particularly in summarizing research studies.\n\n- **Proofreading**: There are minor typographical and grammatical errors scattered throughout the text. A thorough proofreading session would refine the professionalism of your work, which is crucial for graduate-level writing.\n\n### Recommendations\n1. **Enhance Structure**: Revisit the organization of some sections to ensure each part builds logically on the previous one, especially in the literature review where many ideas and studies are introduced.\n \n2. **Critical Analysis**: While you've described various studies, deepen your critical analysis of these sources. Discuss limitations, contradictions, or gaps in the existing research to strengthen your arguments and demonstrate analytical thinking.\n \n3. **Integration of Examples**: Continue to integrate real-world examples that illustrate your points, as these are compelling and help contextualize the theoretical content. \n\nOverall, your project is on a solid path. With some refinement in writing style and deeper critical engagement with the material, it will undoubtedly meet the graduate-level standards expected at your institution."]}, "status": "finished_successfully","end_turn": true, "weight": 1.0, "metadata": {"citations": [], "gizmo_id": null, "finish_details": {"type": "stop", "stop_tokens": [100260]}, "is_complete": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AAAAAAAAAAAAAAAAAAAA", "parent_id": "844382ef-7064-4de9-a79c-837e1fd0b4bd", "request_id": "8ae7c03938c25a19-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "844382ef-7064-4de9-a79c-837e1fd0b4bd", "children": []}}, "moderation_results": [], "current_node": "cb0968a7-efaa-4959-9721-a03b164e305f", "plugin_ids": null, "conversation_id": "52928b3e-bdde-4931-84b0-d035ef3e1179", "conversation_template_id": null, "gizmo_id": null, "is_archived": false, "safe_urls": ["https://x.com/JoeBiden/status/1815080881981190320", "https://www.pewresearch.org/internet/2021/04/07/social-media-use-in-2021/", "https://journals.sagepub.com/doi/10.1177/1350506818765318", "https://doi.org/10.1257/jep.31.2.211", "https://www.youtube.com/watch?v=0cN-JX6HP7c",

He does not trust easily and always looks beyond what people say to determine their meaning. Consequently he is very hard to manipulate and very hard to influence and as such he is very hard to lead; he prefers to be in charge. Therefore he is skilled in convincing people. He knows how to influence others and lead people because as Northouse (2019) asserts leadership is an influence process.\nUnlike the author\u2019s fianc\u00e9 a significant portion of the population does not delve deeply into the authenticity of the information they receive; 18% of Americans report that social media has a significant impact on their voting decisions

and 55% consider it their primary news source according to a 2019 Pew Research study. This widespread influence of social media raises a compelling question about the nature of leadership in the digital era. Building on Northouse's definition I intend to argue that the influence exerted by social media can be seen as a form of authentic leadership. This form of leadership practiced by social media influencers aligns closely with authentic leadership theory emphasizing transparency ethics and a focus on the communal good. Through their pervasive reach and often personal engagement with followers these influencers craft a modern leadership narrative that significantly shapes public opinions and societal values.\nSocial Significance\nThe influence of social media is profound and ubiquitous reaching across all sectors of society. According to the Pew Research Center approximately 72% of the U.S. public uses some type of social media with varying impacts on social political and community engagement (Pew Research Center 2021). The breadth of this influence spans across diverse demographic groups making nearly everyone a potential recipient of communicated messages whether accurate or misleading.\nThe potential benefits of this influence include increased awareness and mobilization for social causes as seen with movements like #MeToo and #BlackLivesMatter which have propelled significant societal shifts and brought critical issues to the forefront of global awareness. Social media influencers have played crucial roles in these movements utilizing their platforms to amplify voices and call for action. For instance prominent figures like Alyssa Milano and Tarana Burke have used their influence to promote the #MeToo movement leading to widespread discussions about sexual harassment and assault (Mendes et al. 2018).\nHowever the risks involve the spread of misinformation and manipulating public opinion which can polarize communities and disrupt democratic processes. The cost of such influence can be seen in the widespread controversies surrounding elections and public policy debates where influencers have swayed public sentiment through both genuine and questionable means. For example during the 2016 U.S. presidential election false information disseminated by social media influencers and bots was found to have significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017).\nThe individuals most impacted by this phenomenon include young adults who are the most active on platforms like Instagram and TikTok and are particularly susceptible to influencer marketing and political campaigns (Auxier & Anderson 2021). This demographic's high engagement levels highlight the critical need to understand the mechanisms of influence and leadership within these digital platforms. Research indicates that young people trust influencers more than traditional celebrities or politicians making them a key target for marketing and political messaging (Djafarova & Rushworth 2017).\nIn addition to social movements and political implications the economic impact of social media influence is significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging the reach and authenticity of influencers to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is set to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021). This economic dimension underscores the dual nature of influencer power: while it offers opportunities for authentic brand engagement it also raises questions about ethics and transparency in advertising.\nThe social significance of social media influence is further highlighted by its role in mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For example Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and

appearance comparison tendencies. These findings suggest that while influencers can promote positive messages they also have the potential to contribute to harmful social norms.\nConclusion\nThis research project is situated at the intersection of leadership theory and digital media studies. It aims to critically analyze the role of social media influencers as contemporary leaders who not only entertain but also significantly influence societal values and norms. By aligning the characteristics of social media leadership with authentic leadership theories this study will evaluate the authenticity and ethical considerations of influencers' practices. The findings are expected to provide insights into how digital platforms can be harnessed for responsible and effective leadership promoting positive change while mitigating risks associated with digital influence. This foundational exploration sets the stage for a detailed literature review in Chapter 2 where theories of leadership and empirical studies on digital influence will be synthesized to build a comprehensive framework for understanding leadership in the digital age.\n\n\nCHAPTER 2: Identification of Phenomenon\n\nThe author's fianc\u00e9 does not consider social media such as TikTok and Twitter as reliable sources of information. He feels that government leaders and politicians undermine the seriousness and importance of their positions when they use lighthearted TikTok videos to promote their message or agenda. Additionally he believes that such displays reflect the sensationalism and showmanship of American politics. In contrast to the author's fiance's opinion a Pew Research study in 2023 found that over 50% of adults surveyed reported getting their news from social media at least sometimes (Social Media and News Fact Sheet 2023).\nOn July 21st 2024 President Joe Biden announced his decision not to seek re-election in the fall. This historic announcement marking the first time in over fifty years that a sitting president refused their party's nomination was made using the platform now known as X (Mason et al. 2024). The use of social media highlights its efficiency in disseminating information and providing individuals with the opportunity to engage in the public sphere gain followers and exert influence on an unprecedented scale.\nSocial media has emerged as a formidable force influencing public opinions and attitudes in the contemporary digital era. This phenomenon where social media shapes and reflects public opinions is particularly significant when examined through authentic leadership theory. Authentic leadership which emphasizes transparency ethics and a communal focus aligns closely with the activities of social media influencers who wield substantial sway over their followers.\nThe role of social media in influencing public opinion is both profound and pervasive. Approximately 72% of the U.S. public uses social media with platforms such as Facebook and YouTube leading the way (Auxier & Anderson 2021). This extensive reach ensures that nearly everyone is exposed to the opinions and ideas circulated on these platforms whether accurate or misleading. The impact of social media is evident in various sectors from political engagement to social movements economic trends and mental health.\nIn order to investigate this phenomenon data was collected through a comprehensive literature review and qualitative analysis of social media interactions. The sources encompassed peer-reviewed articles books on leadership theories and empirical studies on social media's influence. Statistical data on social media usage and its societal impacts was provided by reputable institutions such as the Pew Research Center.\nThe influence of social media on public opinion became noticeable in the early 21st century with the advent of platforms like Facebook Twitter and YouTube. Events such as the Arab Spring (2011) and Occupy Wall Street (2011) highlighted the power of social media to mobilize people and spread ideas rapidly. The #MeToo movement which gained

momentum through a tweet by Alyssa Milano in 2017 exemplified how social media could catalyze significant social change by encouraging victims of sexual harassment to speak out (Thomson 2018).\nIn addition to social movements social media's influence extends deeply into the political sphere. Modern political candidates in America have recognized the necessity of maintaining a robust online presence. Platforms like Twitter and Facebook are not only used for engagement but also for major announcements policy declarations and real-time interaction with constituents. For instance former President Donald Trump famously used Twitter to communicate directly with the public and announce significant policy decisions bypassing traditional media channels (Heilweil & Ghaffary 2021). This direct communication method aligns with the principles of authentic leadership where transparency and direct engagement are paramount.\nAuthentic leadership as defined by Northouse (2019) is a process where an individual influences others to achieve a common goal through genuine and ethical behavior. This concept is mirrored in the actions of social media influencers who build trust and engagement with their followers through transparency and authenticity. Influencers and public figures like Tarana Burke and Alyssa Milano have utilized their platforms to lead movements such as #MeToo advocating for societal values of justice and accountability (Mendes et al. 2018). These influencers often exemplify the core components of authentic leadership by maintaining a transparent and genuine presence online fostering trust and loyalty among their followers. This trust is critical enabling influencers to mobilize their audience for various causes from social justice movements to political campaigns.\nSocial media acts as both a mirror and a mold for public opinion reflecting current sentiments and attitudes while simultaneously shaping those sentiments through disseminating information and mobilizing collective action. For instance during the 2016 U.S. presidential election social media significantly influenced voter perceptions through both authentic content and misinformation (Allcott & Gentzkow 2017). The economic implications of social media influence are also significant. Influencer marketing has become a multi-billion-dollar industry with brands leveraging influencers' reach and perceived authenticity to connect with consumers. According to a report by Business Insider Intelligence the influencer marketing industry is projected to grow to approximately $15 billion by 2022 (Business Insider Intelligence 2021).\nWhile social media holds the potential for positive influence it also poses risks. The spread of misinformation can polarize communities and disrupt democratic processes. The controversies surrounding the 2016 U.S. presidential election exemplify this risk where false information disseminated by social media influencers and bots significantly impacted voter perceptions and behaviors (Allcott & Gentzkow 2017). Moreover the influence of social media extends to mental health. Studies have shown that exposure to influencer content can impact self-esteem and body image particularly among young women. For instance Fardouly et al. (2015) found that Instagram use was associated with greater body dissatisfaction mediated by the internalization of the thin ideal and appearance comparison tendencies.\nThe role of social media in shaping and reflecting public opinions and attitudes is intricately linked with the principles of authentic leadership. Influencers who engage authentically with their followers can drive significant social change by promoting ethical behavior and communal values. As digital platforms continue to evolve understanding the mechanisms of this influence becomes crucial for harnessing social media's power for positive societal impact.\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 3: Literature Review\n\n[Literature Review Instructions: From the topic chosen for the Capstone project review and examine a

minimum of ten to fifteen sources related to surveying both theory and practice on the Capstone topic. Write a literature review synthesizing common themes amongst the reviewed sources. Follow the APA guidelines. This chapter should be 8-12 pages].\n\nSuccess Resources:\nWhat is a literature review? https://researchguides.uoregon.edu/litreview/synthesize#:~:text=About%20Synthesis&text=Combining%20elements%20of%20several%20sourcesnew%20ideas%20to%20existing%20knowledge\nHow to write a literature review\nhttps://www.youtube.com/watch?v=Vc_Yu_61Ymg\n\nSome themes that might be found in the research:\nExample topic: food shortage\nExample project: create a food resource flyer to post around local community\nSome themes that might be found in the research: how many people have a food shortage what communities struggle the most with food supply what is nourishing food what is a food resource how food resources get funded how food resources get food to share how restaurants might help how to volunteer what other communities/program could be used as a prototype to follow how to distribute flyers how to create informative flyers how to create engaging flyers etc.\nCHAPTER 4: Solutions\n[Project Goal]\n[In chapters one through three the field/topic/problem that deserves attention and carries social significance was defined and described. Both theory and practice were explored through the research in the literature review. With these chapters and any conversations with mentors in mind carefully craft a narrative that addresses the change (campaign initiative resource) being proposed.\nExplain briefly what this change is and why this change should take place. If a research question(s) is appropriate for the project please provide it/them. This section will include 3-5 pages that provide the process of the solution being proposed to implement.\nThis section must include research explaining why this solution is the best course of action. Examples might include training website blog Wiki page social media campaign evaluation process and rubric organizational philosophy mission/vision/values statement course syllabus webinar etc.] \n[Implementation]\n[Drawing from the goals narrated upload fully developed materials that would be used in implementation of the proposed solution. This might include video PowerPoint training manual quizzes handouts links etc. This is a substantial portion of the project and these materials should address how the proposed solution will be implemented from start to finish.\n[Project Measurements]\n\t[In this section describe what is being measured and what methods will be used to measure the success of the proposed project. In the design of the project plan think about how to measure successes/failures of the proposed solution. Once it\u2019s determined what to measure explain how to measure them. Like the section above this project proposal illustrates the researcher\u2019s expertise and informed process: explain what elements are being measured and why they are being chosen to measure; what is being measured and the methods being used to measure the project\u2019s outcome. Share the logic and thought process behind the measurements of the project.]\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\n\nCHAPTER 5: Reflections and Recommendations\nProject Summary\n\t[Briefly summarize the goal for the project the actions that were taken and the results realized.]\nReflections\n[Reflect on the project in its entirety. What was learned? What were the highest moments of the research process? What were the lowest moments? If the project moves forward provide recommendations for change. Discuss the strengths and weaknesses of the project.]\nRecommendations/Conclusions \n[What would be the next steps from this project? What are some recommendations for future researchers? How would the next researcher address the weaknesses of the project? Would the project be scalable? How so?? What would that look like? What is the likelihood on the

sustainability of this project?]\n\n\nReferences\nAllcott H. & Gentzkow M. (2017). Social Media and Fake News in the 2016 Election. Bibliography\nBERKOVICH I. (2014). Between Person and Person: Dialogical Pedagogy in
Authentic Leadership \tDevelopment. Academy of Management Learning & Education
13(2) 245\u2013264. Business \tSource Elite. <LINK>
http://search.ebscohost.com/login.aspx?
\tdirect=true&db=bsh&AN=96695857&site=ehost-live\nBerkovich (2010)
suggests that dialogical pedagogy can be used to develop authentic leadership. He
examines and critiques common approaches and ideas held in the academic community
regarding authentic leadership theory. The author goes on to summarize and discuss
current approaches to authentic leadership development. Berkovich (2010) identifies
and discusses the central focus \u2018narrative identity processing\u2019 and
\u2018dramaturgical enactment\u2019 of two of the foremost didactic methods for
authentic leadership development. He then suggests a new perspective based in
dialogical philosophy and sets about describing a proposed framework for dialogical
pedagogy in authentic leadership. Berkovich (2010) identifies eight areas of
dialogical pedagogy which are useful in authentic leadership development: care contact
critical thinking empathy mutuality open-mindedness respect and self-exposure.
Finally the article evaluates and critiques the use and outcomes of using dialogical
pedagogy in authentic leadership development initiatives.\n\tThe source was useful in
that the author first defined his view of the current perspectives in authentic
leadership before exploring a new perspective. The author discusses the foundations
and mechanics of dialogical pedagogy in an in-depth manner which is helpful in
understanding the overall purpose and ideas set forth in the article. The article is
from a peer reviewed scholarly journal and is found easily through a simple search in
EbscoHost through the university\u2019s library.\nBlekkingh B. W. (2015). Authentic
Leadership: Discover and Live Your Essential Mission. Infinite \tIdeas; eBook
Collection (EBSCOhost). \t <LINK>
http://search.ebscohost.com/login.aspxdirect=true&db=nlebk&AN=987184&site=
ehost-live\nThis e-book explores the ideas present in authentic leadership theory with
the intent to use them as a tool for discovering ones purpose. Blekkingh (2015)
approaches his topic through a seven layer model which he postulates is the framework
of all human beings. These seven layers in chapter discussion order are: environment
behavior skills norms ego values and authenticity. The initial seven chapters are each
focused on one of these layers and the problems associated with each layer. Blekkingh
(2015) suggests that through this layered self reflection one is enabled to find their
authentic self and their purpose. He presents the idea that this once an individual is
aware of their authentic self and purpose they will be able to \u201cput Authentic
Leadership into effect\u201d (Blekkingh 2015 p. x). Finally he concludes the book
with resources for further exploration and includes a lengthy appendix that functions

as kind of encyclopedia with supplemental materials.\n\tThe author is a credible source in the field of authentic leadership theory due to his work as both an authentic leadership lecturer at a Dutch university and as one of the founders of a consultancy firm centered around the tenets of authentic leadership. One failing of the book as Authentic Leadership resource is that many of the examples in the book are mainly anecdotal and lack an academic or scientific robustness. In contrast the authors simple language and engaging exercises make his ideas and pedagogy easily understood and applicable to anyone.\nGardner W. L. Avolio B. J. Luthans F. May D. R. & Walumbwa F. (2005). \u201cCan you see the real \tme?\u201d A self-based model of authentic leader and follower development. Leadership Quarterly \t16(3) 343\u2013372. Business Source Elite. \n\t <LINK> http://search.ebscohost.com/login.aspx <LINK> ?direct=true&db=bsh&AN=17426678&site=ehostlive\nGardner et al. (2005) contend that \u201cthe purpose of this article is to further develop and extend an emerging theory of authentic leadership development\u201d (p. 344). The authors begin by defining their interpretation of the constructs of authenticity authentic leadership and authentic followership. Gardner et al (2005) then discuss a conceptual authentic leadership framework for leader and follower development. Gardner et al (2005) propose what they describe as a \u201cself-based model of the developmental processes for authentic leadership and followership\u201d (p. 348). This model sets forth the idea that a leader\u2019s personal history is the catalyst for authentic leadership development (Gardner et al. 2005). The authors identify self-awareness and self-regulation as two fundamental components of authentic leadership development and they discuss both these concepts in depth. Also at the heart of this article is the idea that authentic leaders are positive role models for followers and consistently model authentic behavior balanced processing self-awareness and transparency.\n\tThis article is a valuable resource in examining authentic leadership theory because it examines authentic leadership development using a reflective perspective which looks at the roles of both the leader and follower. The authors also clearly and succinctly define the various components of their authentic leadership model. One area for critique is that the authors don\u2019t provide any concrete examples of the outcomes they predict making the subject matter of the article entirely theoretical. \nHsieh C.-C. & Wang D.-S. (2015). Does supervisor-perceived authentic leadership influence \temployee work engagement through employee-perceived authentic leadership and employee \ttrust? International Journal of Human Resource Management 26(18) 2329\u20132348. Business \tSource Elite. <LINK> http://search.ebscohost.com/login.aspx <LINK> ? <LINK> \tdirect=true&db=bsh&AN=108302656&site=ehost-live\nThis journal article reports the findings methodology and initial hypothesis of a study concerning authentic leadership. The study focuses on the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective. Hsieh & Wang (2015) made four distinct hypothesis concerning employee and supervisor perceptions of authentic leadership and its mediatory relationship with employee trust and engagement. The study sample was taken from the responses of 77 supervisors and 345 employees from 36 of Taiwan\u2019s best performing companies (Hsieh & Wang 2015). The results of the study were quantified using study participants questionnaire responses which were then converted to statistical data and applied to a hierarchical linear model. Using this data the authors were able to conclude that \u201csupervisor-perceived authentic leadership has a fully mediating influence on employee work engagement through employee trust\u201d (Hsieh & Wang 2015 p. 2341).\n\tThis study is a valuable

resource for authentic leadership theory because of its use of statistical data. The presentation of quantifiable results gives greater credibility to the authors\u2019 conclusions. Hsieh & Wang\u2019s (2015) presentation of their authentic leadership research hypothesis test and findings present a clear picture of the application of authentic leadership and its probable outcomes.\nKerfoot K. (2006). Authentic Leadership. Dermatology Nursing 18(6) 595\u2013596. Academic Search \tElite. <LINK> http://search.ebscohost.com/login.aspx?direct=true&db=afh&AN=23659813&site=ehost- \tlive\nThis peer-reviewed journal article discusses authentic leadership development in the context of the nursing profession. Kerfoot (2006) presents the idea that leader authenticity cannot be self-defined it lies only in the perception of followers. The author also suggests that authenticity may be a character trait but then postulates that through mentoring and confidence one can create the perception of authenticity as a leader (Kerfoot 2006).\n\tThis composition clearly defines the author\u2019s idea of authentic leadership and its importance. While the article does state several arguable conjectures they are all supported by the cited references from other credible sources. This article is relevant and helpful to any authentic leadership research in that it gives context to\u2014and an application of\u2014authentic leadership theory in a specific profession.\nMehmood Q. Hamstra M. R. W. Nawab S. & Vriend T. (2016). Authentic leadership and followers\u2019 \tin-role and extra-role performance: The mediating role of followers\u2019 learning goal orientation. \tJournal of Occupational & Organizational Psychology 89(4) 877\u2013883. Business Source Elite. \t <LINK> http://search.ebscohost.com/login.aspx?direct=true&db=bsh&AN=119180634&site=ehost-live\nThis article presents the findings of a research study concerning authentic leadership. Specifically the study examined the role of authentic leadership on employees developmental goals and the correlation between supervisor authentic leadership and employee performance (Mehmood et al. 2016). The authors put forth three distinct hypothesis which predict that authentic leadership positively predicts followers learning goal orientation and indirectly positively predicts followers performance and engagement. The study sample of participants included 115 supervisors and 345 employees in the Pakistani Telecommunications sector (Mehmood et al. 2016). Similar to the study conducted by Hsieh & Wang (2015) a questionnaire and statistical data was used to quantify the results. Mehmood et al. (2016) were able to conclude there is \u201cevidence that authentic leadership predicts followers' in\u2010role performance and civic virtue extra\u2010role performance through followers' LGO\u201d (p. 882).\n\tThis article is a credible source due to being published as part of peer-reviewed scholarly journal. Additionally the presentation of quantifiable results lends greater credibility to the authors conclusions. One criticism of this source is that it does not discuss much of the research that the authors conducted in authentic leadership theory before they arrived at their hypothesis. The authors site an extensive list of credible sources from which they formulated their ideas but it may have been helpful for them to be more in-depth. \nQian J. Yang F. & Han Z. R. (2016). The Influencing Mechanisms of Authentic Leadership on \tFeedback-Seeking Behaviour: A Cognitive/Emotive Model. Current Psychology\u202f: A Journal for \tDiverse Perspectives on Diverse Psychological Issues 35(3) 478\u2013485. WorldCat.org. \t <LINK> https://doi.org/10.1007/s12144-015-9316-z\nThe article suggests that a key influencing mechanism on feedback-seeking behavior in the leader-follower dyadic relationship is through followers cognitive and

emotive processes. This composition describes how authentic leadership and employees\u2019 cognitive and emotive perspectives influence feedback-seeking behaviors. Qian et al. (2016) argue \u201cthat authentic leadership influences feedback seeking indirectly through employees\u2019 perceptions about value and cost\u201d (p.4 82). They also put forth a model where authentic leadership correlates with employee positive emotions thereby indirectly fostering feedback-seeking behavior (Qian et al. 2016).\n\tThe article provides a focused view of authentic leadership and how it correlates with feedback-seeking behaviors. The authors cite an extensive amount of credible sources and literature to support their claims but at times this may cause a reader to get the sense that they\u2019re not putting forth any new ideas. One criticism of the composition is that due to its focused view some portions of the article seem almost redundant.\nRego A. Vit\u00f3ria A. Magalh\u00e3es A. Ribeiro N. & e Cunha M. P. (2013). Are authentic leaders \tassociated with more virtuous committed and potent teams? The Leadership Quarterly 24(1) \t61\u201379. <LINK> https://doi.org/10.1016/j.leaqua.2012.08.002\nThis peer-reviewed article concerns a study which examines how authentic leadership predicts team potency both directly and indirectly. Rego et al. (2013) suggests that authentic leadership alone \u201cis not sufficient to achieve positive team outcomes\u201d (p. 62). The authors assert that team affective commitment and team virtuousness may also be a link between authentic leadership and team potency. Therefore the study also explores the mediatory role of team affective commitment and virtuousness. The study was conducted at a Portuguese university with 59 teams of sizes ranging from 4-21 members. Similar to the study conducted by Hsieh & Wang (2015) as well as Mehmood et al. (2016) a questionnaire and statistical data was used to quantify the results. Rogo et al. (2013) were able to conclude that \u201cthe findings suggest that AL [authentic leadership] predicts team potency via the mediating role of team virtuousness and team affective commitment\u201d (p. 75).\n\tMany of the studies which concern themselves with the effects of authentic leadership focus on individual follower outcomes. This study is rare in that is examines the effects of authentic leadership on group outcomes. This rarity makes it an exceptional resource for authentic leadership theory research. The authors described the concepts of authentic leadership which lead to their hypothesis in detail which provided ample supplementary information on their study topic. As with the studies conducted by Hsieh & Wang (2015) as well as Mehmood et al. (2016) the presentation of quantifiable results lends greater credibility to the authors conclusions. \nShapira-Lishchinsky O. (2014). Toward developing authentic leadership: Team-based simulations. \tJournal of School Leadership 24(5) 979+. Gale Academic OneFile. <LINK> https://link-gale-\tcom.claremontlincoln.idm.oclc.org/apps/doc/A424532388/AONE\tu=clar94421&sid=bookmark-AONE&xid=f96c90b3\nThis peer-reviewed article concerns a study conducted \u201cto identify whether principal trainees can develop authentic leadership through processing decisions that they or their peers made in TBSs [team based simulations] of ethical cases that they or their peers had experienced\u201d (Shapira-Lishchinsky 2014 p. 987) in the educational field. The study found that there were 2 main advantages of TBSs: TBSs create a supportive environment to learn from participant mistakes and TBSs heightened educational leader awareness of their caring responsibilities. Shapira-Lishchinsky (2014) was able to conclude that TBSs provide a framework for ethical discussion but did not ever establish a firm correlation between authentic leadership development in educational leaders and TBSs.\n\tAlthough this study is peer reviewed its results were not

presented in the form of quantifiable data. While the study did include detailed research relating to authentic leadership and also clearly stated its methodology ultimately it is not the best resource for the study of authentic leadership theory. It does however provide ample information and examples which could be correlated with authentic leadership theory through conjecture and deduction.\nWulffers T. (2017). Authentic Leadership Effectiveness for Individuals and Teams: A Coaching \tApproach. KR Publishing; eBook Collection (EBSCOhost). \t <LINK> http://search.ebscohost.com/login.aspx?direct=true&db=nlebk&AN=1595178&site=ehost-live\nWullffers (2017) begins by commenting on the state of leadership today and also examining the consequences of poor leadership. The author cites authentic leadership theory as a key method for achieving a better quality of leadership. Wullffers (2017) states that \u201cauthentic leaders are leaders who know who they are and who are true to themselves\u201d (p. 7). The book examines what authentic leadership is from a scholarly perspective and cites multiple literary works concerning the mechanisms of authentic leadership. The author then examines the components and methodologies of authentic leadership development. Wullffers (2017) describes leader authenticity as a spectrum with \u201cleadership development levels of maturity that shape the moral and cognitive capacities\u201d (p. 57) of leaders. The author then goes on to discuss how leaders may navigate up developmental levels. Finally Wulffers (2017) examines well known leaders through the lens of authentic leadership (p. 208).\n\tWhile the author does make some assertions this book functions mainly as an extended case study and detailed manual on how to achieve leader authenticity. The author heavily references previous literature on authentic leadership theory as well as her own experiences to formulate her ideas. The book includes several appendices and end-notes which enhance its usefulness in authentic leadership theory research. Wullffers is also lent a greater credibility through endorsements and reviews by industry leaders.\n\n\n\n\t\n\n\n[URL: ""https://doi.org/10.1016/j.leaqua.2005.03.001""]\n[URL: "direct=true&db=bsh&AN=96695857&site=ehost-live""]\n[URL: "direct=true&db=nlebk&AN=987184&site=ehost-live""]\n[URL: ""http://search.ebscohost.com/login.aspx""]\n[URL: ""http://search.ebscohost.com/login.aspx?direct=true&db=bsh&AN=17426678&site=ehost-live""]\n[URL: ""http://search.ebscohost.com/login.aspx""]\n[URL: ""http://search.ebscohost.com/login.aspx?direct=true&db=bsh&AN=108302656&site=ehost-live""]\n[URL: ""http://search.ebscohost.com/login.aspx?direct=true&db=bsh&AN=108302656&site=ehost-live""]\n[URL: "live""]\n[URL: ""http://search.ebscohost.com/login.aspx?direct=true&db=bsh&AN=119180634&site=ehost-live""]\n[URL: ""https://doi.org/10.1007/s12144-015-9316-z""]\n[URL: ""https://doi.org/10.1016/j.leaqua.2012.08.002""]\n[URL: """"]\n[URL: ""http://search.ebscohost.com/login.aspx?direct=true&db=nlebk&AN=1595178&site=ehost-live""]", "title": "annotated bibLL-1.docx", "tether_id": null}, "status": "finished_successfully", "end_turn": null,

In this world of uncertainty where workers are demanding greater accountability and morality from their leadership the need for authentic leadership is undeniable. Indeed this demand people feel to be led by those purpose-driven individuals with strict moral compasses is evident. \nAlthough authentic leadership is still nascent in its philosophy (Northouse 2019) many of the greatest minds in academia commerce and even science have written literature studying hypothesizing and postulating on its methodology application and efficacy. For example Gardner et al. (2005) Berkovich (2010) and Qian et al. (2016) sought to examine the methodology and social mechanisms by which authentic leadership operated while Rego et al. (2013) Shapira-Lishchinsky (2014) Hsieh and Wang (2015) and Mehmood et al. (2016) tested its efficacy and application. Even outside of academia experts have found the topic of authentic leadership compelling. For instance both Blekkingh (2015) and Wulffers (2017) have written entire books dedicated to the question of how to find your purpose and achieve authenticity while Kerfoot\u2019s (2006) application of authentic leadership theory in nursing is brilliant in its simplicity! \nThis paper will summarize critique and evaluate each of the literary works referenced in turn. Furthermore each literary work will be critiqued on the basis of its academic robustness or usefulness to research concerning authentic leadership. Finally this treatise will examine the credibility of the authors and their writing concerning the subject matter on the whole.\nLiterature Review\nAcademic Discourses on Leadership Theory and Methodology\nIn their article titled \u201c\u2018Can you see the real me?\u2019 A self-based model of authentic leader and follower development\u201d Gardner et al. (2005) contends that \u201cthe purpose of this article is to further develop and extend an emerging theory of authentic leadership development\u201d (p. 344). The authors begin by defining their interpretation of the constructs of authenticity authentic leadership and authentic followership. Gardner et al. (2005) then discuss a conceptual authentic leadership framework for leader and follower development. \n Gardner et al. (2005) propose what they describe as a \u201cself-based model of the developmental processes for authentic leadership and followership\u201d (p. 348). This model sets forth the idea that a leader\u2019s personal history is the catalyst for authentic leadership development (Gardner et al. 2005). In addition the authors identify self-awareness and self-regulation as two fundamental components of authentic leadership development and they discuss both these

concepts in depth. Also at the heart of this article is the idea that authentic leaders are positive role models for followers and consistently model authentic behavior balanced processing self-awareness and transparency.\n\tThis article is a valuable resource in examining authentic leadership theory because it examines authentic leadership development using a reflective perspective that looks at the roles of both the leader and follower. The authors also clearly and succinctly define the various components of their authentic leadership model. However one area for critique is that the authors do not provide concrete examples of the outcomes they predict making the article\u2019s subject matter entirely theoretical. \nAnother scholarly literary work concerning the exploration of authentic leadership theory and its methodology is an article by Berkovich titled \u201cBetween Person and Person: Dialogical Pedagogy in Authentic Leadership Development\u201d first published in the Academy of Management Learning & Education journal in 2014. Within this article Berkovich (2014) suggests that dialogical pedagogy can be used to develop authentic leadership. In addition he examines critiques and summarizes common approaches and ideas held in the academic community regarding authentic leadership theory and development. \nBerkovich (2014) identifies and discusses the two central focuses \u2018narrative identity processing\u2019 and \u2018dramaturgical enactment\u2019 of the main didactic methods for authentic leadership development. He then suggests a new perspective based on dialogical philosophy and outlines a proposed framework for dialogical pedagogy in authentic leadership. Berkovich (2010) identifies eight areas of dialogical pedagogy which he asserts are useful in authentic leadership development: care contact critical thinking empathy mutuality open-mindedness respect and self-exposure. Finally the article evaluates and critiques the use and outcomes of using dialogical pedagogy in authentic leadership development initiatives.\n\tBerkovich\u2019s (2014) discourses were helpful in that the author first defined his view of the current perspectives in authentic leadership before exploring a new perspective. The article discusses the foundations and mechanics of dialogical pedagogy in-depth which helps the reader understand the author\u2019s overall argument and ideas. \nIn contrast to the scholarly works by Gardner et al. (2005) and Berkovich (2014) the article titled \u201cThe Influencing Mechanisms of Authentic Leadership on Feedback-Seeking Behaviour: A Cognitive/Emotive Model\u201d published in 2015 by Qian et al. functions almost as both a long-form hypothesis and authentic leadership methodology model. The article suggests that a critical influencing mechanism on feedback-seeking behavior in the leader-follower dyadic relationship is through followers\u2019 cognitive and emotive processes. \nThis composition describes how authentic leadership and employees\u2019 cognitive and emotive perspectives influence feedback-seeking behaviors. Qian et al. (2016) argue \u201cthat authentic leadership influences feedback-seeking indirectly through employees\u2019 perceptions about value and cost\u201d (p.4 82). They also put forth a model where authentic leadership correlates with positive employee emotions thereby indirectly fostering feedback-seeking behavior (Qian et al. 2016).\n\tThe article provides a focused view of authentic leadership and how it correlates with feedback-seeking behaviors. The authors cite an extensive amount of credible sources and literature to support their claims but this may cause a reader to get the sense that they are not putting forth any new ideas. One criticism of the composition is that some portions of the article seem almost redundant due to its focused view.\nStudies on the Application Development and Effects of Authentic Leadership\nIn contrast to the other articles mentioned about authentic leadership studies this peer-reviewed journal

article by Rego et al. (2013) focuses on group outcomes. The study examines how authentic leadership predicts team potency both directly and indirectly. Rego et al. (2013) suggest that authentic leadership alone \u201cis not sufficient to achieve positive team outcomes\u201d (p. 62). The authors assert that team affective commitment and team virtuousness may also link authentic leadership and team potency. Therefore the study also explores the mediatory role of team affective commitment and virtuousness. The authors described the concepts of authentic leadership which led to their hypotheses in detail and provided ample supplementary information on their study topic.\nThe study was conducted at a Portuguese university with 59 teams ranging from 4-21 members. The results were quantified using questionnaires and statistical data. As a result Rogo et al. (2013) were able to conclude that \u201cthe findings suggest that AL [authentic leadership] predicts team potency via the mediating role of team virtuousness and team affective commitment\u201d (p. 75). As with many other studies referenced the presentation of quantifiable results lends greater credibility to the authors\u2019 conclusions.\nAs previously stated many of the studies which concern themselves with the effects of authentic leadership focus on individual follower outcomes. This study is rare in that it examines the effects of authentic leadership on group outcomes. This rarity makes it an exceptional resource for authentic leadership theory research. \nAnother noteworthy peer-reviewed article examining authentic leadership concerns a study conducted \u201cto identify whether principal trainees can develop authentic leadership through processing decisions that they or their peers made in TBSs [team based simulations] of ethical cases that they or their peers had experienced\u201d (Shapira-Lishchinsky 2014 p. 987) in the educational field. The study found two main advantages of TBSs: TBSs create a supportive environment to learn from participant mistakes and TBSs heightened educational leader awareness of their caring responsibilities. However while Shapira-Lishchinsky (2014) concluded that TBSs provide a framework for ethical discussion the author did not establish a strong correlation between authentic leadership development in educational leaders and TBSs.\n\tAlthough this study is peer-reviewed its results were not presented in the form of quantifiable data. Thus while the article did include a detailed analysis of authentic leadership theory and its methodology it is ultimately not the best resource for authentic leadership research. However many of the examples presented pertained to ethical moral dilemmas that could easily correlate with authentic leadership theory through conjecture and deduction.\nHsieh and Wang (2015) conducted another compelling study into the effects of authentic leadership in organizations. The study focused on the influence of authentic leadership on employee trust and engagement from a supervisor-employee perspective (Hsieh & Wang 2015). The study tested four distinct hypotheses concerning employee and supervisor perceptions of authentic leadership and its mediatory relationship with employee trust and engagement (H\nThe file is too long and its contents have been truncated.\n", "title": "literature review ll.docx", "tether_id": null}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"command": "context_stuff", "is_visually_hidden_from_conversation": true, "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "parent_id": "e91fc9db-f8da-4b33-b547-166867aff426", "request_id": "8ae42fb5d83b3744-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "e91fc9db-f8da-4b33-b547-166867aff426", "children": ["fab45f8e-e748-4116-bf22-44399f757bdf"]}, "fab45f8e-e748-4116-bf22-44399f757bdf": {"id": "fab45f8e-e748-4116-bf22-44399f757bdf", "message": {"id": "fab45f8e-e748-4116-bf22-44399f757bdf", "author": {"role": "tool", "name":

"myfiles_browser", "metadata": {}}, "create_time": 1722833674.140386, "update_time": null, "content": {"content_type": "text", "parts": ["\nPlease remember to search the user's documents if an answer to their question is not contained in the above snippets.\n"]}, "status": "finished_successfully", "end_turn": null, "weight": 1.0, "metadata": {"is_visually_hidden_from_conversation": true, "command": "prompt", "message_type": null, "model_slug": "gpt-4", "default_model_slug": "gpt-4", "pad": "AAA", "parent_id": "f12634de-0c8f-4051-9454-9620d5adc3a1", "request_id": "8ae42fb5d83b3744-MXP", "timestamp_": "absolute"}, "recipient": "all", "channel": null}, "parent": "f12634de-0c8f-4051-9454-9620d5adc3a1", "children": ["aef3d9df-2039-472c-a22b-26d4d35ea767"]}, "aef3d9df-2039-472c-a22b-26d4d35ea767": {"id": "aef3d9df-2039-472c-a22b-26d4d35ea767", "message": {"id": "aef3d9df-2039-472c-a22b-26d4d35ea767", "author": {"role": "assistant", "name": null, "metadata": {}}, "create_time": 1722833674.140503, "update_time": null, "content": {"content_type": "text", "parts": ["Based on the information from your documents and your project's focus, I'll help you reframe and enhance the literature review chapter for your capstone project on the theme of "Social Media as a Tool for Change and Mobilizer of Causes." This will include repurposing existing content and adding new sources related to the influence of social media in shaping public opinion and driving social change.\n\n### Drafting Chapter 3: Literature Review\n\n#### Engaging Introductory Paragraph\nLet's start with your request to use a specific statement as an opener. You mentioned wanting to use a specific sentence to open the chapter, but the full sentence wasn't provided. Assuming you're looking for a strong, thematic statement about social media's impact, here\u2019s a suggestion:\n\n"In the digital age, social media has emerged not merely as a platform for social interaction but as a powerful agent of change, influencing public opinion and mobilizing movements that span global boundaries. This chapter explores how these digital platforms, often underestimated in their early days, have now become central to modern activism and leadership."\n\n#### Structure of the Literature Review\n1. **Overview of Social Media Influence**\n   - Synthesize existing knowledge on how social media has been used to influence public opinion and mobilize support for various causes.\n   - Reference specific studies or statistics that illustrate the reach and impact of social media campaigns (e.g., Pew Research findings on social media's role in political engagement).\n\n2. **Theoretical Framework**\n   - Discuss the theories that explain why and how social media is effective in mobilizing causes and influencing change. This might include discussions of mass communication theory, network theory, and the concept of "viral" content.\n   - Reference academic theories or publications that have explored these dynamics.\n\n3. **Case Studies and Examples**\n   - Bring in detailed examples of successful social media campaigns. This could include movements like #MeToo, #BlackLivesMatter, or other significant social or political movements that have utilized social media effectively.\n   - Analyze the strategies used, the response from the public, and the outcomes of these campaigns.\n\n4. **Critical Perspectives**\n   - Discuss criticisms and challenges related to using social media for social change. This might include issues like misinformation, the digital divide, or the transient nature of online engagement.\n   - Include scholarly critiques and debates on the effectiveness and ethical considerations of social media activism.\n\n5. **Future Directions**\n   - Speculate on future trends in the use of social media for social activism.\n   - Discuss emerging technologies (like AI and machine learning) and their potential impact on social media-driven activism.\n\n6. **Conclusion**\n   - Summarize the key points discussed and reflect on the role of

social media in shaping future social and political landscapes.\n\n#### Adding New Sources\nTo enhance your literature review, consider adding recent studies or publications that have emerged since your last review. Look for:\n- Publications from 2021-2024 that discuss the evolution of social media influence on public opinion.\n- Recent case studies highlighting new social media platforms like TikTok and their unique role in social mobilization.\n- Scholarly articles or books that critically analyze the impact of social media post-major global events (like the COVID-19 pandemic).\n\n#### APA Guidelines\nMake sure your literature review adheres to APA guidelines:\n- Proper in-text citations and reference list formatting.\n- Clear, concise, and objective writing.\n- Adequate synthesis of sources, showing the relationships between different ideas and theories.\n\nThis structure will help you create a comprehensive literature review that not only synthesizes the existing body of research but also introduces fresh perspectives and recent developments in the field of social media and social change. If you need specific sources or further details on any of these sections, feel free to ask!"]}, "status": "finished_successfully","end_turn": true
